SPECIAL INTRODUCTION

THE history of Western Civilization begins in a conflict with the Orient, a conflict of which it maybe the end is not yet. But the routes between East and West have been trodden by the caravans of trade more often even than by the feet of armies. The treasures of the East were long brought overland to Alexandria, or Constantinople, or the cities of the Levant, and thence distributed to Europe by the galleys of Genoa or of Venice. But when the Turk placed himself astride the Bosphorus, and made Egypt his feudatory, new routes had to be found. In the search for these were made the three greatest voyages in history, those of Columbus, of Vasco da Gama, and—greatest of all—of Magellan.

In his search for the riches of Cipangu Columbus stumbled upon America. The great Genoese lived and died under the illusion that he had reached the outmost verge of Asia; and though even in his lifetime men realized that what he had found was no less than a new world, America

INTRODUCTION

was long looked on as an unwelcome obstacle of unknown extent across the path of the Eastern trader. Farther and farther men ranged the coast, seeking into every bay and estuary, in the vain hope that the South Sea might open to their gaze. To southwards, Magellan found a strait, but the journey was long and dangerous, and open only to the ships of Spain. To northwards France took up the search, and it was in quest of the Orient that Jacques Cartier put out from St. Malo. For a moment Chaleur Bay seemed to him the strait of his dream, but soon he came to its end, "whereof we were much torn with grief," he says in his quaint old French. On his next voyage he went in vain up the St. Lawrence as far as Montreal; but the terrors of a Canadian winter, with its attendant scurvy, and the still greater horrors of the Wars of Religion, for the next half-century restricted the French to fishing voyages to Newfoundland and the Gulf of St. Lawrence. With the Peace of Vervins and the Edict of Nantes in 1598, France had rest from foreign and civil strife, and turned again to the nobler task of exploration. This was the quest to which the sea-captain of Brouage, Samuel de Champlain, gave the

INTRODUCTION

best years of his life, "always travelling with an hungry heart," with the great South Sea ever a day's journey in advance. Tired at last, he gave himself up to establish on the rock of Quebec a station from which his successors might fare forth. In his search for the South Sea he had been the first great explorer of Canada, and this series of "Trail Makers of the North" appropriately begins with his undaunted name.

As the new world opened out, the search for the Orient took a second place. Even in the days of Champlain, his partners thought chiefly of trade with the natives, and in the next two centuries a series of great fur-trading companies, English and French, took toll of the country, and pushed ever farther west and north. Among these, too, there were great-hearted dreamers, men who "yearned beyond the sky-line where the strange roads go down," and of such was Alexander Mackenzie. His great voyage to the mouth of the mighty river which bears his name was made in 1789; four years later he had pierced the Rockies, and come out upon the shores of the Pacific; first of white men to cross the continent by land, the Highland Scot had made true the dream of Champlain.

INTRODUCTION

'As the West revealed its vastness, men gave themselves to its exploration. Another great fur-trader, indefatigable as Mackenzie, was the New Englander, Daniel Williams Harmon. If his voyages did less for geography, they tell us even more of the manners and customs of the old lords of the prairies, ere yet Canada had entered upon the experiment of seeking to make in the West a great civilization from the off-scourings of Europe.

To these records has been added "The Wild North Land," a journal of the youthful travels of the late General Sir William Butler. The record of his adventures adds hardly less than Harmon to our knowledge of a vanishing race, and also shows that in these later days the hardihood of the Celt is as cheery and as unflinching as in the day of Champlain and of Mackenzie.

To the travels of Mackenzie, Harmon and Butler I have contributed short introductions. That to the voyages of Champlain is by the late Professor Bourne of Yale, whose premature death is mourned by every student of early American history.

W. L. GRANT.

INTRODUCTION

SAMUEL DE CHAMPLAIN was the first explorer to make a detailed examination of the coast of New England and Nova Scotia and to prepare a full and accurate report of his observations. To him, likewise, we are indebted for our earliest exact accounts of the Indians of New England, eastern Canada and New York. To the Canadian he is more than the explorer and the acute observer of the native life; he is the founder of New France and at the same time the chief of its early historians. To the student of history to-day, in addition to all this, he stands forth as perhaps the ablest of the earlier makers of America, a leader of indefatigable energy and sterling character, a Frenchman who devoted his life to extending the name and power of France and the civilizing influences of the Church. His fame is impregably established and grows with the lapse of time and the extension of knowledge of his work.

In view of all these facts it is surprising that his writings have to so slight a degree

INTRODUCTION

been accessible to the English reader. His earliest account of the Indians of the St. Lawrence River region, published in Paris in 1604 under the title *Des Sauvages, ou, Voyage de Sammuel Champlain de Brouage faict en la France Nouvelle, l'an mil six cens trois*, was made English and published in *Purchas His Pilgrimes*, London, 1625. In 1859 the Hakluyt Society brought out an English version of his *Brief Discours des choses plus remarquables que Sammuel Champlain de Brouage à reconneues aux Indes Occidentalles au voiage qu'il en a faict en iceles en l'année mil V^c. IIII^{xx} XIX & en l'année mil Vi^c I (1598-1601)*, under the title *Narrative of a Voyage to the West Indies and Mexico, 1599-1602*. The original remained unpublished until 1870, when the Abbé Laverdière published his *Œuvres de Champlain*.

It was not until 1878, some 270 years after his exploration of the New England coast, that New Englanders and others unfamiliar with French could read the earliest descriptions of the shores since so rich in historic associations, whose picturesque variety of scenery and invigorating air have rendered them familiar and even dear to thousands of fortunate sojourners from every part of our country who have only

INTRODUCTION

this transitory connection with New England. In that year the Prince Society began the publication, under the learned editorial care of Reverend Edmund F. Slafter, of an English translation of all of Champlain's narratives of explorations on the New England coast, in New York, and in Canada down to the year 1617, when his activity in exploration gave place to efforts to build up Quebec. The translation was entrusted to a highly competent scholar, the late Charles Pomeroy Otis, at that time Professor of Modern Languages in the Massachusetts Institute of Technology. The translation, the editorial notes and the biography of Champlain by Mr. Slafter, formed a whole which was highly honorable to American scholarship and imposed lasting obligations upon every student of Champlain's career. Yet the edition was strictly limited and is now to be found only in the richer public or private collections of Americana. Equally scarce and expensive is Laverdière's collected edition of Champlain's works in the original.

It remains true, then, even after all the loving labors that Laverdière, Slafter and Otis have devoted to the publication and elucidation of Champlain's writings, that they are still a closed book to that rapidly

INTRODUCTION

growing body of readers who are interested in the original narratives of the explorers, the earliest observations of the Indians as yet uncontaminated by contact with Europeans, and the local history of New England and Canada. No more fitting addition, therefore, to 'The Trailmakers' Series could be made than a satisfactory popular edition of Champlain's own narrative of his explorations. In such an edition the translation should be both accurate and readable, and the notes should be as brief and clear as possible. To fulfill these requirements, the translator and the editor have made an earnest effort.

The Prince Society Edition of *Champlain's Voyages* contains translations: 1, of the narrative entitled, *Des Sauvages, ou, Voyage of Sammuel Champlain de Brouage faict en la France Nouvelle, en l'an mil six cens trois*, etc., i. e., the voyage of 1603, with its description of the Indians; 2, of the narrative of 1613, entitled, *Les Voyages du Sieur de Champlain Xaintongeois, Capitaine ordinaire pour le Roy en la Marine, Devisez en deux livres, ou Journal tres-fidele des Observations faites és descouvertes de la Nouvelle France; tant en la description des terres, costes, rivières, ports, havres, leurs hauteurs et plusieurs decli-*

INTRODUCTION

naisons de la guide aymant; qu'en la creance des peuples, leur superstitions, façon de vivre & de guerroyer, etc., Paris, MDCXIII; 3, Quatriesme Voyage du Sr de Champlain, Capitaine ordinaire pour le Roy en la Marine & Lieutenant de Monseigneur le Prince de Condé en la Nouvelle France, fait en l'année 1613 (2 and 3 were published in the same volume in 1613); and 4, Voyages et Descouvertes faites en la Nouvelle France depuis l'année 1615, jusques à la fin de l'année 1618. Par le Sieur de Champlain, Capitaine ordinaire pour le Roy en la mer du Ponant, Paris, 1619.

As the authorities of the Prince Society were unwilling to consent to have their translation reissued in a popular form, two courses were open for those who had in hand the preparation of a popular edition: either these narratives could be translated over again without the expectation of making any considerable improvement on Mr. Otis's work, or an English version could be undertaken of that portion of Champlain's own final edition of his works which relates to his explorations. This final edition was published in 1632 under the title: *Les Voyages de la Nouvelle France Occidentale dicte Canada, faits par le Sr de Champlain Xainctongeois, Capitaine pour le Roy en la*

INTRODUCTION

Marine du Ponant & toutes les Descouvertes qu'il à faites en ce pais depuis l'an 1603, jusques en l'an 1629, etc. The latter course was chosen, for two reasons. First, this compilation, although hastily prepared, is in a very definite sense a revised and final edition by the author of his earlier publications. This is shown by the frequent corrections in estimates of distances and in the character of the omissions. Second, in this edition Champlain appears not only as a narrator of his own explorations, but as the historian of the earlier French discoveries and as the earliest French writer on colonization. His criticisms and judgments on the various aspects of the colonial experiments that he records help us to understand his point of view and the French point of view in regard to a number of important questions of colonial policy in regard to which the English practice was different.

The narrative of 1632, then, contains all the essentials of the earlier narratives, arranged in a systematic historical form, and, in addition, a sketch of the earlier French explorations and many interesting reflections on colonial policy. It is true the Abbé Laverdière was inclined to think that this narrative was edited by a hand unfriendly to the Recollect friars and favorable to the

INTRODUCTION

Jesuits, because so many particulars related to the Recollects in the earlier narratives are omitted in the narrative of 1632. I have examined each omission and am convinced that this conclusion is erroneous. In dovetailing several narratives of successive voyages into a history, Champlain had it in mind to present a continuous story of explorations, and he omitted details unessential for that purpose. A very competent scholar who has made extensive critical researches into the early literature of New France writes of this opinion of Laverdière, "I cannot find any grounds for accepting it."¹

Again, the statement in the preface to the translation in the Prince Society edition, I, 219, that the narrative of 1632 "is an abridgement, and not a second edition in any proper sense. It omits for the most part personal details and descriptions of the manners and customs of the Indians, so that very much that is essential to the full comprehension of Champlain's work as an observer and explorer is gone," is most misleading and can only be accounted for on the ground that the writer had not care-

¹ See H. P. Biggar, *The Early Trading Companies of New France*, 279-280, where the case is gone into in some detail.

INTRODUCTION

fully studied the 1632 edition, and had been unduly influenced by the summary way in which Champlain treated the voyage of 1603. In the present edition attention is called in the notes to nearly all the cases where the narrative of 1632 omits interesting details found in the earlier narratives.

The voyage of 1603 is very briefly recounted in this final narrative to avoid needless repetition. The geographical features of the St. Lawrence were more fully and accurately described in Champlain's later voyages, and his observations upon the Indians in 1603, so far as they were confirmed by later study, he incorporated with his later descriptions.

In this edition, however, it has been thought best to include Purchas's version of the voyage of 1603, even at the risk of some repetition, in order to place before the modern reader Champlain's first impressions, unrevised, of the Indians of the St. Lawrence, and the geographical details of this first voyage, especially when it could be done in so fine an example of early seventeenth century prose. This will be relished, I am sure, not only for its own beauty, but also because it lends Champlain's story the antique flavor which his own writing has for the modern Frenchman.

INTRODUCTION

The translation of that part of the 1632 edition of Champlain's *Voyages* here given (Laverdière, *Voyages*, 1632, I, pp. 1-309) was undertaken by my wife, who devoted herself assiduously to the task. As editor, I have gone over the text, carefully comparing it with the original for verification and occasional revision. That it is entirely free from misconceptions or mistakes cannot be expected, nor will such expectations be entertained by any who have had experience in preparing translations. We have, however, made especial efforts to reduce such slips to the minimum.

In the preparation of the translation much help was derived from Mr. Otis's work, but in the same way that a translator to-day of Herodotus or Thucydides could and would legitimately be aided by the versions of Rawlinson or Jowett. As the texts used by Mr. Otis and by Mrs. Bourne are often almost identical for pages at a time, the versions unavoidably have much in common. For innumerable French sentences in direct narrative prose there is a natural English equivalent that would occur to independent translators in substantially identical form. In such cases, to give a studiedly varied form of expression would be most unprofitable, and such a practice would

INTRODUCTION

place a progressively heavy handicap on each successive translator.

In preparing the notes, the voluminous commentaries of the Abbé Laverdière and Mr. Slafter have been freely drawn upon, but in most cases the source of the note has been indicated by the initial L. or S. Help has also been derived from Dr. Samuel E. Dawson's valuable *History of the St. Lawrence Basin* and from Professor Ganong's admirable monograph on *Dochet (St. Croix) Island* (Transactions of the Royal Society of Canada, 2d Ser., VIII, sec. IV, 127-231), and also from Professor Ganong's *Champlain's Narrative of the Exploration and First Settlement of Acadia* (Acadiensis, IV, 179-216). That every modern student of Champlain's career owes a debt to Francis Parkman, both for kindling his interest and extending his knowledge, goes without saying.

The proper purposes of an Introduction to this edition of Champlain's *Voyages* would not be met without a sketch of the great explorer's life.

Samuel Champlain was born at Brouage, a small seaport town in the old province of Saintonge, southeast of Rochefort and opposite the island of Oléron, about the year 1567. The once excellent harbor has long

INTRODUCTION

since been filled in by the sea, and the little peasant village now lies nearly two miles inland. Although Champlain was interested from early youth in the art of navigation, his first known voyage was one to Spain in 1598 with his uncle, who was in command of a French ship chartered by the Spanish authorities. Early in 1599, Champlain was given command of this ship for the voyage to the West Indies and New Spain with the annual fleet. His observations on this voyage, which lasted two years, he recorded in his *Brief Discours des Choses plus remarquables . . . reconneues aux Indes Occidentallas*, the earliest French account that we have of New Spain. To this journey may be safely attributed the beginnings of Champlain's interest in colonization, and through it he alone of all the great leaders in the colonization of North America had the privilege of observing and studying a European colony before he tried to found one. Soon after his return to France, Champlain was enlisted by Aymar de Chastes, the Governor of Dieppe, to make a reconnoissance of the St. Lawrence in company with the merchant and fur trader, Francis Gravé, Sieur du Pont, a citizen of the Breton seaport, St. Malo. De Chastes had secured a patent from King Henry IV.

INTRODUCTION

and had formed a trading company under whose patronage a settlement was to be made on the St. Lawrence. Champlain and Pontgravé (as he is more commonly called) explored the St. Lawrence as far as the rapids above Montreal, and later the country about Gaspé. Champlain's account of this voyage, published in 1604, he entitled, *Des Sauvages, ou Voyage de Samuel Champlain de Brouage, fait en la France Nouvelle l'an mil six cens trois*. This is the earliest detailed description we have of the Algonquin Indians of eastern Canada.²

When Champlain and Pontgravé returned they learned that De Chastes had died. His place as the promoter of a French colony in the New World was taken by Pierre du Gua (or Guast), Sieur de Monts, and the site selected was the milder region to the south of the mouth of the St. Lawrence. De Monts secured a charter from Henry IV

²See vol. II, pp. 151-229. The attention of the reader may here be called to the fact that while the English followed the Spanish usage started by Columbus, of calling the aborigines of the New World "Indians," i. e., people of the Indies, the early French writers adopted the simple descriptive name of *Sauvages*, which, in the seventeenth century, had the primary meaning "wild," e. g., as in *herbes sauvages*, "weeds," or the English, "wild animals."

INTRODUCTION

similar to the later English proprietary charters, which granted him all the region between the fortieth and forty-sixth degrees of north latitude, or from Philadelphia to Cape Breton Island.³ De Monts was also granted the monopoly of the fur trade from Tadoussac southward. It is not necessary here to go into the history of this enterprise which provided Champlain the opportunity to make the first careful exploration of the coast of Nova Scotia and New England. After following the shore line of Nova Scotia round into the Bay of Fundy and exploring its more sheltered waters, De Monts and his associates selected Dochet Island in the St. Croix River as the most suitable place for their settlement, in July, 1604. During August and September, Champlain explored the coast of Maine as far west as Monhegan Island, almost to the mouth of the Kennebec, when prudence dictated a return to the settlement. A winter of tragic misery bereft the little colony of half its numbers, and in June, 1605, De

³ De Monts's charter is given in English translation in the *Maine Hist. Soc. Collections*, 2d series, VII, 2-6. Three years later James I of England granted the Plymouth Company the right to establish a colony in the same region, completely ignoring the prior grant of the French king and the rights of De Monts under it.

INTRODUCTION

Monts, encouraged by the return of his associate, Poutrincourt, with supplies, undertook a further exploration of the coast to find a more desirable location for the colony. The new ground covered in this reconnoissance was the shores of Maine, New Hampshire and Massachusetts, around Cape Cod as far as Nauset Harbour. In this region, in August, 1605, came their first clash with the Indians. Upon their return to the St. Croix, the explorers found that Pontgravé had arrived from France with reinforcements. It was then decided to remove the colony across the Bay of Fundy to the more sheltered location of Annapolis Basin. It was now given the name Port Royal. In the fall De Monts returned to France.

In September, 1606, another attempt was made, this time by Poutrincourt and Champlain, to find a more favorable site for the colony. So much of the time at their disposal, however, was consumed in following, contrary to Champlain's advice, along the coast already explored, that the only real addition to their previous exploration was the short stretch from Nauset Harbour to Wood's Hole, where they gave the name of River Champlain to the tidal passage; a name which should be restored to that tortuous channel, as a memorial of the ex-

INTRODUCTION

plorer, to mark the limit of his explorations in New England, and to remind the thousands who pass the spot every summer of his services to American history and geography. In 1607, De Monts's monopoly of the fur trade was taken away, and the colony had to be given up for lack of resources to meet expenses. After a brief exploration of the Basin of Mines, Champlain and his fellow-colonists returned to France, arriving at St. Malo, October 1, 1607.

From this time the scene of Champlain's labors and plans for a New France is the St. Lawrence Basin. In April, 1608, he set sail for Canada in company with Pont Gravé, to carry on the further exploration of the St. Lawrence as the lieutenant of De Monts, to whom King Henry IV granted a monopoly of the Indian trade for one year, to meet the expenses of the expedition. After a brief excursion up the Saguenay, Champlain began the voyage up the St. Lawrence from Tadoussac, June 30, 1608. The foundations of a settlement at Quebec were laid on July 3. Hardly was this work begun when Champlain was apprised of a plot to murder him and sell the new station to the Basques. The ringleader was hanged and three accomplices were sent to France for punishment when Pont Gravé returned

INTRODUCTION

in September. The first winter at Quebec was a repetition of the cruel hardships which Cartier had suffered there. Ten of the little company died of scurvy and five of dysentery. Of the miseries to which the Indians were reduced in the long Canadian winter, Champlain has given a most vivid picture.

In the summer of 1609, Champlain, to cement his friendship with the Algonquins, which he regarded as an indispensable requisite for a successful settlement at Quebec, joined in one of their war parties against the Iroquois. They proceeded up the St. Lawrence to the mouth of the Richelieu, which was then followed to the beautiful lake to which Champlain gave his own name after a victorious encounter with the Iroquois at Ticonderoga. In September, 1609, Champlain returned to France to report to De Monts and to the King.

The early spring of 1610 found him again on his way to New France, where he again joined a war party against the Iroquois, who were ensconced in a barricade at the mouth of the Richelieu. His reasons for such participation in these Indian wars he gives at length in his narrative. This year saw no new exploration, and Champlain returned to France in the fall.

INTRODUCTION

In the spring of 1611, after his arrival in Canada, Champlain went up the St. Lawrence to Montreal to meet the band of Algonquins with whom he had left, for the winter, one of his men, presumably Etienne Brulé, to make observations. On this occasion Champlain had the thrilling experience of shooting the Lachine Rapids in a canoe. He was the second European to accomplish this feat, in which he was anticipated only by Brulé a few days earlier. In August, 1611, Champlain returned to France, where he remained until 1613, when he undertook one of his most important explorations, that up the Ottawa to verify the reports of the mendacious voyageur named Nicholas de Vignaud, who asserted that he had been to the sea on the north (Hudson Bay). The incident of the discovery of De Vignaud's deceit is one of the most dramatic in Champlain's narratives. Although he was profoundly disappointed not to reach the sea, as he had hoped, he explored the Ottawa beyond the site of the present city of that name, as far as Allumette Island, and made some of the most interesting observations of Indian manners and customs that his works contain.

During these years the work of the explorer was constantly impeded by the con-

INTRODUCTION

tending interests of rival fur traders. Champlain felt that the only practical way to deal with the Indians and to advance the interests of a settlement was through the agency of a responsible monopoly, and that free, unregulated competition in dealing with Indians by rival traders would be demoralizing to all concerned. On the other hand, every grant of a monopoly called forth a storm of protests and accusations from the traders not admitted to these privileges, which, they asserted, should belong to all Frenchmen in common. The year 1614 Champlain spent in France, trying to adjust these matters and arranging for the establishment of missions among the Indians. In April, 1615, he set sail for New France with four Recollect friars, who thus began one of the most wide-reaching and imposing missionary enterprises of modern times.

It was an eventful year also in Champlain's experience, for it was marked by the discovery of Lake Huron and Lake Ontario, an attack on the Iroquois in central New York, and a winter in an Indian village. Following his route of 1613, up the Ottawa, he continued his exploration westward to Lake Nipissing and thence to the shores of Lake Huron. The Huron In-

INTRODUCTION

dians that he found in this region, familiar now to many holiday-seekers as the Muskoka Lake country, were planning an expedition against one of the home strongholds of the Iroquois, far to the south, across Lake Ontario. Champlain embraced the opportunity to accompany them to see something of the region which the Dutch fur traders were penetrating by way of the Hudson. The attack upon the Iroquois fort, which was situated not many miles from the present city of Syracuse, was repulsed, owing to the flighty, undisciplined fighting of the assailants, whom Champlain in vain tried to steady. The lateness of the season precluded his being accompanied to Quebec, and he had to spend the winter with the Indians. He joined in their fall hunting, and during four tedious months he had an unequalled opportunity to study Indian life as yet uncontaminated by association with Europeans. Of their villages, preparation of food, marriage customs, funeral ceremonies, religious usages, their pow-wows and medicine men, he has given us not only one of the earliest, but one of the best descriptions that we have.

This expedition of 1615-16 was the last work of exploration which Champlain accomplished, and with it the portion of the

INTRODUCTION

narrative of 1632, selected for this edition, closes. The rest of it, a little more than half, belongs to the history of Quebec and of Canada, and not to the story of American exploration. It is the record of Champlain's devotion to his great design of establishing a New France in America, and of the obstacles arising from the lack of real vital interest in the work in the minds of the ruling powers in France and from the jealousies of rival traders and companies. In the years 1628 and 1629, to internal dissensions the new peril of outside hostility was added, and the prospects of a New France were temporarily eclipsed by the English attack upon and capture of Quebec. In the years immediately following, Champlain labored in France in the interest of the colony. Most important among the varied activities in its behalf was the preparation of a revised narrative of his explorations and of the history of New France down to 1629. This work was the *Voyages* of 1632.

Canada had now been restored to France, and in 1633 Champlain returned to Canada under a new commission as Governor. But little over two years of life remained, and these, like the thirty of ceaseless activity that had preceded them, were devoted to

INTRODUCTION

restoring the colony from the ravages of war. The end came on Christmas Day, 1635, after an illness of nearly three months.

Champlain left no children. He did not marry until over forty years of age. In 1610 he entered into a contract of marriage with Hélène Boullé, then a girl of twelve, who, by agreement, was to live two years more with her parents before joining her husband. She went to Quebec with him in 1620 and lived there four years. After that their lives drew apart and Madame de Champlain lived by herself in Paris, and later asked her husband to allow her to enter a convent of Ursuline nuns. Champlain refused, but some years after his death she carried out her wish and founded an Ursuline monastery in Meaux.

In his first two publications, Champlain is plain "Samuel Champlain of Brouage," but some time later and before the issue of his narrative of 1613 he was raised to noble rank and henceforth became the *Sieur de Champlain*.

Of Champlain no authentic portrait is known to exist. Those hitherto reproduced have been shown by Victor Hugo Paltsits to be all derived from a lithograph, the work of a nineteenth century artist, Louis César Joseph Ducornet, which was given to the

INTRODUCTION

public in 1854.⁴ Yet although we have no physical likeness of the man, his moral image is ineffaceably stamped upon the memory of every student of his writings. The more familiar one becomes with these narratives, the more solid and permanent is the impression of a singularly well-rounded character, full of strength, dignity and sweetness.

If we compare him with the other explorers and founders of that age he stands above them all in the range of his achievement. The explorations of De Soto and Coronado surpass those of Champlain in the extent of territory covered and in magnitude, but the results fall short of his in accuracy of detail and in permanent positive contribution to knowledge. The figure of La Salle is more brilliant on the page of the historian, but he was inferior to Champlain as a leader, and, like De Soto and Coronado, he ranks as an explorer only; Champlain, on the other hand, was not only an explorer who "threw light into the dark places of American geography and brought order out of chaos of American cartography,"⁵ he was also the historian of his expeditions and

⁴ *A Critical Examination of Champlain's Portraits*. Acadiensis, Vol. IV (1904), pp. 306-312.

⁵ Parkman, *Pioneers of New France*, 256.

INTRODUCTION

of the early days of Quebec, and in addition to that the most indefatigable promoter of French colonization and the first French writer to discuss the principles of colonial policy. In France, he undertook the work to which Raleigh and Hakluyt in England devoted themselves with such assiduity. Of the English explorers who were also writers, Captain John Smith has attained the widest celebrity. That his explorations should rank with Champlain's will hardly be pretended by his most enthusiastic admirers. On the other hand, his writings are too full of the air of romance, if not of its substance, for him to be taken as a serious historian of his own career; and his services as an administrator in Virginia, considerable as they were, extended over too short a time to rival Champlain's at Quebec. Of English founders and governors of colonies who have also recorded the history of such beginnings, William Bradford and John Winthrop unquestionably stand first in this period, and a comparison of their work with that of "The Father of New France" suggests itself. In literary quality Bradford's *History of Plimouth Plantation* surpasses anything that Champlain wrote, and the community over which Winthrop presided so many years and whose story

INTRODUCTION

he told with such candor has played a far larger part in American history and life than fell to the fortune of the people of New France, yet the outlook and range of Champlain's achievements are far more comprehensive than those of either Bradford or Winthrop. Neither of them was an explorer, nor did either become a sympathetic and observing student of Indian life. Thus, in some one or two of the many fields of his activity, others have surpassed Champlain, but no other Frenchman and no Spaniard or Englishman has attained his high level and wide range. His fame is steadily increasing, and the two races who dwell in the scene of his labors, however antagonistic in other things, unite in a friendly rivalry in rendering homage to his name.

To

Monseigneur, the most illustrious Cardinal,
Duke de Richelieu, Head, Grand Master
and Superintendent-General of the Com-
merce and Navigation of France.

MONSEIGNEUR :

These narratives are offered to you as the one to whom they are chiefly due, not only because of your eminent power in the Church and in the State, as well as in the command of all navigation, but also that you may be promptly informed of the greatness, the fertility, and the beauty of the places that they describe. For it may be assumed that it was not without great and vital reasons that the Kings who were predecessors of His Majesty, and he also, not only raised the standard of the Cross in that land, in order to establish the faith there, as they did, but also wished to attach to it the name of New France. You will find here the great and dangerous voyages that have been undertaken thither ; the discoveries that followed upon them ; the extent of these lands, no less than four times

DEDICATION

as large as France; their situation; the facility with which a safe and important commerce can be carried on there; the great profit to be derived from it; the fact that our Kings have taken possession of a large part of the country; the missions that they have instituted there of various religious orders; their progress in the conversion of a good many savages; [the account of] the clearing of certain tracts of land, by which you will discover that they in no way fall short of the soil of France in fertility; and, finally, the settlements and forts which have been built there in the name of France. The fact that I have been assiduously engaged in the preservation of these beginnings, as well as in a large number of these discoveries, for the last thirty years, both by the authority of our viceroys, and by that of your Grace, will be my excuse, Monseigneur, if you please, for the liberty that I take in offering you this little treatise, feeling confident that it will not be disagreeable to you; not out of consideration for myself, but only out of consideration for the public, who already make your name resound on the shores of every sea throughout the habitable earth, with their acclamations of the results of which the continuation of your glorious deeds gives promise. And since

DEDICATION

your Grace has raised them to the utmost height on land, by the peace that you have established in this Kingdom after so many and such fortunate victories, you will not be less inclined to call forth admiration during the peace in the matters that concern it: above all, in the re-establishment of the commerce of France in the most remote countries, as the most assured way that she has of reviving it under your favorable auspices. But among these foreign peoples those of New France are foremost in extending their hands to you; believing, with all France, that, since God, on the one hand, has constituted you a Prince of the Church, and, on the other hand, has raised you to the pre-eminent dignities that you hold, you will not only bestow upon them the light of the faith which they long for continually, but will also assist and support the possession of this new land, by the settlements and colonies that will be found necessary there; and that, in fine, since God has expressly chosen you among all men for the perfection of this great work, it will be entirely accomplished by your hands. This is my constant wish, and I add to it the offer of my remaining years, which I shall regard as very happily and usefully employed in so glorious a design if, in addi-

DEDICATION

tion to all my past labors, I may still be
honored by the commands that I await from
your Grace,

MONSEIGNEUR:

servant,

CHAMPLAIN.

The Voyages of Sieur de Champlain

VOLUME I—BOOK I

CHAPTER I

Extent of New France and the excellence of its soil. Reasons for establishing Colonies in the New France of the West. Rivers, lakes, ponds, woods, meadows and islands of New France. Its fertility. Its peoples.

THE labors that Sieur de Champlain has endured in discovering several countries, lakes, rivers, and islands of New France, during the last twenty-seven years,¹ have not made him lose courage because of the difficulties that have been encountered; but, on the contrary, the dangers and risks that he has met with, instead of lessening, have redoubled his courage. And two very strong reasons in particular have decided him to make new voyages there. The first is that under the reign of King Louis the Just,² France should become enriched and in-

¹I. e., from 1603 to 1630.

²Louis XIII.

VOYAGES AND EXPLORATIONS

treased by a country of which the extent exceeds sixteen hundred leagues in length and nearly five hundred in breadth; the second, that the richness of the soil and the useful things that can be derived from it, whether for commerce or to make life pleasant in that country, are such that one cannot estimate the advantage that the French would gain from it some day, if the French colonies that may be established there should be protected by the favor and authority of His Majesty.

The new discoveries led to the purpose of establishing colonies, which, though at first of little account, have nevertheless in course of time, by means of commerce, become equal to the states of the greatest kings. One may put in this class several cities that the Spaniards have founded in Peru and other parts of the world within the last hundred and twenty years, which were nothing to begin with. Europe can offer the example of the city of Venice, which was originally a refuge for poor fishermen. Genoa, one of the most superb cities of the world, was built in a region surrounded by mountains, very wild, and so sterile that the inhabitants were obliged to have soil brought from outside to cultivate their garden plots, and their sea is without

SAMUEL DE CHAMPLAIN

fish. The city of Marseilles, which formerly was nothing but a great marsh, surrounded by rugged hills and mountains, nevertheless in the course of time made its land fertile, and has become famous and an important seat of commerce. Similarly, many small colonies which had the convenience of ports and harbors have increased in wealth and in reputation.

It must be said also that the country of New France is a new world, and not a kingdom; perfectly beautiful, with very convenient locations, both on the banks of the great river St. Lawrence (the ornament of the country) and on other rivers, lakes, ponds and brooks. It has, too, an infinite number of beautiful islands, and they contain very pleasant and delightful meadows and groves where, during the spring and the summer, may be seen a great number of birds which come there in their time and season. The soil is very fertile for all kinds of grain; the pasturage is abundant; and a network of great rivers and lakes, which are like seas lying across the countries, lend great facility to all the explorations of the interior, whence one could get access to the oceans on the west, the east, the north, and even on the south.

The country is filled with immense tall

VOYAGES AND EXPLORATIONS

forests composed of the same kinds of trees that we have in France. The air is salubrious and the water excellent in the latitudes corresponding to ours. The benefit that can be derived from this country, according to what Sieur de Champlain hopes to demonstrate, is sufficient to make the enterprise worth considering, since this country can supply for the service of the King the same advantages that we have in France, as will appear from the following account.

In New France there are a great many savage peoples; some of whom are sedentary, fond of cultivating the soil, and having cities and villages enclosed with palisades; others are roving tribes which live by hunting and fishing, and have no knowledge of God. But there is hope that the clergy who have been sent there and who are beginning to establish themselves and to found seminaries will be able in a few years to make great progress in the conversion of these peoples. This is the first care of His Majesty, who, turning his eyes toward Heaven rather than toward the earth, will support, if it is his good pleasure, such founders as engage to transport clergy to work at this sacred harvest, and propose to establish a Colony as being the only way of making the name of the true God recog-

SAMUEL DE CHAMPLAIN

nized, and of establishing the Christian religion there: such founders, too, as would oblige the French who go there to work, first of all, at tilling the soil, in order to have the necessaries of life on the spot, without being forced to bring them from France. That done, the country will furnish in abundance all that can be wished in life, whether to satisfy needs or pleasures, as will be shown hereafter.

If one cares for hawking, one can find in these places all sorts of birds of prey in as great numbers as one could wish: falcons, gerfalcons, sakers, tassels, sparhawks, gos-hawks, marlins, muskets, two kinds of eagles, little and big owls, great horned owls of exceptional size, pyes, woodpeckers. And there are other kinds of birds of prey, less common than those named, with grey plumage on the back and white on the belly, as fat and large as a hen, with one foot like the talon of a bird of prey, with which it catches fish; the other like that of a duck. The latter serves for swimming in the water when he dives for fish. This bird is not supposed to be found except in New France.³

³The belief that this bird, which was probably the bald buzzard or sea eagle, has one foot webbed is a bit of folk-lore.

VOYAGES AND EXPLORATIONS

For hunting with setters, there are three kinds of partridges: some are true pheasants, others are black, and still others white. These last come in winter and have flesh like wood-pigeons, of a very excellent flavor.

As for hunting for other game, river birds abound there; all sorts of ducks, teal, white and grey geese, bustards,⁴ little geese, woodcock, snipe, little and big larks, plover, herons, cranes, swans, divers of two or three kinds, coots, ospreys, curlews, thrushes, white and grey sea gulls; and on the coasts and shores of the sea, cormorants, sea parrots, sea pyes, and others in infinite numbers which come there in their season.

In the woods and in the country which is inhabited by the Iroquois, a people of New France, there are many wild turkeys, and at Quebec a quantity of turtle-doves throughout the summer; also blackbirds, linnets, sky larks, and other kinds of birds of varied plumage, which in their season sing very sweetly.

After this kind of hunting may be mentioned another not less pleasant and agreeable, but more difficult. There are in this

⁴The brant goose was called *outarde* (bustard) by the early French explorers. On these birds cf. J. P. Baxter, *Jacques Cartier*, 158, n.

SAMUEL DE CHAMPLAIN

same country, foxes, common wolves and spotted lynxes, wild cats, porcupines, beavers, muskrats, otters, sables, martens, varieties of badgers, hares, bears, moose, stags, deer, caribous as big as wild asses, kids, flying squirrels, and other kinds of animals which we do not have in France. They can be caught either by lying in wait or with a trap, or, if one suddenly shouts on the islands where they resort most often, one can kill them easily as they throw themselves in the water when they hear the noise; or they can be caught in any other way that the ingenuity of those who take pleasure in it may suggest.

If one is fond of fishing, whether with the line, nets, warrens, weels or other inventions, there are rivers, brooks, lakes and ponds in as great number as one could desire, with an abundance of salmon; very beautiful trout, fine and large, of every kind; sturgeon of three sizes; shad; very good bass, some of which weigh twenty pounds. There are carp of all kinds and some of them are very large; and pike, some of them five feet long; turbot without scales, two or three kinds, big and little; white fish a foot long; gold fish, smelts, tench, perch, tortoises, seal, of which the oil is very good even for frying; white por-

VOYAGES AND EXPLORATIONS

poises, and many others that we do not have and that are not found in our rivers and ponds. All these varieties of fish are found in the great river St. Lawrence; besides, cod and whales are caught on the coasts of New France in nearly all seasons.

Thus one can judge of the pleasure that the French will have when once they are settled in these places; living a sweet, quiet life, with perfect freedom to hunt, fish, and make homes for themselves according to their desires; with occupation for the mind in building, clearing the ground, working gardens, planting them, grafting, making nurseries, planting all kinds of grains, roots, vegetables, salad greens and other pot-herbs, over as much land and in as great quantity as they wish. The vines there bear pretty good grapes, even though they are wild. If these are transplanted and cultivated they will yield fruit in abundance. And he who will have thirty acres of cleared land in that country, with the help of a few cattle, and of hunting and fishing, and trading with the savages in conformity to the regulations of the company of New France, will be able to live there with a family of ten as well as those in France who have an income of fifteen or twenty thousand livres.

SAMUEL DE CHAMPLAIN

CHAPTER II

That Kings and great Princes ought to take more pains to spread the knowledge of the true God and magnify His glory among barbarians than to multiply their states. Voyages of the French to the New World since the year 1504.

THE most illustrious palms and laurels that kings and princes can win in this world are contempt for temporal blessings and the desire to gain the spiritual. They cannot do this more profitably than by converting, through their labor and piety, to the catholic, apostolic and Roman religion, an infinite number of savages, who live without faith, without law, with no knowledge of the true God. For the taking of forts, the winning of battles, and the conquests of countries, are nothing in comparison with the reward of those who prepare for themselves crowns in heaven, unless it be fighting against infidels. In that case, war is not only necessary, but just and holy, since the safety of Christianity, the glory of God and the defence of the faith are at stake. These labors are, in themselves,

VOYAGES AND EXPLORATIONS

praiseworthy and very commendable, besides being in conformity to the commandment of God, which says, *That the conversion of an infidel is of more value than the conquest of a kingdom.*¹ And if all this cannot move us to seek after heavenly blessings at least as passionately as after those of the earth, it is because men's covetousness for this world's blessings is so great that most of them do not care for the conversion of infidels so long as their fortune corresponds to their desires, and everything conforms to their wishes. Moreover, it is this covetousness that has ruined and is wholly ruining the progress and advancement of this enterprise, which is not yet well under way, and is in danger of collapsing, unless His Majesty establishes there conditions as righteous, charitable and just as he is himself; and unless he himself takes pleasure in learning what can be done to increase the glory of God and to benefit his state, repelling the envy of those who should support this enterprise, but who seek its ruin rather than its success.

It is nothing new for the French to make

¹Possibly a confused and vague recollection of "For what shall it profit a man if he shall gain the whole world and lose his own soul?" Mark viii, 36.

SAMUEL DE CHAMPLAIN

sea voyages for conquest. We know very well that the discovery of new countries and noble enterprises on the sea were begun by our forefathers.

It was the Bretons and Normans who, in the year 1504, were the first Christians to discover the grand bank of the Codfish² and the islands of the New World, as is noted in the histories of Niflet and of Antoine Maginus.³

It is also very certain that in the time of King Francis I, in the year 1523, he sent Verazzano, a Florentine, to discover the lands, coasts and harbors of Florida, as the accounts of his voyages bear testimony; where, after having explored the coast from latitude 33° to latitude 47°, just as he was thinking of making a home there, death put an end to his life and his plans.⁴

After that, the same King Francis, persuaded by Messire Philip Chabot, Admiral of France, sent Jacques Cartier to discover

²The words of the original are "le grand Banc des Moluques." The last word should be "Morues."

³The reference is to Wytfliet's *Descriptionis Ptolemaicæ Augmentum*, as translated into French by Antoine Magin. Douay, 1611. See Parkman. *Pioneers of New France*, 190.

⁴On Verazzano. See Bourne, *Spain in America*, 143-145.

VOYAGES AND EXPLORATIONS

new lands, and for this purpose he made two voyages in the years 1534 and 1535. In the first he discovered the Island of Newfoundland and the Gulf of Saint Lawrence, with several other islands in this gulf, and he would have gone farther had not the severe season hastened his return. This Jacques Cartier was from the city of St. Malo. He was thoroughly versed and experienced in seamanship; the equal of any one of his times. And St. Malo is under obligation to preserve his memory, for it was his greatest desire to discover new lands. At the request of Charles de Mouy, Sieur de la Mailleres,⁵ at that time Vice-Admiral, he undertook the same voyage for the second time; and in order to compass his purpose and to have His Majesty lay the foundation of a colony to increase the honor of God and his royal authority, he^{5*} gave his commissions with that of the afore-said Sieur Admiral, who had the direction of this embarkation and contributed all he could to it. When the commissions had been prepared, His Majesty put this same Cartier in charge, and he set sail with two vessels on May 16, 1535. His voyage was so successful that he arrived at the Gulf of

⁵Meilleraye. L.

^{5*}I. e., the Vice-Admiral.

SAMUEL DE CHAMPLAIN

Saint Lawrence, entered the river with his ships of 800 tons burden,⁶ and even got as far as an island a hundred and twenty leagues up the river, which he called the Isle of Orleans. From there he went some ten leagues farther up the same stream to winter on a small river which is almost dry at low tide. This he named St. Croix, because he arrived there on the day of the Exaltation of the Holy Cross.⁷ The place is now called the St. Charles River and at present the Recollect fathers and the Jesuit fathers are stationed there to found a seminary for the instruction of youth.

From there Cartier went up the river some sixty leagues, as far as a place which was called Ochelaga in his time and is now called Grand Sault St. Louis.⁸ It was inhabited by savages who were sedentary and cultivated the soil. This they no longer do, because of the wars that have made them withdraw into the interior.

When Cartier, according to his account, perceived the difficulty of passing up the

⁶A copyist's or printer's error. The narrative of Cartier's second voyage gives the tonnage of his three vessels as 100-120, 60 and 40, respectively. —(L.)

⁷September 14.

⁸The modern Lachine Rapids.

VOYAGES AND EXPLORATIONS

rapids and that it was impossible, he returned where his vessels were; and the weather and the season were so urgent that he was obliged to winter on the St. Croix River, in the place where the Jesuits live now, on the border of another little river which empties into the St. Croix, called the Jacques Cartier River, as his narratives testify.

Cartier was made so unhappy in this voyage, particularly by the ravages of scurvy, of which the larger part of his men died, that when spring came he returned to France, saddened and disturbed enough at this loss and at the little progress that he thought he had made. He came to the conclusion, as a result of his winter's experience with the scurvy, which he called the disease of the country, that the climate was so different from our own that we could not live in it without great difficulty.

So when he had made his report to the King and to the Sieur Admiral and De Mailleres,^{8*} who did not go deeply into the matter, the enterprise bore no fruit. But if Cartier could have understood the cause of his sickness, and the beneficial and certain remedy for its prevention, although he and his men did receive some relief from an herb

^{8*}I. e., De Meilleraye, the Vice-Admiral.

SAMUEL DE CHAMPLAIN

called *aneda*,⁹ just as we did when we were in the same plight, there is no doubt that the King from that time would not have neglected to forward the plan, as he had already done: for at that time the country was more peopled with sedentary tribes than now. It was this last fact that led His Majesty to have this second voyage made and the undertaking carried on, for he had a holy desire to send colonists there. This was what came of it.

This affair might well have been undertaken by some others than Cartier, who would not have been so soon daunted and would not, on that account, have abandoned an enterprise so well begun. For, to tell the truth, those who are the leaders of explorations are oftentimes those who can put an end to the execution of a praiseworthy project, if people stop to consider their reports. For, if they are believed, it is thought that the enterprise is impossible or so involved in difficulties that it cannot be brought to completion without almost unendurable outlay and trouble. This is the reason why this enterprise did not achieve success. Besides, there are sometimes affairs of so much importance in a state as to

⁹Apparently a spruce or arbor vitæ. Parkman, *Pioneers of France*, 214.

VOYAGES AND EXPLORATIONS

cause others to be neglected for awhile; or it may be that those who would gladly have gone on with them, die, and so the years pass with nothing done.

CHAPTER III

Voyage to Florida under the reign of King Charles IX by Jean Ribaut. He has a fort built, called Fort Charles, on the River of May. Albert, the Captain, whom he leaves there, has no provisions, and is killed by the soldiers. They are taken to England by an Englishman. Voyage of Captain Laudonnière. Narrowly escapes being killed by his own men: has four of them hanged. Is pursued by famine. Recompense from the Emperor Charles to those who discovered the Indies. The French driven from the River of May by the Spaniards. They attack Laudonnière. The French killed and hanged with inscriptions.

UNDER the reign of Charles IX and the leadership of Admiral de Chastillon,¹ Jean Ribaut set sail on February 18, 1562, with two ships equipped with all that he needed to found a colony. Passing by the islands of the Gulf of Mexico, he sailed close to the coast of Florida, where he explored a river which he called the River of May.² There

¹Admiral Coligny, who was Lord of Châtillon.

²The St. John's.

SAMUEL DE CHAMPLAIN

he built a fort, to which he gave the name of Charles, leaving in command of it Captain Albert, whom he supplied with all that he thought necessary. This done, he returned to France on July 20. He was nearly six months on the voyage.

But Captain Albert did not take the trouble to have land cleared and planted, so as to prevent want, and they ate their provisions without the system that is necessary in such matters, with the result that they found themselves so short that the scarcity was extreme. Thereupon, as the soldiers and others in subjection to him did not wish to obey him, he had one of them hanged for a very small matter. This brought about, within a few days, a mutiny so violent and disobedience so great, that they killed their captain and made another man, Nicolas Barré, their leader. When they saw that no help was coming from France, they built a little boat to return there, and set sail with very few provisions. History tells us that their hunger was so cruel that they ate one of their companions. But God pitied this miserable crew and had mercy upon them, and they were picked up by an Englishman who came to their aid and took them to England, where they revived. This shows how little pains was taken to bring relief

VOYAGES AND EXPLORATIONS

to the colonists, on account of the war that was going on between France and Spain.

Nevertheless, it was very cruel to let men die of hunger and be reduced to the point of eating one another, to save risking a small vessel at sea, which could bring them relief. This delayed the founding of a colony and foreboded a worse end, since the beginning had been badly conducted in every respect.

Peace was made between France and Spain, which gave leisure to enter upon new plans and expeditions. The same *Sieur* Admiral de Chastillon had other vessels equipped, under the charge of Captain Laudonnière, who was supplied with everything for his emigrants. He left on April 22, 1564, and reached the coast of Florida in latitude 32°, at the River of May. There he landed all his companions and supplies and had a fort built, which he called Caroline.

While the ships were at this place, conspiracies were formed against Laudonnière, which were discovered. When everything was straightened out, Laudonnière decided to send back his ships to France, and he let Captain Bourdet command them. He set out on the voyage, leaving Laudonnière with his companions, some of whom were

SAMUEL DE CHAMPLAIN

so rebellious that they threatened to kill their captain if he did not let them cruise for plunder in the direction of the Islands of the Virgins and Santo Domingo; and he had to give his permission and let them go. They got into a small vessel, made prey of some Spanish ships, and, after they had sailed all about all these islands, they were obliged to return to Fort Caroline. Upon their arrival, Laudonnière had four of the principal mutineers seized and put to death.

After these misfortunes, as the provisions were coming to an end, they suffered much until May, without any help from France. And when they had been obliged, for six weeks, to go in search of roots in the woods, they at last resolved to build a boat and have it ready by the month of August to return to France.

The famine, however, increased more and more, and these men became so weak and debilitated that they were scarcely able to complete their work. This led them to look for provisions among the savages, who treated them badly, charged them much more for their provisions than they were worth, laughing at and making fun of the Frenchmen, who endured these jeers grudgingly. Laudonnière pacified them as gently as he could, but, do what he would, it was

VOYAGES AND EXPLORATIONS

necessary to fight the savages, in order to get something to live on. They were so successful that they got some Indian corn, which gave them courage to finish their ship. That done, they began to pull down and demolish the fort, so as to return to France. While they were engaged in this they descried four sail. At first they feared that they were Spanish, but at last recognized them as English, and they, when they saw that the Frenchmen were in need, aided them with supplies and even fitted up their vessel. This remarkable courtesy was offered by the leader of this expedition, whose name was Jean Hanubins³ [Hawkins]. When he had assisted them to the best of his ability, he weighed anchor and set sail to carry out the purpose of his voyage.

As Laudonnière was about to set sail with his companions, he sighted some vessels out at sea, and, while he was in suspense as to who they were, it was discovered that it was Captain Ribaut, who had come to bring aid to Laudonnière. The rejoicing on both sides was great, for now they saw the revival of their hope that before had seemed absolutely lost. But they

³That Hawkins appears in the text disguised as Hanubins is one of the many indications that Champlain did not see the proofs of his book.

SAMUEL DE CHAMPLAIN

were very sorry that the fort had been pulled down. Ribaut told Laudonnière that several bad reports had been made concerning him, which he recognized to be false, and that, if they had been true, he should have had reason to do what he had been ordered.

It is always the rule that virtue is oppressed by the slander of the wicked, which, in the end, reveals them for what they are and causes them to be despised by every one. It is well known how much trouble this made in the conquest of the Indies, both for Christopher Columbus and later for Ferdinand Cortez and others, who, blamed unfairly, justified themselves in the end to the Emperor.

This is why one should not believe anything thoughtlessly, before matters have been thoroughly examined into; but one should always recognize the merit and worth of the generous courage which sacrifices itself for God, for king and for country, as did these men just mentioned, to whom the Emperor accorded recognition, in spite of envy, and whom he honored with wealth and fine, honorable commissions, in order to give them courage to do well, in order to inspire others to imitate them, and the wicked to reform.

VOYAGES AND EXPLORATIONS

While Laudonnière and Ribaut were consulting about having their provisions unloaded, they sighted, on September 4, 1565, six sails which seemed to be big vessels and which they recognized as Spanish. They dropped anchor in the harbor where Ribaut's four ships were and assured the French of their friendship. Then, seeing that some of the soldiers were on shore, they fired cannon shots at our men, which, since their force was small, obliged them to cut their cable at the hawse-holes and set sail. The Spaniards did the same and pursued them in full force the next day. And as our vessels were better sailers than theirs, they returned to the coast and landed at a river, eight leagues from Fort Caroline, and our ships returned to the River of May. Three of the Spanish vessels, however, came to the harbor and put ashore their infantry, provisions and ammunition.

Captain Ribaut, contrary to the advice of Laudonnière, who explained to him the difficulties that might be incurred, whether from the heavy winds that usually prevailed at that season, or from some other cause, though it was an obstinate act, and he always wanted to have his own way without counsel, which is a very bad thing in such matters, decided to face the Spaniard and

SAMUEL DE CHAMPLAIN

fight him at whatever cost. With this object, he had his vessels manned and equipped with all that was necessary, and set sail on September 8. He left his men very poorly supplied and Laudonnière pretty sick. The latter did not cease to encourage his soldiers all he could and exhort them to fortify themselves to the best of their ability, so as to resist the forces of their enemy, who were getting ready to attack Laudonnière on September 20. At that time there was a very violent down-pour, which continued so long that our men, who were tired out with watching, abandoned their task. They thought, too, that the enemy would not come in such a terrible storm. Some of them who went on the rampart saw the Spaniards coming, and cried: "To arms! To arms! The enemy is coming!" At this cry, Laudonnière prepared to await them, and urged his men to the fight. They wanted to protect two breaches that had not yet been repaired, but at last they were overcome and killed. Laudonnière, seeing that he could not hold out any longer, expected to be killed in getting away, and escaped into the woods with the savages, where he found a number of soldiers, whom he rallied with a great deal of trouble. Taking their way through heavy,

VOYAGES AND EXPLORATIONS

swamps and marshes, they reached the entrance of the River of May, where there was a ship commanded by a nephew of Captain Ribaut, who had not been able to get any farther than this place, on account of the great storm. The other ships were lost on the coast, as were many soldiers and sailors. Ribaut and many others were captured and cruelly and inhumanly killed; and some of them were hanged with an inscription on their backs, bearing these words: *We have not hanged these men as Frenchmen, but as Lutherans, enemies of the faith.*⁴

Laudonnière, in the face of so many disasters, decided to return to France on September 25, 1565. He weighed anchor, set sail on November 11, and arrived near the coast of England. As he felt ill there, he had them put him ashore to recover his health, and from there he came to France to make his report to the King. The Spaniards, however, fortified themselves in three places to ensure themselves against every event. We shall see, in the next chapter,

⁴This last is not well authenticated. The most recent and most careful study of this clash between the French and the Spaniards in Florida is Woodbury Lowery: *The Spanish Settlements in the United States, 1562-1574*. New York, 1905.

SAMUEL DE CHAMPLAIN

what punishment God gave to the Spaniards for their injustice and cruelty to the French.

CHAPTER IV

The King of France feigns to take no notice for a time of the injury that he has received from the Spaniards in the cruelty that they showed to the French. Vengeance for it was reserved for *Sieur Chevalier de Gourgues*. His voyage: his arrival on the coast of Florida. Is attacked by some Spaniards whom he defeats and treats as they did the French.

THE King, knowing the injustice and insults inflicted on the French, his subjects, by the Spaniards, as I have said, had reason to demand reparation and satisfaction for them of Charles V,¹ Emperor and King of Spain, on the ground of their having been committed in violation of the promise that the Spanish had made not to disturb nor molest them in the preservation of what they had gained with so much trouble in New France,^{1*} in accordance with the commissions of the King of France, their mas-

¹The King of Spain at this time was Philip II.

^{1*}This statement is an error. The Spanish king had made no such promise. His attitude was quite the contrary. Cf. Lowery, *Spanish Settlements, 1562-1574*, pp. 101-119.

VOYAGES AND EXPLORATIONS

ter, of which the Spaniards were not ignorant. Nevertheless, they had put them to death ignominiously, on the specious pretence that they were Lutherans, as they said, although they were better Catholics than they were, without hypocrisy or superstition, and had been converted to the Christian faith several centuries before the Spaniards.²

His Majesty feigned to take no notice of this offence for a while, because the two crowns had some differences to settle first, and principally with the Emperor,³ which prevented any satisfaction being received for such inhumanities.

But since God never deserts His own and never suffers barbarous treatment shown them to remain unpunished, these Spaniards were paid back in the same coin that they had offered the French. For in the year 1567 appeared the brave Chevalier de Gourgues, who was full of valor and courage, to avenge this insult to the French nation;

²Champlain is in error here. The majority of the French were Calvinists, although there were some Catholics among them. See Lowery, *Spanish Settlements*, 53.

³This is not clear, but apparently Champlain means that the Spanish King was particularly slow to make any settlement of their difficulties.

SAMUEL DE CHAMPLAIN

and, seeing that none of the nobility with whom France abounded offered to get satisfaction for such an injury, he undertook the enterprise. And, in order not to have his purpose known beforehand, he spread abroad the rumor that an expedition was being prepared for a certain deed that he wished to accomplish on the coast of Africa. For this purpose a number of sailors and soldiers assembled at Bordeaux, where ship stores of all kinds are supplied. They provided and furnished themselves with everything that he thought would be necessary on this voyage.

He set sail on August 23 of the same year in three ships, and he had with him 250 men. Once at sea, he put into port on the coast of Africa, either to recruit, or for some other reason. But it was not for long, for he set sail at once, and made it known through some trustworthy friends of his that he had altered his first plan for another, which was more honorable than that in connection with the coast of Africa, less dangerous, and easier to carry out. And where he stopped to recruit he was told that what he said was displeasing to several of his men, who believed that the voyage was ended, and that they would have to go back with nothing accomplished. Neverthe-

VOYAGES AND EXPLORATIONS

less, they all had a great desire to try some other plan.

Sieur de Gourgues, knowing the wish of his companions, who had not lost courage, and being assured in regard to his crew, found an excuse to assemble his council, whom he told the reason why he could not carry out what he had undertaken. He said that the plan must not be thought of any more, but also that there was not the slightest probability of their returning to France with nothing accomplished. He said that he knew of another undertaking not less glorious than profitable for such brave spirits as he had in his ships, of which the memory would be immortal; that it was one of the most signal exploits that could be undertaken. Each one was consumed with eagerness and desire to see the accomplishment of what he mentioned, and he told them that if he were well supported in this praiseworthy enterprise he would be proud to die in carrying it out. And as they wished Sieur de Gourgues to tell them his plan he got them all together and spoke as follows:

“My companions and faithful friends of my fortune, you are not ignorant of how much I cherish such brave spirits as you. And you have shown this courage sufficiently by the fine resolution that you have made

SAMUEL DE CHAMPLAIN

to follow and help me in every danger and honorable risk that we shall have to undergo and face, whenever we shall be confronted by them. And you know the interest that I have in the preservation of your lives. I do not wish to involve you in the risk of an enterprise that I might know would end in ruin without honor. It would be great and reprehensible foolhardiness on my part to risk your lives in a plan as difficult as that, which I do not think this is, seeing that I have devoted a good part of my possessions and many of my friends to equip these ships and send them to sea, for I am the only undertaker of this voyage. But all that does not give me so much cause to be anxious, as I have to rejoice to see that you all are resolved upon another enterprise, which will redound to your glory: to wit, to go to revenge the injury which our nation received from the Spaniards, who inflicted such a wound upon France that she will always bleed from the sufferings and infamous treatment that they made the French endure, and the barbarous and unheard-of cruelties which they committed. The resentment that I have sometimes felt on account of it has made me shed tears of pity, and has roused my courage so much that I have resolved, with the help of God,

VOYAGES AND EXPLORATIONS

and your help, to have just revenge for such a crime and such cruelty on the part of the Spaniards, upon these base and cowardly hearts who miserably surprised our fellow-countrymen, whom they had not dared to face with arms in their hands. They are in a bad situation, and we shall take them by surprise easily. I have men on my ships who know the country very well, and we can go there in safety. Here, dear companions, is something to inspire our courage. Show that you are as ready to carry out this good plan as to follow me. Will you not be glad to bear away triumphant laurels from the pillage of our enemies?"

He had no sooner stopped speaking than each of them cried, joyfully: "Let us go whither you will. We could not have a greater pleasure and honor than that which you propose, which is a thousand times more honorable than can be imagined. We much prefer to die in the pursuit of this just vengeance for the insult that was offered to France than to be wounded in another undertaking. The greatest desire of us all is to conquer or to die, in showing you the utmost fidelity. Command what you think best; you have soldiers who have the courage to accomplish what you

SAMUEL DE CHAMPLAIN

command. We shall not rest until we are face to face with the enemy."

Joy increased as never before in the ships. Sieur de Gourgues had the course changed and fired several cannon shots to begin the rejoicing and to encourage all the soldiers. And then this generous chevalier set sail toward the shores of Florida, and was so favored by good weather that in a few days he arrived near Fort Caroline. At dawn the savages of the country displayed the smoke of many fires, until Sieur de Gourgues had lowered sail and dropped anchor. He sent on shore to find out from the savages what the condition of the Spaniards was. They were very glad to see Sieur de Gourgues intent upon attacking them. They stated that they were about 400 in number, very well armed, and equipped with everything necessary. When he had found out how the Spaniards were encamped he began to prepare his soldiers for the attack. Let us see if they will have the courage to stand by Sieur de Gourgues, just as they did by Laudonnière, who was ill-supplied with ammunition and with what he needed.

Then Sieur de Gourgues, having his men and some savages lead him through the heart of the woods, without being seen by the Spaniards, acquainted himself with the

VOYAGES AND EXPLORATIONS

places and the condition in which they were. The Saturday before Low Sunday, in the month of April, 1568, he attacked the two forts violently and prepared to take them by storm, in which he encountered great resistance. And the courage of the French was shown when the battle raged, for they threw themselves headlong into the fight, at times being driven back, and then taking heart to return to the contest with more valor than before. Though severely attacked they defended better. Neither death nor wounds made them turn pale or made them lose either judgment or bravery.

Our noble chevalier, cutlass in hand, inspired them with courage, and, like a bold lion, at the head of his men, reached the top of the rampart, beat back the Spaniards and made his way among them. His soldiers followed him, fought bravely, forced an entrance into the two forts, and killed all whom they encountered; so that all except those who died, or fled, were taken prisoners by the French. Those who expected to escape into the woods were cut to pieces by the savages, who treated them as they had treated our men. Two days afterward Sieur de Gourgues took possession of the large fort, which the enemy had abandoned after some resistance, some of their

SAMUEL DE CHAMPLAIN

number having been killed and others captured.

As he continued victorious and had come to the end of so glorious an undertaking, remembering the insult that the Spaniards had done the French, he had some of them hanged, with inscriptions on the back, bearing these words: "I have not had these men hanged as Spaniards, but as pirates, robbers, and sea rovers." After this execution he had the forts torn down and destroyed; then set sail to return to France, leaving in the hearts of the savages an everlasting regret at being deprived of so high-minded a captain. His departure was on May 30, 1568, and he reached Rochelle on June 6. From there he went to Bordeaux, where he was received with as much honor and enthusiasm as ever a captain was.

But no sooner had he arrived in France than the Emperor sent to the King to demand justice for his subjects, whom *Sieur de Gourgues* had hanged in the West Indies. His Majesty was so angered by this that he threatened to have *Sieur de Gourgues* beheaded, and he was obliged to go away for some time until the King's anger should pass off. Thus this noble Chevalier redeemed the honor of the French nation, which the Spaniards had offended, and it

VOYAGES AND EXPLORATIONS

would have been an eternal regret to France if it had not revenged the outrage received from the Spanish nation. It was the noble undertaking of a gentleman, who carried it out at his own cost and expense, solely for honor, without other hope. He achieved it gloriously, and this glory is more to be esteemed than all the treasures of the world.⁴

We have observed the great defects and failures in the voyages of Ribaut and Laudonnière. Ribaut was blamed in his for not carrying provisions for more than ten months, and not ordering land cleared and prepared for tilling, in order to be provided against the scarcity which might occur and the dangers that ships encounter at sea, or indeed their failure to arrive in time to relieve want. It at last reduced those who took part in the undertaking to the greatest extremity, even to the point of killing one another, to keep alive on human flesh, as they did on this voyage, which caused the soldiers to rebel greatly against their chief.

⁴Parkman, *Pioneers of New France*, 171, remarks, in regard to the account of de Gourgues' exploit: "It must be admitted that there is a strong savor of romance in the French narrative." See also Lowery, *Spanish Settlements, 1562-1574*, 316-336.

SAMUEL DE CHAMPLAIN

So disorder and disobedience were rife among them. At last they were obliged, though with incredible regret and after a considerable loss of men and property, to abandon the land and possessions that they had acquired in this country; and all that for the lack of having made their plans with judgment and reason.

Experience shows that in such voyages and expeditions the kings and princes and the members of their council who have undertaken them had too little knowledge for carrying out their plans. It shows that if there have been men of experience in these matters, they have been few; for most men have tried these undertakings on the foolish reports of some tricksters, who, simply to give themselves importance, pretended to be very knowing in such matters, of which they were very ignorant. For, in order to begin and complete these enterprises with honor and profit, one must spend long years in sea voyages and be experienced in such discoveries.

The greatest mistake that Laudonnière made, when he went with the intention of spending the winter, was to provide himself with so few provisions, whereas he ought to have been governed by the example of Captain Albert's wintering at Fort

VOYAGES AND EXPLORATIONS

Charles, whom Ribaut left so ill-supplied with everything. These omissions ordinarily occur in such undertakings, because it is supposed that those countries yield without being planted. Besides, such voyages are undertaken unreasonably, without practical knowledge or experience. It is one thing to make such plans in table talk, drawing on the imagination for the situation of places, the customs of the people who inhabit them, the profit and benefit that may be derived from them. It is a very different matter to send men across seas to distant countries, to traverse unknown shores and islands, from what it is to form such idle fancies in the mind, making ideal and imaginary voyages and navigations. That is not the way to carry out with honor the work of discovery. First, it is necessary to consider maturely the questions which arise in such matters; to communicate with those who have acquired a great deal of knowledge of them, who know the difficulties and the dangers which they offer, instead of setting out so thoughtlessly on the strength of simple report and talk. For it is of little use to discourse upon distant countries, and go to live in them, without having first explored them, and having lived in them at least a whole year, in or-

SAMUEL DE CHAMPLAIN

der to understand the character of the countries, and the variety of seasons, for the sake of founding a colony there afterward. Most of the undertakers of colonies and explorers do not do this, but are satisfied merely to see the shores and hills in passing, without stopping there.

Others undertake such voyages on the strength of simple reports made to persons who, although they are very intelligent in the affairs of the world, and have had long and considerable experience, nevertheless are ignorant in these matters, believing that everything follows the rule that exists in the latitude where they are. In this they find themselves very much mistaken. For there are such strange changes in nature that it is only by seeing them that we can believe in their reality. The reasons for this are extremely varied and very numerous, and therefore I shall pass them over in silence. I have said this in passing, in order that those who come after us and who make new plans may avail themselves of these points and consider them, so that when they set sail thither, the ruin and loss of others may serve as an example and as an apprenticeship.

The third fault, and the most harmful, of Ribaut's was in not having the supplies

VOYAGES AND EXPLORATIONS

and ammunition that he had brought for Laudonnière and his companions unloaded before exposing himself to the danger of losing everything, as he did, since he did not go there to fight the enemy, but to be always on the defensive, to assist Laudonnière with his men, to fortify himself, and to hold his own against those who should attack him. He could have seen clearly that, since it was the purpose of the enemy to take the fort, he needed to be stronger than those who guarded it, if he were not to expose himself thoughtlessly to danger and to chance. He would have done better to take account of the forces of the enemy before attacking them and being sure of victory. But, on the contrary, as a result of despising the advice of Laudonnière, who was more experienced than he in knowledge of the places, very great evil befell him.

Furthermore, in such undertakings, the ships that carry the provisions and the military stores for a colony should take as direct a course as possible, without turning aside to give chase to any other vessel, since, if they found it necessary to fight and should lose, this misfortune would not be confined to themselves, but they would put the colony in danger of being lost. In that

SAMUEL DE CHAMPLAIN

case, the men would be obliged to give up everything, and see themselves reduced to suffer a miserable death from the hunger that would attack them when the provisions were gone, on account of not being supplied and provisioned for at least two years, while waiting for the land to be cleared in order to support those who are in the country. These are great mistakes, like those of our more recent undertakers who did not have any land cleared, or find any means of doing so, in the twenty-two years during which the country has been inhabited, for they had no thought beyond getting profit from furs. The day will come when they will lose all that we possess there. This is easy to see, if the King does not establish a good system there.

These are the greatest defects that can be observed in the first voyages, and those that followed have scarcely been more fortunate.

VOYAGES AND EXPLORATIONS

CHAPTER V

The voyage that Sieur de Roberval despatched. Sends Alphonse of Saintonge to Labrador. His departure. His arrival. Return on account of the ice. The voyages of foreigners to the North, to go to the West (?) Indies.¹ Voyage of the Marquis de la Roche without result. His death. Noticeable defect in his undertaking.

IN the year 1541 Sieur de Roberval, who had renewed this holy undertaking, sent Alphonse, of Saintonge (one of the best navigators of his time in France), who wished, by his discoveries, to find a more northern passage toward Labrador. He had two good ships equipped with all that he needed for this discovery, and took his departure in this year, 1541.² And after having sailed along the northern coasts, and the lands of Labrador, in search of a passage that would facilitate commerce with the people of the East, by a shorter way than that around the Cape of Good Hope, or by the Straits of Magellan, owing to chance

¹It should be East Indies.

²Roberval despatched Cartier in 1541 and went himself with Alphonse in 1542. See Parkman, *Pioneers of France*, 216-228.

SAMUEL DE CHAMPLAIN

obstacles, and the risk that he ran from the ice, he was obliged to return; and he had no more to pride himself on than Cartier.

This second enterprise was only for the purpose of discovering a passage, but the other³ was to explore the interior, and inhabit it, if possible. Thus these two voyages did not succeed. As for the passage, I shall not describe in detail the attempts of foreign nations to find a passage by the north, to go to the East Indies: how, in the years 1576, 1577 and 1578, Mr. Martin Forbichet⁴ made three voyages; and, seven years afterward,⁵ Humphrey Gilbert went there with five ships. He was lost on Sable Island and lived there two years.⁶ Afterward John Davis, an Englishman, made three voyages;⁷ got as far as latitude 72°, and passed by a strait that bears his name now. Another man, named Captain Georges, made this voyage in the year 1590, and on account of the ice was obliged to return

³Roberval's voyage of 1542.

⁴Frobisher.

⁵I. e., 1583.

⁶Gilbert's largest ship, the *Delight*, was wrecked on Sable Island, but he was lost on his return in the *Squirrel*.

⁷1585, 1586, 1587.

VOYAGES AND EXPLORATIONS

without accomplishing anything.⁸ Several others who have undertaken it have had a similar fortune.

As for the Spaniards and Portuguese, they have wasted their time there. The Dutch fared no better in searching for such a passage toward the East by way of Nova Zembla than the others who lost so much time in looking for it in the West, beyond the lands called Labrador.

All this is only to show how much honor, if this passage, which was so greatly desired, had been found, would have come to him who lighted upon it; and how much advantage to the state or realm which would have possessed it. Since, then, it is our own opinion that this enterprise is of such value, it should not be despised now, and that which cannot be done in one place can be accomplished in another, in time, provided His Majesty be pleased to assist the undertakers of so praiseworthy a project. I will leave this discourse to return to our new conquerors in the country of New France.

Sieur Marquis de la Roche, of Brittany,

⁸Apparently this Captain Georges should be Captain George Weymouth. If so, the voyage was in 1602. There was no Arctic voyage in 1590 that is recorded.

SAMUEL DE CHAMPLAIN

incited by a holy desire to raise the standard of Jesus Christ, and set up the arms of his King, took a commission, in the year 1598, from King Henry the Great (of happy memory), who felt much interest in the plan. Sieur de la Roche had several ships fitted out, with a number of men and a full equipment of things necessary for such a voyage. But as he had no knowledge of the places, except through a pilot named Chédotel,⁹ from Normandy, he landed his men on Sable Island, 25 leagues to the south of the land of Cape Breton. There the men, who stayed in this place with very few conveniences, were left for seven¹⁰ years with no help but that of God. They were obliged to live in the earth, like foxes, for there was neither wood nor stone in this island suitable for building, except the wreckage and broken pieces of vessels that came to the coast of the island. They lived on nothing but the flesh of oxen and cows, which animals they found there in great quantity, for they had escaped from a Spanish ship which was lost on its way to inhabit the Island of Cape Breton. They dressed in the skins of seals, when they had worn out their clothes, saving the oil for

⁹Also written Chefdostel and Chefd'hostel.

¹⁰Five years, 1598-1603.

VOYAGES AND EXPLORATIONS

their use. They also relied upon catching fish, which is plentiful about that island. They stayed there until the parliament of Rouen ordered the before-mentioned Chédotel to go to rescue these poor wretches, with the understanding that he should have half of the commodities that they had been able to collect during their sojourn in this island, such as hides, seal-skins, oil, and black foxes. This was done. Returning to France at the end of seven years, some of them went to see His Majesty in Paris, who commanded the Duke of Sully to supply their needs. He did so, to the amount of 50 crowns, to encourage them to go back. The Marquis de la Roche, meanwhile, who was trying, in court, to get the things that His Majesty had promised him for his project, was denied them at the request of certain persons who did not wish the true religion of God to grow, or to see the Catholic, Apostolic and Roman religion flourish there. This caused him so much displeasure that, on that account and for other reasons, he was attacked by a severe sickness, which carried him off. He had given all his property and labor without experiencing any result.

In this plan of his two defects may be noted: one, that this Marquis did not have

SAMUEL DE CHAMPLAIN

some one experienced in such matters explore and reconnoitre where he was to settle, before assuming so excessive an outlay; the other, that envious persons who were near the King in his council at this time interfered with the accomplishment of the project and the good intention that His Majesty had of conferring benefits upon him. Thus kings are often deceived by those in whom they have confidence. The history of the past sufficiently illustrates the fact, and this instance can furnish us an example of it. This is the end of the fourth voyage. We come to the fifth.

VOYAGES AND EXPLORATIONS

CHAPTER VI

Voyage of Sieur de Saint Chauvin. His plan. Remonstrances made with him by Pont Gravé. Sieur de Monts goes with him. Return of St. Chauvin and Du Pont to France. Second voyage of Chauvin: his plan.

A YEAR afterward, in 1599, Sieur Chauvin of Normandy, Captain in the King's Navy, a man of great skill and experienced in navigation (who had served His Majesty in past wars, although he belonged to the religion pretending to be reformed¹), undertook this voyage under the commission of His Majesty, at the request of Sieur du Pont Gravé, of St. Malo, a man expert in sea voyages, for he had made many of them. He was accompanied by other ships as far as Tadoussac, ninety leagues up the river; a place where they traded for fur and beaver with the savages of the country,

¹I. e., the Protestant religion. The French Calvinists, or Huguenots, called their faith the reformed religion, and they were called the "reformed," in distinction from the followers of Luther. Catholic writers commonly prefixed "pretendue" to the word "reformée"—e. g., "la religion pretendue reformée."

SAMUEL DE CHAMPLAIN

who came there every spring. This Du Pont, desiring to find means to control this traffic, went to court, to seek some one of authority and special influence with the King, for the purpose of obtaining a commission to the effect that the trade of this river should be forbidden to all persons without the permission and consent of him who should be provided with that same commission, on condition that they should settle in the country, and make a home there. This was a good beginning and one which would not cost the King anything if what was in the commission should be carried out. It was the plan to take five hundred men there to fortify the country and defend it. The King had great confidence in this undertaker who, nevertheless, did not expect to go to any more expense than he could help; for, under the pretext of making a settlement, and of carrying out what he had promised, he wished to deprive all the subjects of the realm of trade there, and to keep the beaver for himself alone. And to give the enterprise a good start he began his preparations. The ships were equipped with such necessities as he thought suitable for the enterprise. Many artisans set out and presented themselves at Honfleur, the place of embarka-

VOYAGES AND EXPLORATIONS

tion. When his ships were out at sea he made this same Pont Gragé his lieutenant of one of them. But, since the head was of the opposing religion, this was not the way to establish the faith among those people whom they wished to subjugate. This was what was least considered. They went to the harbor of Tadoussac, the trading-place, and the affair was rather badly managed for making great progress. They decided to build a habitation there: the most disagreeable and barren place in this country, covered with nothing but pines, firs, birches, mountains and almost inaccessible cliffs, the soil very ill-fitted for any profitable cultivation, and the cold so extreme that if there is an ounce of cold forty leagues up the river there is a pound at Tadoussac. And how many times have I been astonished to see these places so frightful in the spring!

Now, when this Sieur Chauvin wished to build there, and to leave some men, and to protect them against the severe cold, although he had learned from Pont Gragé that it was not his opinion that they should build there, Pont Gragé urged Sieur Chauvin several times to go up this river, where it is better for building, for he had been on another voyage as far as the three riv-

SAMUEL DE CHAMPLAIN

ers, in search of the savages, in order to trade with them.

Sieur de Monts took this same voyage for pleasure, with Sieur Chauvin, and he was of the same opinion as Gravé, and, perceiving that this place was very disagreeable, he would have been very glad to look at what was farther up the river. But whatever was the reason, whether because the time did not permit then, or because of other considerations in the mind of the undertaker, he employed several workmen to build a villa, twenty-five feet long by eighteen wide and eight feet high. It was covered with boards, with a fireplace in the middle, and was in the shape of a guardhouse, and was surrounded by hurdles (which I have seen there) and a small ditch dug in the sand. For, in that country, where there are no rocks, it is all very poor sand. There was a little brook below, where they left sixteen men provided with a few necessities, whom they could harbor in this same lodging. The little that they had was put at the disposal of all, and so it did not last long. Behold them there very warm for the winter! Having done this much, Sieur Chauvin returned, not caring to look or discover further. Pont Gravé did the same.

VOYAGES AND EXPLORATIONS

While they were in France our winterers consumed, in a short time, the little that they had, and when winter came upon them they were well aware of the difference between France and Tadoussac. It was the court of King Pétaud; each one wished to command. Laziness and idleness, with the diseases that attacked them, reduced them to great want, and obliged them to give themselves up to the savages, who kindly harbored them, and they left their lodging. Some died miserably; others suffered a great deal while waiting for the return of the ships.

Sieur Chauvin, seeing his men filling their lungs with the air of the Saguenay, which was very dangerous, arranged to make a second voyage, which was as fruitful as the first. He wanted to make another better planned, but he did not keep at it long before he was seized with a malady that sent him to another world.

The trouble with this undertaking was giving to a man of opposing religion a commission to establish a nursery for the Catholic, Apostolic and Roman faith, of which the heretics have such a horror and abomination. These are the defects that must be mentioned in regard to this enterprise.

SAMUEL DE CHAMPLAIN

CHAPTER VII

Fourth undertaking in New France by the Commander de Chaste. Sieur du Pont Gravé chosen for the voyage to Tadoussac. The author undertakes the voyage. Their arrival at the Great Sault St. Louis. Their difficulty in passing it. Their retreat. Death of this commander, which breaks up the sixth voyage.¹

THE fourth undertaking was that of Sieur Commander de Chaste, Governor of Dieppe, who was a very honorable man, a good Catholic, and a great servant of the King. He had served His Majesty worthily and faithfully on many important occasions. And though his head bore the weight of grey hairs, as well as of years, he still wished to hand down to posterity, by this praiseworthy undertaking, his favorable opinion of the design, and even wished to go there himself, to spend his remaining years in the service of God and of his King, by making a home there; with the intention

¹The original has here the Arabic numeral "6." This is inconsistent with the opening line of this summary and with the conclusion of the chapter. Through some inadvertence, probably "6" was set up by the printer instead of "5."

VOYAGES AND EXPLORATIONS

of living and dying there gloriously, as he hoped, if God had not taken him from this world sooner than he expected. One may be very sure that under his management heresy never would have been implanted in the Indies; for he had very Christian plans, of which I could show good proof, as he did me the honor to communicate somewhat of them to me.

After the death of Chauvin, then, he obtained a new commission from His Majesty. Inasmuch as the expense was very great, he formed a company with several gentlemen and principal merchants of Rouen, and of other places, upon certain conditions. When this was done, they had ships equipped, not only for the carrying out of this undertaking, but for discovering and peopling the country. Pont Gravé, with His Majesty's commission (as one who had already made the voyage and knew the difficulties of the passage), was chosen to go to Tadoussac, and promised to go as far as Sault St. Louis,² explore it, and go farther, in order to make a report on his return, and direct a second expedition. And the Sieur Commander left his position as Governor, with

²The Lachine Rapids, just above Montreal. Hereafter, in the text, it will be translated the St. Louis Rapids.

SAMUEL DE CHAMPLAIN

the permission of His Majesty, who loved him specially, to go to the country of New France.

At this time I arrived at court, having just returned from the West Indies, where I had been nearly two years and a half, after the Spaniards had left Blavet,³ and peace was made with France. There, during the wars, I had served His Majesty under Marshal d'Aumont, de Saint Luc, and Marshal de Brissac. As I went to see Sieur Commander de Chaste from time to time, thinking that I could serve him in his purpose, he did me the favor, as I have said, to tell me something about it, and to ask me if I would like to go on the voyage, to see the country, and what the undertakers were doing there. I told him that I was his servant; that as for allowing myself the liberty to go on this voyage I could not do that without the command of His Majesty, to whom I was under obligations, not only from my birth, but by reason of a pension with which he honored me, so that I might have means to support myself at

³Now Port Louis in the department of Morbihan. The Spaniards' surrendered Blavet in June, 1598. Champlain's narrative of his voyage to the West Indies may be read in English in the edition published by the Hakluyt Society in 1859.

VOYAGES AND EXPLORATIONS

court; and that if he wished to speak to him about it, and the King should command me to go, I should find it very agreeable. This he promised me, and he did so, and he received word from His Majesty for me to make this voyage, and to bring him a faithful report of it. To this end, Monsieur de Gesvre, his executive secretary, sent me with a letter addressed to Pont Gravé, telling him to receive me into his ship, and have me see and become acquainted with all I could in these places, and to aid me himself, so far as was possible in this enterprise.

Thus despatched, I left Paris, and sailed in Du Pont's ship in the year 1603. We had a good voyage as far as Tadoussac, with medium-sized barks of from 12 to 15 tons burden, and went a league up the great St. Louis Rapids. Pont Gravé and I got into a very light little boat, with five sailors, so as not to have to navigate a larger one, because of the difficulties. When we had gone a league in a sort of lake with a great deal of trouble, on account of the little water that we found in it, and had reached the foot of the rapids, which empties into this lake, we decided that it would be impossible to go farther with our skiff; for it was so raging and in-

SAMUEL DE CHAMPLAIN

terspersed with rocks that we found ourselves obliged to go almost a league by land to see the upper part of the rapids, and we could not see any more of it. All that we could do was to note the difficulties; the whole country; the length of this river; the reports of savages as to what was in the land; their accounts of the people; the places; the sources of the principal rivers, especially of the great River St. Lawrence.

Then I wrote a short account,⁴ and made an exact map of all that I had seen and observed, and so we returned to Tadoussac, having made but little progress. Our vessels were there trading with the savages; and when this was done we embarked, setting sail, and went back to Honfleur. There we learned the news of the death of Sieur Commander de Chaste, which was a great

⁴Champlain's account of the voyage of 1603 was published in Paris in 1603 under the title: *Des Sauvages, ou Voyage de Samuel Champlain, de Brouage, fait en la France Nouvelle, l'an mil six cens trois*. It was translated into English by Purchas and published in *Purchas His Pilgrims*. London: 1625, vol. vi, pp. 1605-1619. This version is reprinted in the present edition, vol. ii, pp. 151-229. This narrative was newly translated by Professor Otis for the Prince Society edition of *Champlain's Voyages*. See vol. i: 231-291.

VOYAGES AND EXPLORATIONS

affliction to me, for I perceived that it would be difficult for any one else to undertake this voyage without being thwarted, unless he were a Seigneur whose authority had the power to overcome envy.

I scarcely paused at Honfleur, but went on to His Majesty, to whom I showed the map⁵ of this country, with the very careful account that I had written of it. He was much pleased with it, promising not to give up the project, but to have it continued, and to favor it. Thus, the fifth voyage was broken up by the death of this Commander.

I have not noted any defect in this undertaking, as far as the beginning of it was concerned. But I know that immediately several French merchants who had an interest in this business began to complain that the fur trade was closed to them for the purpose of giving it to one man.

⁵This map is no longer extant.

CHAPTER VIII

Voyage of *Sieur de Monts*. Wishes to continue the plan of the late *Commander de Chaste*. Obtains a commission from the king to make discoveries farther south. Forms a company with the merchants of Rouen and Rochelle. The author goes with him. They reach Cape Héve. They discover several harbors and rivers. *Sieur de Pointrincourt* goes with *Sieur de Monts*. Complaints of this *Sieur de Monts*. His commission revoked.

AFTER the death of *Sieur the Commander de Chaste*, *Sieur de Monts*, of Saintonge, of the so-called reformed religion, Gentleman-in-ordinary of the King's Chamber, and Governor of Pons, who had given good service to the King in all the past wars, in whom the King had great confidence, on account of his faithfulness, which he exhibited even unto his death, was carried away by zeal and longing to people and inhabit the country of New France, and there expose his life and his property. He wished to follow in the footsteps of the late *Commander* in that country, where he had been, as I have said, with *Sieur Chauvin*, to explore, although the little that he had seen had made him lose the desire to go to the great River St. Lawrence, having seen

VOYAGES AND EXPLORATIONS

nothing on this voyage but a rugged country. This made him wish to go farther south, to enjoy a softer and more pleasant air. And, not pausing at the accounts of it that had been given to him, he wished to look for a place of which he knew neither the situation nor the temperature, except through the imagination and the reason, which concludes that the nearer the south the warmer the climate. Desiring to carry out this noble undertaking, he got a commission from the King, in the year 1603,¹ to people and inhabit the country, on condition of implanting there the Catholic, Apostolic and Roman faith, letting each one live according to his religion.² That being granted, he continued the company with the merchants of Rouen, Rochelle, and

¹The text has 1623, an obvious misprint. The patent is dated Nov. 8, 1603. It is printed in Les-carbot, *Histoire de la Nouvelle France*, book iv, ch. 1. It is accessible in English in Murdoch's *History of Nova Scotia*, I, 21-24.

²This last clause must refer to the practice of De Monts. There is nothing about religious toleration in the charter. This charter, which made De Monts the King's Lieutenant-General, or Viceroy, in 1603 over the region between the 40th and 46th parallels, i. e., from Philadelphia to Cape Breton, should be compared with the earlier English proprietary grants. In less than three years after

SAMUEL DE CHAMPLAIN

other places, to whom the fur trade was granted by this commission, to the exclusion of all the other subjects of His Majesty. When everything was arranged, Sieur de Monts set sail at Havre de Grace, and had several ships equipped, not only for the fur trade of Tadoussac, but for that of the shores of New France. He got together a number of gentlemen, and all sorts of artisans, soldiers and others, as many of one religion as of another, priests and ministers.

Sieur de Monts asked me if I would like to make the voyage with him. The desire that I had had on the last voyage had increased, and led me to agree to go, with the permission that the King should give me, which would allow me to go, with the understanding that I should make a faithful report to him of all that I saw and discovered. When we all were at Dieppe, we set sail. One ship went to Tadoussac; that of Pont Gravé with the commission of Sieur de Monts, to Canseau, and along the coast toward the Island of Cape Breton, to see those who were violating the regulations.

Henry IV's grant to De Monts, James I granted five-sixths of this same region to the Virginia Company, April 10-20, 1606, absolutely ignoring any French claims and King Henry's patent.

VOYAGES AND EXPLORATIONS

of His Majesty. Sieur de Monts took a lower course toward the shores of Acadie,³ and the weather was so favorable for us that we were only a month in getting as far as Cape de la Héve.⁴ When we arrived there we went on farther to look for a place to settle in, as we did not find this one pleasant. Sieur de Monts delegated me to search for some suitable place, which I did with a certain pilot whom I took with me. We discovered several harbors and rivers, when Sieur de Monts stopped at an island named St. Croix,⁵ of which he thought the site strong, the soil round about very good; the temperature (in latitude 45°) mild. He had his ships come there, and employed each man, according to his station and trade, either to unload them, or to prepare a lodging promptly. When the ships were unloaded he sent them back as speedily as possible, and Sieur de Poutrincourt⁶ (who had come with Sieur de Monts to see the country, with the idea of inhabit-

³Acadie later meant Nova Scotia. Here it means the coast region granted to De Monts between the 40th and 46th parallels.

⁴Cape La Have on modern maps; about fifty miles southwest of Halifax.

⁵Dochet Island, in the St. Croix River.

⁶This name is spelled Poitrincourt in the text, but the accepted form, Poutrincourt, will be used.

SAMUEL DE CHAMPLAIN

ing it, and of securing the grant of some place from him, in pursuance of his commission) returned with them.

But we will let him go, while we see if we shall overcome the cold better than those who wintered at Tadoussac. When our ships had returned to France they heard an infinite number of complaints from the Bretons, the Basques, and others, of the ill-usage and bad treatment that they received on our shores, from the captains of *Sieur de Monts*, who seized them, prevented them from fishing and deprived them of the use of things which had always been free to them; so that if the King did not introduce some regulations there, all this navigation would be lost, and his custom-duties would, in this way, be diminished and their women and children would be made poor and miserable and be obliged to beg for their living. Petitions were sent in with regard to this, but the envy and wrangling did not cease. There was no lack in court of persons who promised that, for a sum of money, *Sieur de Monts*' commission should be annulled. The affair was so conducted that *Sieur de Monts* did not know how to prevent the estrangement of the King toward him, by certain personages in favor, who had promised the King to support

VOYAGES AND EXPLORATIONS

three hundred men in this country. So, in a short time, His Majesty's commission was revoked at the price of a certain sum that a certain personage received, without His Majesty's knowing anything about it.⁷ Such was the recompense for the three years that Sieur de Monts had spent, with an outlay of more than 100,000 livres.⁸ In the first of these three years he suffered a great deal and endured great distress on account of the severe cold and the long duration of snow three feet deep, for five months; although at any time one could reach the shores, where the sea does not freeze, except at the mouth of rivers, which are clogged with ice making its way to the sea. Besides, almost half of his men died from the disease of the country,⁹ and he was obliged to send the remainder of his men back with Sieur de Poutrincourt, who was his lieutenant that year, Pont Gravé having been it the year before.

⁷The King's minister, Sully, revoked the patent in July, 1607. For fuller details see H. F. Biggar, *The Early Trading Companies of New France*, 63-64.

⁸The livre, at this time, contained about as much silver as two francs, and its purchasing value was equal, approximately, to about six francs to-day, or \$1.20. Perkins, *France Under Richelieu and Mazarin*, II, 371.

⁹Scurvy.

SAMUEL DE CHAMPLAIN

These are the plans of *Sieur de Monts* which were broken up. He promised to go farther south to make a settlement that should be healthier and milder than the Island of *St. Croix*, where he had spent the winter. Since that time some people have been at *Port Royal*,¹⁰ where they liked it better, because they did not find the winter so harsh in latitude 45° . To recompense these losses, 6000 livres were ordered given him by the Council of His Majesty, to be taken from the ships that were going to trade for furs.

But to what expense would he have had to be put in all the ports and harbors to collect this sum, to find out who had traded, and the right proportion to be levied on over eighty ships which frequent these shores? It was giving him an endless task, necessitating an expense in excess of the receipts, as he well perceived. For *Sieur de Monts* got almost nothing out of it, and was obliged to let this decree go as he could. This was how these matters were managed by His Majesty's Council. God pardon those whom He has called, and improve those who are living! Heavens! what further enterprise could any one risk, when everything is revoked in this way, without

¹⁰Annapolis Basin, Nova Scotia.

VOYAGES AND EXPLORATIONS

judging maturely of things, before any results can be forthcoming? Those who have the least knowledge make the most complaint and wish to be thought to know more than those who have full experience; and they speak only from envy, or for their own interest, on false reports and appearances, without informing themselves further.

There is something to find fault with in this undertaking: namely, two opposing religions never produce great results for the glory of God among the infidels, whom one wishes to convert. I have seen the minister and our curé come to blows in a religious quarrel. I do not know which was the more courageous, or which gave the better blow, but I know very well that the minister complained sometimes to *Sieur de Monts* of having been beaten, and they ended the controversy in this way. I will leave you to judge if it was a pleasant sight; the savages were sometimes on one side, sometimes on the other, and the French mixed in according to their respective beliefs, and reviled first one and then the other religion, although *Sieur de Monts* made peace as much as he could. These insults were really a means to the infidel of making him still more hardened in his infidelity.

SAMUEL DE CHAMPLAIN

Now, since Sieur de Monts did not wish to go to live on the St. Lawrence River, he ought to have sent some one to explore a place suitable for the foundation of a colony, which would not be liable to be abandoned like that of St. Croix, and Port Royal, where no one knew the place; and he ought to have expended from four to five thousand livres, so as to be sure of the place, and even to have had some one pass a winter there, in order to get acquainted with the climate. If that had been done, there is no doubt at all that the soil, and the warmth such as would have been found in a good climate, would have induced the settlers to stay there. And even if Sieur de Monts's commission had been revoked they would not have given up living in the country within three years and a half, as was done in Acadie, but enough ground would have been cleared to enable them to send commodities to France. If these matters had been well managed, little by little we should have adapted ourselves to the situation, and the English and the Flemish would not have got the benefit of places that they took from us, where they have settled to our loss.¹¹

It will not be out of place to gratify the

¹¹Champlain refers to the English settlements in

VOYAGES AND EXPLORATIONS

curious reader, and especially those who make sea voyages, with a description of the discoveries of these coasts during three years and a half while I was in Acadie, both at the settlement at St. Croix, and at Port Royal, when I had opportunity to see and discover everything, as will be seen in the following book.

BOOK II

CHAPTER I

Description of la Héve. Of Port Mouton. Of Cape Negro. Of the Cape Sable and Sable Bay. Of Cormorant Island. Of Cape Fourchu. Of Long Island. Of Bay Saint Mary. Of Port Saint Margaret, and of all the remarkable things that there are along the coast of Acadie.

CAPE LA HÉVE¹ is a place where there is a bay containing several islands covered with firs, and a great tract of oaks, young elms and birches. It is on the coast of Acadie, in latitude $44^{\circ} 5'$, and the declina-

New England and to the Dutch occupation of New Netherland.

¹Cape La Have, some twenty miles west of Lunenburg, Nova Scotia.

SAMUEL DE CHAMPLAIN

tion of the compass was $16^{\circ} 15'$,^{1*} 75 leagues northeast of Cape Breton.

Seven leagues from this cape is another called Port Mouton², where are two little rivers in latitude 44 degrees and some minutes, where the soil is very stony and filled with undergrowth and heather. There are a great many rabbits there, and there is a good deal of game, because of the ponds which are there.

Going along the coast one sees a very good harbor for vessels, and in the interior a little river, which goes pretty far into the land. I named it the harbor of Cape Negro,³ because of a rock which, from a distance, resembles one. It rises above the water near a cape where we went the same day, which is four leagues from it, and ten leagues from Port Mouton. This

^{1*}Before the invention of the chronometer the exact determination of longitude was impossible. Champlain adopted the method of determining location by giving the latitude and indicating the declination of the needle from the true north. It was supposed that in this way the longitude could be determined approximately. Champlain's explanation of his system and his method of drawing his maps will be found in *Voyages of Champlain*, Prince Society edition, III, 219-224, and in Laverdière, *Voyages, 1613*, p. 270, ff.

²The name is still in use.

³Negro Harbour.

VOYAGES AND EXPLORATIONS

cape is very dangerous, on account of the rocks which project into the sea. The coasts that I saw up to that point are all low, covered with the same wood as that at Cape la Héve, and the islands are all full of game. Going along farther we passed the night at Sable Bay, where the ships can anchor, without any fear of danger.

Cape Sable, two good leagues from Sable Bay, is also very dangerous, on account of certain rocks and reefs that extend almost a league into the sea. From there one goes to Cormorant Island, which is a league from it, so named because of the infinite number of these birds that are on it; and we filled a large barrel with their eggs. From this island, going west about six miles, crossing a bay which runs up two or three leagues to the north, one comes upon several islands that project two or three leagues into the sea, of which the area of some is perhaps two, of others three leagues, and of others less, as far as I could judge. Most of them are very dangerous to approach in large vessels, on account of the high tides and the rocks which are on a level with the water. These islands are covered with pine trees, firs, birches and aspens. A little farther on there are four more.

SAMUEL DE CHAMPLAIN

On one of them there are so many of the birds called penguins that one can easily kill them with a stick. On another there are sea wolves.⁴ On two others there is such a quantity of birds of different varieties that one who had not seen them could not imagine them, such as cormorants, ducks of three kinds, geese, *marmettes*,⁵ bustards, sea parrots, snipe, vultures, and other birds of prey; sea gulls, dunlins of two or three species; herons, large sea gulls, curlews, sea pyes, divers, ospreys, *appoils*, crows, cranes, and other kinds, which make their nests there. I named them Seal Islands.⁶ They are in latitude $43\frac{1}{2}^{\circ}$, distant from the mainland, or Cape Sable, four or five leagues. From there we went to a cape that I called Forked Harbor,⁷ since such was its shape, distant from the Seal Islands

⁴Seals. Commonly called sea wolves by the early navigators. Slafter. *Loup marin* will, after this, be rendered "seals" in this translation.

⁵This word is not given in the dictionaries. In many cases the identification of animals and birds and plants mentioned by the early explorers is very difficult and requires the expert knowledge of the naturalist. American fauna and flora were generally given the names of those European fauna and flora which they most resembled.

⁶The name is still in use.

⁷Port Fourchu. The name survives in Cape Fourchu. It is just west of Yarmouth.

VOYAGES AND EXPLORATIONS

of seals from five to six leagues. This harbor is very good for ships at the entrance, but inside it is almost entirely dry at low tide, except the channel of a little river, all surrounded by meadows which make this place rather pleasant. Cod fishing is good there near the harbor. We went north ten or twelve leagues without finding any harbor for our ships, only a number of coves, or very fine beaches, where the land seemed suitable for cultivation. The woods there are very beautiful, but they contain very few pines and firs. This coast is very safe, without islands, rocks, or shallows; so that, in my judgment, ships can go there with confidence. A quarter of a league from the coast I came to an island, which is called Long Island, lying north northeast and south southwest, which makes a passage to the Great French Bay,⁸ so named by De Monts.

This island is six leagues long, and in some places nearly one league wide, and in other places only a quarter of a league. It is covered with a quantity of wood, such as pines and birches. The whole coast is bordered with very dangerous rocks, and there is no place suitable for ships, except that at the end of the island there are several refuges for shallops, and two or three

⁸The Bay of Fundy.

SAMUEL DE CHAMPLAIN

rocky islands, where the savages hunt seals. The tides run very high there, particularly at the little passage of the island, which is very dangerous for vessels, if they venture going through it.

Going northeast two leagues from the passage of Long Island, one finds a cove where ships can anchor in safety. It is a quarter of a league in circumference. Its bottom is nothing but mud, and the land surrounding it is all bordered with rather high rocks. In this place, according to the report of a miner, called Master Simon, who was with me, there is a very good silver mine.⁹ Some leagues farther there is a little river, called the Boulay,¹⁰ where the tide comes half a league inland, at the entrance of which one can easily anchor ships of a hundred tons burden. A quarter of a league from this place there is a good harbor for vessels where we found an iron mine, which the miner thought yielded fifty per cent. Sailing three leagues farther to the northeast, one comes upon another rather good iron mine, near which there is a river surrounded by fine, pleasant meadows. The soil round about is as red as blood. Some leagues farther along there is

⁹Little River on Digby Neck. Slafter.

¹⁰Sandy Cove.

VOYAGES AND EXPLORATIONS

another river which is dry at low tide, except its channel, which is very small.¹¹ This runs near Port Royal. At the upper end of this bay there is a channel which is also dry at low tide. About it are a number of fields and good lands to cultivate, although covered with a quantity of beautiful trees of all kinds, as I have said above. This bay, from Long Island to the upper end, may extend about six leagues. All the coast of the mines is rather high ground, intersected by capes, which appear round and project a little into the sea. On the other side of the bay, to the southeast, the land is low and good, and there is a very good harbor, and at its entrance a bar over which one must go, where, at low tide, the water is a fathom and a half deep. When one has passed this he finds three fathoms and a good bottom. Between the two points of the harbor there is a pebbly island which is covered at high tide. This place extends half a league into the land. The tide there goes down three fathoms, and there are quantities of shellfish there, such as mussels, snails and cockles. The soil is the best that I have seen. I called this harbor the

¹¹“South Creek, or Smelt River, which rises near Annapolis Basin, or the Port Royal Basin of the French.” Slafter.

SAMUEL DE CHAMPLAIN

harbor of Saint Margaret.¹² All this south-east coast is much lower land than that of the mines, which are only a league and a half from the coast of Port Saint Margaret, the width of the bay, which is three leagues at its entrance. I measured the altitude at this place, and I found it was in latitude $45\frac{1}{2}^{\circ}$ and a little more, and the declination of the needle was $17^{\circ} 16'$. This bay was named Saint Mary Bay.

CHAPTER II

Description of Port Royal, and its peculiarities. Of High Island. Of the Harbor of Mines. Of the Great French Bay. Of the River Saint John, and what we have noticed between the Harbor of Mines and this place. Of the Island called by the savages Manthane. Of the Etechemins River, and several beautiful islands in it. Of Saint Croix Island, and other conspicuous things on this shore.

PASSING¹ Long Island, with the cape six leagues to the northeast, one comes to a cove where ships can drop anchor in 4, 5,

¹²Weymouth Harbour.

¹This chapter begins another exploring trip, and the narrative is taken up at the farthest point reached in the earlier exploration. For the intermediate events see *Voyages of Champlain*, Prince Society edition, II. 18-21.

VOYAGES AND EXPLORATIONS

6 and 7 fathoms of water. The bottom is sand. This place serves only as a roadstead. Continuing two leagues in the same direction we enter one of the most beautiful harbors in this whole coast, where a great number of ships could go in safety. The mouth is 800 paces wide and 25 fathoms deep; it is two leagues long and one league wide. I named it Port Royal.² Three rivers empty into it, one of which is rather large. It comes from the east, and is called the River *Esquille*, the name of a little fish the size of a smelt which it yields in great quantity. Herring are also caught there, and other kinds of fish of which there is an abundance in their season. This river is almost a quarter of a league wide at the mouth, where there is an island, perhaps half a league in circumference, covered with wood, like all the rest of the land, such as pines, firs, spruces, birches, aspens, and some oaks, though comparatively few. This river has two mouths, one on the north shore, the other on the south of the island. That on the north is the better. There ships can drop anchor in the shelter of the island in 5, 6, 7 and 8 fathoms of water. But one must guard against certain shallows near the island and the mainland, which

²Annapolis Basin.

SAMUEL DE CHAMPLAIN

are very dangerous if one does not know the channel.

I went 14 or 15 leagues up the river, where the tide rises, and it is not navigable much farther inland. At this place it is 60 paces wide and about $1\frac{1}{2}$ fathoms deep. The land about this river is covered with a great number of oak, ash and other trees. Between the mouth of the river and the place where we were, there are many meadows, but they are flooded by the high tides. They are crossed by many little brooks, on which shallops and boats can go in high water. Within the harbor there is another island, nearly two leagues away from the first, where there is another little river which runs a good way inland. I named this one the River St. Anthony.³ Its mouth is about four leagues across the woods from the end of Saint Mary Bay. As for the other river, it is only a brook filled with rocks, which one could not ascend in any way whatever, for lack of water.⁴ This place is in latitude 45° , and the declination of the needle is $17^{\circ} 8'$.

Leaving Port Royal and going 8 or 10 leagues to the northeast of the cape, along

³Bear River.

⁴Sometimes called Moose River and sometimes Deep Brook. Slafter.

VOYAGES AND EXPLORATIONS

the coast of Port Royal, I crossed a part of the bay, some 5 or 6 leagues, to a place that I named the Cape of Two Bays,⁵ and passed by an island which is one league from it and is also one league in circumference. It rises some 40 or 45 fathoms in height and is all surrounded by great rocks; except in one place, where there is a slope, with a salt-water pond at the foot. The water comes in below a pebbly point in the form of a spur. The top of the island is flat, covered with trees, and it has a very beautiful spring. In this place there is a copper mine. From there I went to a harbor a league and a half from it, where there is also a copper mine. This harbor is in latitude 45 2-3 degrees. It is dry at low tide. To enter, it is necessary to place buoys and to mark the sand bar at the mouth, which extends along a channel parallel with the mainland on the other side. Then one enters a bay, which is almost a league long and half a league wide. In some places the bottom is muddy and sandy, and vessels can run aground there. The sea there rises and falls from four to five fathoms. This Cape of Two Bays, where the harbor of mines is situated, is so called because to the north and the south of the

⁵Cape Chignecto.

SAMUEL DE CHAMPLAIN

cape there are two bays which run up east northeast and northeast some 12 to 15 leagues;⁶ and there is a strait at the opening of each bay not more than half a league wide. Beyond the strait it suddenly widens to about 3, 4 or 5 leagues.⁷ There are also several islands in this bay, where there are ponds, and two or three little rivers which flow into it, by which the savages go in their canoes to Tregaté, and to Misamichy in the Gulf of Saint Lawrence, partly by water, partly by land.

All the country that I saw after the little passage on Long Island, sailing along the coast, is nothing but rocks, with no place where ships could go in safety, except Port Royal. The country is covered with a quantity of pines and birches, and, in my opinion, it is not especially fertile.

We went west two leagues to the Cape of Two Bays, then north five or six leagues and crossed the other bay.⁸ Going west some six leagues one finds a little river,¹⁰ at the mouth of which is a rather low cape, which projects into the sea; and somewhat inland a mountain the shape of a Cardinal's

⁶Chignecto Bay and Basin of Mines.

⁷That is, Chignecto Bay.

⁸Chignecto Bay.

¹⁰Quaco River.

VOYAGES AND EXPLORATIONS

hat.¹¹ In this place there is an iron mine, and there is no anchorage, except for shallops. Four leagues west southwest there is a rocky point,¹² which projects a little seaward, where there are very great tides which are very dangerous. Near this point there is a cove about half a league in circumference, in which there is a very good iron mine. Four leagues farther along there is a beautiful bay, which cuts into the land and has within it three islands and a rock. Two of the islands are one league west of the cape,¹³ and the other is at the mouth of one of the largest, deepest rivers that I had yet seen, which I called the River Saint John, because it was on that day that I arrived there,¹⁴ and which is called by the savages Ouygoudy.¹⁵ This river is dangerous, if one is not familiar with certain points and rocks on both banks. It is narrow at its mouth, then begins to widen and, having doubled its swiftness, narrows once

SAMUEL DE CHAMPLAIN

more and makes a sort of fall between two big rocks, where the water flows with such rapidity that if one throw a piece of wood into it, it is sucked to the bottom and one sees it no more; but, by waiting for high tide¹⁶ one can go through this strait easily, and then it widens to about a league in some places, and contains three islands, on which there are a great many meadows and beautiful trees, such as oaks, beeches, walnuts,¹⁷ and wild grapevines. The inhabitants of the country go by this river as far as Tadoussac, which is on the great River Saint Lawrence, and cross but little land to get there. It is 65 leagues from the River St. John to Tadoussac. At its mouth, which is in latitude 45 2-3 degrees, there is an iron mine. Shallops cannot go more than fifteen leagues in this river, because of the rapids, which can be navigated only by using the canoes of the savages.

From the River St. John I went to four islands, on one of which was a great quantity of birds called magpies. Their young are as good as young pigeons. This island is three leagues from the mainland. Farther west there are other islands: among

¹⁶It is passable only at half tide, G.

¹⁷Professor Ganong believes that *noyers* means butternuts here.

VOYAGES AND EXPLORATIONS

them one having an area of six leagues, which is called by the savages Menane.¹⁸ At the south of this there are, among the islands, several harbors suitable for ships. From the Magpie Islands I went to a river in the mainland called the River of the Etechemins, from a tribe of savages so called in their country, and we passed by such a number of beautiful islands that I could not count them. Some had an area of two leagues, some three, others more or less. They are all in a bay,¹⁹ in my judgment of more than fifteen leagues in circumference, with several good places for as many ships as one would wish. Round about there is good fishing: cod, salmon, bass, herring, halibut and other fishes in great number. Going west northwest, three leagues past the islands, one enters a river, almost half a league wide at its mouth,²⁰ in which there are two islands one or two leagues further up: one very small,²¹ near the mainland on the west; and the other in

¹⁸Grand Manan. Champlain used the form Manthane in his first account (1613), and that name is given in the heading to this chapter. Laverdière says that Menane is the true name.

¹⁹Passamaquoddy Bay.

²¹Little Dochet (pronounced "Doshay"), G.

SAMUEL DE CHAMPLAIN

the middle.²² The latter has a circumference of eight or nine hundred paces and rises out of the water three or four fathoms high, with rocky sides, except in one small place where there is a little point of sand and clayey soil, useful for making bricks and other necessary things. There is another sheltered place for ships of from eighty to a hundred tons, but it is dry at low tide. The island is covered with firs, birches, maples and oaks. It is in itself a very good site, and there is but one stretch of about forty paces where its sides are lower, and that is easy to fortify. The shores of the mainland being distant from each other on both sides from about nine hundred to a thousand paces, ships could not pass up the river without being at the mercy of the cannon from the island, which is the place that we believed to be the best, whether for situation, the excellence of the soil, or for such intercourse as it is proposed to have with the savages of these shores and inland. For it is in the midst of those whom we hope to pacify in time, abolishing the wars that they have with one another, in order both to obtain service from them and to convert them to the Christian faith. This place was named, by

²²Dochet, G.

VOYAGES AND EXPLORATIONS

De Monts, St. Croix Island.²³ Going farther up, one sees a large bay,²⁴ in which there are two islands—one high, the other flat—and three rivers, two of medium size, of which one flows in from the east and the other from the north, and the third, a large one, flowing in from the west:²⁵ that is the River of the Etechemins. Two leagues up this there is a rapid, where the savages carry their canoes on the land about 500 paces. Then they enter the river again. From there, after crossing a bit of land, one comes to the River Norembegue,²⁶ and the St. John. The place where the rapid is ships cannot get through, on account of its being nothing but rocks, and of there being only four or five feet of water. In May and June there are such big catches of herring and bass that one could load boats there with them. The soil is of the finest, and there are 15 or 20 acres of cleared land. The savages sometimes go there five or six

²³For a most complete study of St. Croix Island and the part it played in diplomatic controversy see W. F. Ganong, *Dochet (St. Croix) Island*, Transactions of the Royal Society of Canada, 2d series, vol. viii, sect. 4, 127-231. This monograph is fully illustrated with maps, plans and photographs.

weeks during the fishing season. All the rest of the country is covered with very thick forests. If the land were cleared, grain would grow very well. This place is in latitude 45 1-3 degrees, and the variation of the needle is 17° 32'. A settlement was made in this place in the year 1604.²⁷

CHAPTER III

Of the coast, peoples, and river of Norem-begue.

CONTINUING¹ from the St. Croix River along the coast about 25 leagues, we passed a great quantity of islands, banks, reefs and rocks, which project more than four leagues into the sea in some places. I called them the Ranges. Most of them are covered with pines and firs, and other poor kinds of wood. Among these islands there are a great many good, fine harbors, but they are not attractive. I went near an island about four or five leagues long. The distance from this island to the mainland on the

²⁷Champlain, in this narrative, omits the story of the establishment of this settlement. For it see *Voyages of Champlain*, Prince Society Ed., II, 34-38.

¹This exploring trip was begun Sept. 2, 1604. *Voyages of Champlain*, II, 38.

VOYAGES AND EXPLORATIONS

north is not a hundred paces. It is very high with notches here and there, so that it appears, when one is at sea, like seven or eight mountains rising close together. The tops of most of them are without trees, because they are nothing but rock. The only trees are pines, firs and birches. I called it the Island of the Desert Mountains.² It is in latitude $44\frac{1}{2}^{\circ}$.

The savages of this place, having made an alliance with us, guided us on the Pemetegoit River,³ so called by them, and told us that their captain, named Bessabez, was the chief of the river. I think that this river is the one which several pilots and historians call Norembegue, and which most of them have described as large and spacious, with a great number of islands, and having its mouth in latitude 43° and $43\frac{1}{2}^{\circ}$, and others in latitude 44° , more or less.⁴ As for the variation of the needle I never have read anything about it, or

²*Isle des Monts Déserts*. Mount Desert Island. It was discovered Sept. 5, 1604.

³The Penobscot, Sept. 7. The name Penobscot is a corruption of one of the Indian names, for which see Slafter in *Voyages of Champlain*, II, 40, and Laverdière, *Œuvres de Champlain, Voyage de 1613*, 31.

⁴Actually a little over 44° . The text follows here the reading of the 1613 text.

SAMUEL DE CHAMPLAIN

heard any one speak of it. It has been said also that there is a large city, well populated with savages who are skillful and expert making use of cotton thread. I am confident that most of those who mention them did not see them, and speak from what they heard from those who knew no more about them than they did.⁵ I know very well that there are some people who may have seen the mouth of it, because, as a matter of fact, there are a quantity of islands, and it is in latitude 44° , at its mouth, as they say. But there is nothing to show that any one ever entered it, for they would have described it in a different way, so that so many people would not doubt it. I shall state, then, what I discovered and saw from the beginning, as far as I went.

In the first place, at its mouth, 10 or 12 leagues from the mainland, there are several islands, which are in latitude 44° , and in $18^{\circ} 40'$ of the declination of the needle. The Island of Mount Desert makes one of the points at its mouth, and lies toward the

⁵Champlain probably refers to the account of the city of Norumbega, which was contained in *Histoire Universelle des Indes Occidentales*, Douay, 1607, and to that of Jean Alfonse. Both these are quoted and refuted by Lescarbot, *Histoire de la Nouvelle France*, ed. Tross, II, 470-473.

VOYAGES AND EXPLORATIONS

east; and the other is low land, and is called by the savages Bedabedec.⁶ It is west of this, and they are nine or ten leagues apart; and nearly in the middle of the sea there is another island which is so high and striking that I named it Isle Haute.⁷ All about there is an infinite number of them, of varying sizes, but the largest is that of Mount Desert. The fishing for different kinds of fish is very good there, as is also the hunting for game. Three or four leagues from the point of Bedabedec,⁸ following the mainland to the north, through which this river flows, are some very high hills which, in fine weather, can be seen 12 or 15 leagues out at sea.⁹ Proceeding on the south side of Isle Haute, sailing along it about a quarter of a league, where there are some reefs which are out of the water, heading to the west until all the mountains that are north of this island are opened up, you can feel sure that when you see the eight or nine summits of Mount Desert Island, and that of Bedabedec, you will be opposite the River of Norembegue. In order to go into it, it is necessary to head the ship to the

⁶The region about Rockland and Camden, Slafter.

⁷The name is still used.

⁸Owl's Head.

⁹The Camden Hills.

SAMUEL DE CHAMPLAIN

north, which is over the highest mountains of this Bedabedec, and you will not see any islands in front of you; and you can enter safely, with plenty of water, although you see a quantity of breakers, islands and rocks east and west of you. You must avoid them with the lead in hand; and I think, from what I have been able to judge, that one cannot enter this river at any other place, except with small vessels or shallops; for (as I have said above) the quantity of islands, rocks, shallows, banks and breakers is such everywhere that it is strange to see.

Now, to return to our route, at the entrance of the river there are some beautiful islands which are very pleasant like meadows. I went as far as a place to which the savages guided us, where it is not more than an eighth of a league wide, and some two hundred paces from the land, on the west, there is a rock, level with the water, which is dangerous.¹⁰ From there to Isle Haute it is fifteen leagues: and from this narrow place (which was the narrowest that we had found), after making about seven or eight leagues, we came upon a little river, near which we had to anchor, inasmuch as in front of us we saw a quantity of rocks visible at low water; and also

¹⁰Fort Point Ledge, near Castine.

VOYAGES AND EXPLORATIONS

because, if we had wished to go farther, it would have been impossible to make half a league, on account of a waterfall there, which came down a slope seven or eight feet. I saw it from a canoe with the savages that we had with us, and found only enough water there for a canoe. But beyond the falls, which are about two hundred paces wide, the river is beautiful and delightful as far as the place where we anchored. I went ashore to see the country, and, as far as I went, going hunting, I found it pleasant and agreeable. The oaks there seemed to have been planted for pleasure. I saw few firs, but a good many pines on one bank of the river; on the other it was all oaks, and a little brushwood which spread a good way inland; and I will say that from the entrance to where I went, which was about 25 leagues,¹¹ I did not see any city, or village, or appearance of there having been any, although there were one or two cabins of the savages, with no one in them, which were made in the same way as those of the Souriquois,^{11*} covered with the bark of trees; and, as far as I could judge, there are not many savages on this

¹¹Champlain went up to the present site of Bangor.

^{11*}The Micmacs of Nova Scotia.

SAMUEL DE CHAMPLAIN

river, which is called Pemetegoit. They do not come there any more than to the islands except some months in summer, during the season for fishing and hunting, which are very good there. They are a people who have no fixed habitation, as far as I have found out and learned from them: for they winter sometimes in one place, sometimes in another, where they see that the hunting for wild beasts is better; for they live from it as necessity compels, without having anything in reserve for times of scarcity, which is sometimes very great.

Now, this river must necessarily be the Norembegue; for, going past it as far as latitude 41° , to which I coasted along, one sees no other in the latitudes above mentioned, except that of the Quinibequy,¹² which is almost as high up, but not of so great length. On the other hand, there cannot be any other which rises far inland, inasmuch as the great River Saint Lawrence runs along the coast of Acadie and of Norembegue, and there is not more than 45 leagues of land between them, or 60 at the widest place in a straight line.

Now I will leave this discourse, to return to the savages who took me to the falls of the Norembegue River. They went to in-

¹²The Kennebec.

VOYAGES AND EXPLORATIONS

form Bessabez, their chief, and other savages, who went on another little river to inform theirs, named Cabahis, and tell him of our arrival.

On the sixteenth of the month,¹³ about thirty savages came to us, on the assurance of those who had served us as guide. This Bessabez came also to find us that same day, with six canoes. As soon as the savages who were on land saw him coming, they all fell to singing, dancing and jumping until he was ashore; then afterward they all sat down on the ground in a circle, according to their custom when they wish to make a speech, or have a feast. Soon after Cabahis, the other chief, arrived also with twenty or thirty of his companions, who withdrew to one side and greatly enjoyed looking at us, for it was the first time that they had seen Christians. Some time afterward I went ashore with two of my companions and two of our savages, who served us as interpreters, and ordered those on our boat to approach the savages and have their arms ready for use if they noticed any movement among these people against us. Bessabez, seeing us ashore, had us sit down, and began to smoke with his companions, as they usually do before mak-

¹³September, 1604.

SAMUEL DE CHAMPLAIN

ing their speeches, and made us presents of venison and game.¹⁴ All the rest of the day and the night following, they did nothing but sing, dance and make good cheer, until the dawn. Then each one returned, Bessabes with his companions on his side, and we on ours, well satisfied at having made the acquaintance of these people.

On the seventeenth of the month I took the altitude and found the latitude was $45^{\circ} 25'$.¹⁵ This done I departed, to go to another river called Quinibequy,¹⁶ 35 leagues away from this place and almost 15 from Bedabedec. This tribe of savages of Quinibequy is called Etechemins as well as those of Norembegue.

The eighteenth of the month I went near a little river where Cabahis was. He came with us in our boat about 12 leagues. I asked him where the River Norembegue came from, and he told me that it comes from beyond the fall which I have mentioned above, and that after going some distance on it one enters a lake, by way of

¹⁴In preparing this narrative Champlain omitted the account of the negotiations given in the narrative of 1613. *Voyage de 1613*, 36-37; *Voyages of Champlain*, II, 46.

¹⁵The correct latitude should have been $44^{\circ} 46'$. S.

¹⁶The Kennebec.

VOYAGES AND EXPLORATIONS

which they go to the St. Croix River, a small part of the way by land; then they enter the Etechemins River.¹⁷ Besides, another river flows into the lake, and on it they go several days, and then enter another lake, and they go through the middle of this, and, when they reach the end, they go some distance by land, and afterward enter a little river which flows into the great St. Lawrence River.¹⁸ All these people of Norembegue are very tawny, dressed in beaver skins and other furs, like the Canadian and Souriquois¹⁹ savages, and they have the same way of living.

This is an exact statement of all that I observed, whether of the coasts, the people, or the River Norembegue, and not of the marvels that any one has written about them. I believe that this place is as agreeable in winter as St. Croix.

¹⁷By the east branch of the Penobscot, the Matawamkeag River.

¹⁸By the Penobscot to the northwest through Lake Pemadumcook, and next through Lake Chesuncook, etc., till the upper waters of the Chaudière were reached. Champlain failed to understand that the lake entered by way of the Matawamkeag, going toward the St. Croix, was different from the one passed through going toward Quebec.

¹⁹The Micmacs.

SAMUEL DE CHAMPLAIN

CHAPTER IV.

Discovery of the Quinibequey River, which is on the coast of the Almouchiquois, as far as latitude 42° , and the particulars of the voyage. How the men and women pass the time during the winter.

SKIRTING the coast westward¹ one passes the mountains of Bedabedec, and we saw the mouth of the river, where one may approach with large ships, but where there are some shallows that one must avoid, lead in hand. Going about eight leagues, running westward along the coast, we passed a number of islands and rocks jutting out a league into the sea, and went as far as an island ten leagues from Quinibequey. At the entrance of this river there is a rather high island, which we named the Tortoise,² and between this and the mainland there are some scattering rocks, which are covered at high tide; nevertheless, one always sees

¹Champlain here omits the incidents of the first winter of the colony, 1604-05. For them see *Voyages of Champlain*, II, 49-55; Laverdière, *Voyage de 1613*, 40-45. The narrative now takes up the explorations of the summer of 1605, where the exploration of 1604 stopped.

²Seguin Island, reached July 1.

VOYAGES AND EXPLORATIONS

the water break above them. Tortoise Island and the river lie south southeast, and north northwest. At the entrance there are two medium-sized islands—one on one side, and the other on the other; and some 300 paces inward there are two rocks, where there are no woods, but there is a little grass. We anchored 300 paces from the mouth, in five or six fathoms of water. I decided to go inland, to see the upper part of the river and the savages who live there. When we had gone some leagues our boat came near being lost on a rock that we grazed in passing. Farther along we met two canoes which had come for hunting birds which, for the most part, are moulting at that season and cannot fly. We accosted these savages, and they guided us. Going on farther to see their captain, called Manthoumermer, when we had made from seven to eight leagues, we passed by certain islands, straits and brooks, which flow into the river, where I saw some beautiful meadows. And when we had coasted along an island about four leagues in length, they led us to where their chief was with twenty-five or thirty savages.³ As soon as we had an-

³At Wiscasset Harbor. For Champlain's route after entering the mouth of the Kennebec see Slafter in *Voyages of Champlain*, II, 58.

SAMUEL DE CHAMPLAIN

chored he came to us in a canoe a little apart from ten others which accompanied it. Drawing near to our boat he made a speech, in which he made it clear that he was glad to see us, and that he wished to have our alliance, and make peace with their enemies with our help, saying that the next day he would send to us two other savage captains who were in the interior—one called Marchim and the other Sasinou, chief of the Quinibequy River.

The next day they guided us down the river by another way than that by which we came, to go to a lake; and passing some islands each of them left an arrow near a cape⁴ by which all the savages pass. They think that, if they do not do that, some misfortune will befall them, so the devil makes them believe; and they live in this superstition, as they do in many others.

Beyond this cape we passed a very narrow rapid, but not without great difficulty; for, although we had a good, fresh wind and filled our sails with it as much as possible, we could not get through in that way, and were obliged to fasten a hawser to some trees and to pull on it. Thus we managed to get through by the strength of our arms, aided by the favorable wind.

⁴Hockomock Point.

VOYAGES AND EXPLORATIONS

The savages who were with us carried their canoes on the land, as they could not get them through with paddles. After having cleared this rapid we saw some beautiful meadows. I was very much astonished with regard to this rapid, because when we went along with the tide ebbing we had it in our favor, but when we were at the rapid we found it against us, and after we had passed the rapid the tide was ebbing, as before, for which we were very glad.⁵

Following our route we came to the lake,⁶ from three to four leagues long, where there are some islands. Two rivers flow into it—the Quinibequy, which comes from the north northeast,⁷ and the other from the northwest, by which Marchim and Sasinou were expected. When we had waited for them all that day and saw that they were not coming, we decided to make some use of the time. We weighed anchor, and two savages came with us from this lake to guide us, and this day we anchored at the mouth of the river, where we caught a quantity of various kinds of good fish. Meantime our savages went hunting, but

⁵For an explanation of this curious phenomenon see Slafter's note in *Voyages of Champlain*, II, 59.

⁶Merrymeeting Bay.

⁷The Androscoggin.

SAMUEL DE CHAMPLAIN

failed to return. The way by which we descended that river is much safer and better than that by which we had come. Tortoise Island, which is at the mouth of that river, is in latitude 44° , and the declination of the needle is $19^{\circ} 12'$. About four leagues from there, in the sea, toward the southwest, are three little islands where the English fish for cod. One can go from this river⁸ across the land as far as Quebec, some 50 leagues, without passing more than one portage of two leagues. Then one enters another little river⁹ which empties into the great River St. Lawrence. This Quinibequy river is very dangerous for ships for half a league, because there is so little water, and there are big tides, rocks and shallows as much outside as within it. There would be a good channel if it were well explored. The little that I saw of the country along the banks of this river is very poor, for there is nothing but rocks on all sides. There is a quantity of small oaks and very little tillable ground. There is an abundance of fish here, as in the other rivers mentioned above. The people live like those of our settlement, and tell us that the savages who plant Indian corn are very far inland, and that they have

⁸The Kennebec.

⁹The Chaudière.

VOYAGES AND EXPLORATIONS

given up doing so on the shores, on account of the war that they had with the others, who took it from them. This is what I have been able to learn of this place, which I do not believe is any better than the others.

The savages that live on all these shores are very few in number. During the winter, if there is a great deal of snow, they hunt the moose,¹⁰ and other animals, upon which they live most of the time; and if there is not much snow it is not to their advantage, inasmuch as they cannot get anything without excessive labor, which causes them to endure and suffer a great deal. When they do not hunt they live on a shellfish which is called the clam. They dress themselves in winter in good furs of the beaver and the moose. The women make all the clothes, but not so neatly but that one sees the flesh under the arms, for they are not skillful enough to make them fit better. When they go hunting they take a kind of racket, twice as big as those on our side of the water, which they attach to their feet, and they can go on the snow in this way without sinking in; the women and children, as well as the men, looking for the tracks of animals. Then, when they have

¹⁰*Eslans*, elk, here means moose; usually called by its Indian name, *orignac*.

SAMUEL DE CHAMPLAIN

found them, they follow them until they see the beast, and then they shoot at it with their bows, or kill it with stabs of swords fastened to the end of a short pike staff, which is easily done, since these animals cannot walk on the snow without sinking into it. Then the women and children come to the place and make a hut there, and give themselves a feast. Afterward they return to see if they can find others.

Coasting along by the shore we anchored behind a little island near the mainland,¹¹ where we observed more than eight savages running along the shore to see us; dancing and signifying the pleasure that they felt. I visited an island, which is very beautiful on account of what grows on it, for there are beautiful oaks and walnuts, the land is cleared, and there are many vines, which bear beautiful grapes in their season—they were the first that I had seen on all these shores since I was at Cape la Héve. We called it the Isle of Bacchus.¹² When the tide was high we weighed anchor and en-

¹¹Stratton Island. A short passage occurs just before this in the 1613 narrative which records the sight of some high mountains to the west, which are identified as the White Mountains. Cf. Slaf-ter's note in *Voyages of Champlain*, II, 61.

¹²Richmond Island. S.

VOYAGES AND EXPLORATIONS

tered a little river, where we could not go before, inasmuch as it is a bar harbor and has only half a fathom of water at low tide, a fathom and a half when the sea is at half tide, and two fathoms when it is high. When one is within it one finds 3, 4, 5 and 6 fathoms. **When we had anchored**, a lot of savages came to the bank of the river and began to dance.¹³ Their captain at the time, whom they called Honemechin, was not with them. He arrived about two or three hours afterward with two canoes. Then he went off, circling all about our boat. These people shave the hair on the top of their heads rather high up and wear the rest very long, combing and twisting it in the back in various ways very neatly with feathers that they fasten to the head. They paint their faces black and red, like other savages that I have seen. They are an active people, with well-formed bodies. Their weapons are pikes, clubs, bows and arrows, on the end of which some put the tail of a fish called the *signoc*,¹⁴ others use bone, and

¹³These Indians Champlain calls Almouchiquois in his earlier narrative, *Voyages*, II, 63. They are the same as the Massachusetts of the early English settlers.

¹⁴The horseshoe crab. Champlain gives a picture of this shellfish in his map of 1612.

SAMUEL DE CHAMPLAIN

still others have them all of wood. They till and cultivate the ground, which we had not seen done before. Instead of ploughs they have an instrument of wood, very strong, made like a spade. The inhabitants of the country call this river the Choüacoet.¹⁵

I went ashore to see their tillage on the bank of the river, and I saw their corn, which is Indian corn. They make gardens of it, planting three or four grains in a place, then heaping up a quantity of earth with the shells of that same fish, the signoc,¹⁶ on them, then planting again as much as three feet off, and so on. Among the corn in each hill they plant three or four Brazilian beans,¹⁷ which are of various colors. When they are grown they intertwine among this corn, which grows five or six feet high, and keep the field very free from weeds. We saw there many squashes¹⁸ and

¹⁵The Saco. Champlain reached this point July 9, 1605.

¹⁶The shell of the horseshoe crab used as a shovel.

¹⁷The kidney bean, commonly used as string beans. *Phaseolus vulgaris*. This bean is indigenous in America, and probably came to be called the Brazilian bean because it was supposed to have been introduced into France from Brazil.

¹⁸The familiar summer squash, indigenous in America.

VOYAGES AND EXPLORATIONS

pumpkins and some tobacco, which they also cultivate. The Indian corn that I saw there was two feet high, and some of it was three. They sow it in May and harvest it in September. As for the beans, they were beginning to blossom, as were also the squashes and pumpkins. I saw there a great quantity of nuts, which are small, and have several divisions. There were not any yet on the trees, but we found enough of them underneath that had fallen the year before. There are also a great many vines, which bear a very beautiful berry, from which we made a very good verjuice, something that we had not seen before, except in the Isle of Bacchus, nearly two leagues distant from this river. Their settled habitation, the tillage and the beautiful trees, gave me the impression that the air there is milder and better than that where we passed the winter, and than that of other places on the coast. The forests in the interior are very light, but, nevertheless, consist of oaks, beeches, ashes and young elms. In wet places there are a great many willows. The savages stay in this place all the time, and have a big cabin surrounded by palisades made of rather large trees placed side by side, whither they retire when their enemies come to war against them; and they cover

SAMUEL DE CHAMPLAIN

their cabins with oak bark. This place is very pleasant and as agreeable as any one could see. The river is full of fish and is surrounded with meadows. At its mouth there is an island which would make a good fortress, where one would be safe.

CHAPTER V

The Choüacoet River. Places that the author discovered there. Cape of Islands. Canoes of the people made of birch bark. How the savages of that country revive those who faint away. Use stones instead of knives. Their chief honorably received by us.

ON Sunday, the twelfth of the month,¹ we left the river called Choüacoet. Coasting along the shore, after having made six or seven leagues, we were obliged by a contrary wind to anchor and go ashore, where we saw two meadows, each a league long and half a league wide. From Choüacoet to this place (where we saw some little birds, which have a song like blackbirds, and are black, except the end of the wings, which are orange)² there are a great many grapevines and nut trees. This coast is

¹July 12, 1605, fell on Tuesday. L.

VOYAGES AND EXPLORATIONS

sandy in most places from Quinibequy. This day we turned back two or three leagues toward Choüacoet, as far as a cape that we named Island Harbor,³ good for ships of a hundred tons. It is among three islands.

Heading northeast a quarter north,⁴ near this place, one enters another harbor⁵ where there is no passage (although there are islands), except that by which one enters. At the entrance there are some dangerous rocks, with the sea breaking over them. On these islands there are so many red currants that one sees nothing else in most places, and there are an infinite number of pigeons, of which we caught a good many. The Island Harbor is in latitude $43^{\circ} 25'$.

Sailing along the coast we noticed smoke on the shore of the sea. We approached as near as possible, and saw no savages, which made us think that they had fled from the place. The sun was sinking, and we could not find any place to pass that night, because the coast was flat and sandy. Heading south, in order to keep off shore, so that we might anchor, when we had made about two leagues, we observed a

³Cape Porpoise Harbor. S.

⁴I. e., northeast by north.

⁵Goose Fair Harbor. S.

SAMUEL DE CHAMPLAIN

cape on the mainland, south a quarter southeast⁶ of us, perhaps six leagues away. Two leagues to the east we saw three or four rather high islands,⁷ and to the west a large bay. The shores of this bay, as far as the cape, run inland from where we were about four leagues. It is two leagues wide from north to south, and three at its entrance.⁸ And not discovering any place suitable to put up in, we decided to go to that cape under short sail a part of the night, and approached it as far as where the water was 16 fathoms deep. There we anchored to await the dawn.

The next day we went to this cape, where there are three islands near the mainland full of trees of different kinds, as at Choüacoet, and on the whole coast; and to another flat one, where the sea breaks, which juts out into the sea a little farther than the others, where there is not any wood at all. We named this place Island Cape.⁹ Near it we perceived a canoe with five or six savages in it who were coming to us, who, when they were near our boat, went

⁶I. e., south by east. This was Cape Anne.

⁷The Isles of Shoals.

⁸The broad water at the mouth of the Merri-mac.

⁹Cape Anne.

VOYAGES AND EXPLORATIONS

away to dance on the shore. I landed to see them, and gave each one a knife and some biscuit, which caused them to dance again better than before. When this was over, I made them understand, as best I could, that they should show me how the coast lay. After having depicted for them, with a piece of charcoal, the bay and the Island Cape, where we were, they represented for me, with the same crayon, another bay, which they showed as very large.¹⁰ They put six pebbles at equal distances, thus giving me to understand that each of these stood for as many chiefs and tribes. Then they represented within this bay a river¹¹ which we had passed, which extends very far, and has shoals. We found a great many vines in this place, with green grapes on them a little larger than peas, and many nut trees, on which the nuts were no larger than musket balls. These savages told us that all who lived in this country cultivated and planted the soil, like the others that we had seen before. This place is in latitude 43 degrees and some minutes.

Doubling the cape¹² we entered a cove,

¹⁰Massachusetts Bay.

¹¹The Merrimac.

¹²This paragraph and the two short ones follow-

SAMUEL DE CHAMPLAIN

where there are quantities of vines, Brazilian peas,¹³ pumpkins, squashes, and some roots that are good, which the savages cultivate, and which taste somewhat like chards.¹⁴

This place, which is rather pleasant, is fertile in walnut^{14*} trees, cypresses,¹⁵ oaks, ashes and beeches, which are very beautiful.

We saw there a savage who hurt his foot so badly, and lost so much blood, that he fell in a faint. A number of others surrounded him and sang some time before they touched him. Then, making certain signs with the feet and hands, they moved his head, and, with a sigh, he came to himself. Our surgeon dressed the wound and he was not prevented, on that account, from going off gaily.

When we had sailed half a league¹⁶ we noticed several savages on the point of a rock. They ran dancing along the shore

ing are taken from the description of the voyage of 1606 and are inserted here to make the record of the exploration of this coast a continuous narrative. See *Voyages of Champlain*, II, 111-112. See Laverdière's note, *Voyage de 1632*, I, 86.

VOYAGES AND EXPLORATIONS

toward their companions to warn them of our coming. When they had shown us the direction in which they lived they made a sign with smoke, to show us their dwellings. We anchored near a little island,¹⁷ from which we sent our canoe to carry them knives and cakes. We perceived, from the number of them, that these places were more inhabited than the others that we had seen. After we had spent two hours studying these people, whose canoes are made of birch bark, like those of the Canadians, Souriquois and Etechemins, we weighed anchor, and, with the prospect of good weather, we set sail. Continuing our route west southwest, we saw many islands on both sides. Having made seven or eight leagues, we anchored near an island,¹⁸ where we saw a great deal of smoke all along the shore and many savages running to see us. We sent two or three men in a canoe toward them, to whom we gave some knives and beads to present to them. They were much pleased with these things, and danced several times in acknowledgment. We could not find out the name of their chief, because we did not understand their

¹⁷Thatcher's Island. S.

¹⁸Probably in Boston Harbor, near the western end of Noddle's Island, now East Boston. S.

SAMUEL DE CHAMPLAIN

language. All along the shore there is a great deal of land cleared, and planted with Indian corn. The country is very pleasant and agreeable, with a great many beautiful trees. Those who inhabit it have canoes made all in one piece, very easy to upset if one is not skillful in managing them. We had not seen any of that kind before. This is how they make them: after having taken much trouble and spent a long time in felling the largest and tallest tree that they can find, with stone hatchets (for at that time they had no other kind, unless some of them got some from the savages on the coast of Acadie, who got them in the fur trade), they take off the bark, and round it all but one side, where they set fires every little way all along the log. Sometimes they take red-hot pebbles, which they also put on it, and when the fire is too fierce they extinguish it with a little water; not entirely, but only enough to prevent the edge of the canoe from being burned. When it is as much hollowed out as they wish, they scrape it all over with these stones. The pebbles with which they do the cutting are like our musket flints.

The next day, the 17th of the month, we weighed anchor to go to the cape, which we had seen the day before, and which was

VOYAGES AND EXPLORATIONS

south southwest¹⁹ of us. This day we could make only five leagues, and we passed some islands covered with wood.²⁰ I recognized in the bay everything that the savages of Island Cape had described to me. As we continued our course, a great many people came to us from the islands and the mainland in canoes. We anchored a league from the cape, which I named Saint Louis,²¹ where we saw smoke in several places. When we were trying to go there our boat ran on a rock, where we were in great danger; for, if we had not got it off promptly, it would have overturned into the sea, which was ebbing, where there were about five or six fathoms of water. But God preserved us, and we anchored near this cape, whither came fifteen or sixteen canoes of savages, some of them containing fifteen or sixteen, who began to show signs of great joy, and made a variety of speeches, which we did not understand at all. We sent three or four men ashore in our canoe, to get some water, and to see their chief, named Honabetha. He was given some knives, and other trinkets, which I thought it proper to give them. He came

¹⁹Southeast?

²⁰In Boston Bay.

²¹Brant Point. S.

SAMUEL DE CHAMPLAIN

alongside to see us, with a number of his companions, of whom there were as many on the bank as in their canoes. We received the chief very kindly, and gave him good cheer; and when he had been there some time he returned. The men whom we had sent to them brought us some little squashes the size of one's fist, which we ate as a salad, like cucumbers. They are very good. They brought, also, some purslane, which grows freely amongst the Indian corn, and of which they take no more account than of weeds. We saw, in this place, a great many little houses scattered about the fields where they plant their Indian corn.

There is, besides, in this bay a very large river,²² which I named River du Gas. I think it rises in the direction of the Iroquois, a tribe²³ that has open war with the Montagnais of the great Saint Lawrence River.

²²Probably the Charles River. Apparently added at the end of the chapter to make complete the description of Boston Bay, although it would naturally have been mentioned earlier. The river was named after De Monts, whose family name was Du Guast (also spelled Gua, or Gas).

²³Champlain's maps greatly contract the width of the land between the coast and Lake Champlain.

VOYAGES AND EXPLORATIONS

CHAPTER VI

Continuation of the discoveries along the coast of the Almouchiquois, and what we specially noticed there.

THE next day we rounded Cape St. Louis, so named by us, a rather flat country, in latitude $42\frac{3}{4}^{\circ}$, and this day made two leagues along a sandy shore. In going by we saw there a great many cabins and gardens, and entered a little bay. Two or three canoes came toward us, on their way from catching cod and other fish, which abound there. They catch them with hooks made of a piece of wood, into which they drive a bone shaped like a harpoon, which they fasten very carefully so that it shall not come out, the whole being in the form of a hook. The line which is attached to it is of hemp, I think, like that in France; and they told me that they gathered the plant for it in their land without cultivating it, indicating to us that it was four or five feet high.¹ This canoe went back to the land to warn those of this settlement, who made

¹The swamp milkweed, or Indian hemp. S.

SAMUEL DE CHAMPLAIN

fires in our honor ; and we saw eighteen or twenty savages come to the edge of the water and dance. Our canoe went ashore to give them some trinkets, with which they were very much pleased. Some of them came to us and asked us to come to their river. We weighed anchor to do so, but we could not enter it because of the little water that we found there, as it was low tide. And so we were obliged to anchor at the mouth. I went ashore, where I saw a great many more savages, who received us very graciously. I explored the river, where I observed nothing but an arm of water which extended a little inland. This land is, in part, cleared. In it there is only a brook which cannot carry boats, except at high tide. This place is about a league in circumference. At one side of the entrance to it there is a sort of island covered with wood, principally pines, which is connected at one end with some pretty long sand dunes ; on the other side there is rather high ground. There are two islets in this bay, that one does not see unless one is within it. And in this bay the sea is almost dry at low tide. This place is very noticeable from the sea, inasmuch as the shore is very flat, except the cape at the entrance of the bay. We named it Cape St. Louis

VOYAGES AND EXPLORATIONS

Harbor,² it being distant two leagues from this cape, and ten from the Island Cape. It is in about the same latitude as Cape St. Louis.

We left this place,³ and, coasting along the shore southward, we made four or five leagues and passed near a rock level with the water. Continuing our course we perceived land which we thought was islands; but, getting near it, we discovered that it was the mainland, north northwest of us, and that it was the cape of a large bay⁴ more than 18 or 19 leagues in circumference, where we were so engulfed that we had to turn completely about to round the cape that we had seen. We named it Cape Blanc,⁵ because it was sand and dunes which looked white. A favorable wind served us well in this place, for without it we should have been in danger of being cast on the shore. This bay is very safe, provided one does not go nearer the shore

²This was the harbor of Plymouth. See *Voyages of Champlain*, II, 78, for his plan and the identification of the places on it. This harbor had been visited by Martin Pring in 1603, and Capt. John Smith explored it in 1614 and named it Plymouth.

³On July 19, 1605.

⁴Cape Cod Bay.

⁵Cape Cod.

SAMUEL DE CHAMPLAIN

than a good league, for it has no islands or rocks, except the one of which I have spoken, which is near a river that runs some distance inland.⁶ We named this river Ste. Suzanne du Cap Blanc. From it to Cape St. Louis is ten leagues across. Cape Blanc is a sandy point which bends around to the south six leagues. This coast consists of lofty sand dunes, which are conspicuous as one comes from the sea. Sounding at about 15 or 18 leagues from the land one finds 30, 40 and 50 fathoms of water all the way until one comes to 10 fathoms, near the shore, which is very safe. There is a great stretch of open country on the shore before one enters the woods, which are very agreeable and pleasant to see. We anchored off the shore and noticed several savages, toward whom four of our men went. Walking on a sand dune they saw a sort of bay and some cabins bordering it all around. When they were about a league and a half from us there came dancing toward them (as they told us) a savage who had come down from the high part of the coast and who returned there shortly afterward to warn those of his settlement of our coming.

The next day⁷ we went to the place that

⁶Wellfleet Harbor.

⁷July 20.

VOYAGES AND EXPLORATIONS

our men had discovered, which we found to be a very dangerous port, because of shallows and bars, and where we saw breakers in every direction. It was almost low tide when we entered it, and there were only four feet of water in the northern passage; at high tide there are two fathoms. When we were in it we found this place rather large, perhaps three or four leagues in circumference, all surrounded by little houses, about which each occupant had as much land as was necessary for his support. A rather pretty little river empties into it. At low tide it is about three and a half feet deep. There are also two or three brooks bordered by meadows. This place would be very fine, if only the harbor were good. I took the altitude and found the latitude 42° , and the variation of the needle $18^{\circ} 40'$. A great many savages came to us, both men and women, who ran up from every direction dancing. We named this place Port de Mallebarre.⁸

The next day we went, with our arms, to see their settlement, going a league along the coast. Before arriving at their cabins, we entered a field planted with Indian corn in the way that we have already described. It was in flower and was five and a half feet

⁸Nauset Harbor.

SAMUEL DE CHAMPLAIN

high. There was some less advanced, planted later. We also saw a great many Brazilian beans, and squashes of various sizes, good to eat; some tobacco and some roots that they cultivated, which have the taste of the artichoke. The woods are filled with oaks, walnuts⁹ and very beautiful cypresses,¹⁰ which are reddish and have a very good odor. There were also several fields that were not cultivated at all, because they were letting the soil lie fallow; when they wish to plant it they burn the grass and then till it with their wooden spades. Their cabins are round, covered with great mats made of reeds, and on the top, in the middle, there is about a foot and a half open, where the smoke of the fires that they make escapes. We asked them if that was their settled home, and if it snowed there much; which we could not very well ascertain, as we did not know their language, although they tried as hard as they could to tell us by signs, taking some sand in their hands, then spreading it on the ground and showing that it was the color of our neckbands and that it came upon the earth to the depth of a foot. Others of them showed us that it was less; giving us also to un-

⁹Here probably hickories.

¹⁰Red cedars.

VOYAGES AND EXPLORATIONS

derstand that the harbor never freezes. But we could not find out whether the snow lasted long or not. Nevertheless, I think that the region is temperate, and that the winter is not severe.¹¹

None of the savages this side of the Island Cape wear either gowns or furs, except very rarely, and what gowns they do wear are made of grass and of hemp, and scarcely cover their bodies, reaching only to the thighs. They have only the private parts concealed with a small piece of skin. And the women, too, except that with them it comes down a little lower in the back than with the men. All the rest of the body is naked. When the women came to see us they wore gowns open in the front. The men cut off their hair on the top of the head, like those at the Choüacoet River. I saw, among other things, a girl with her hair dressed quite neatly, with a skin dyed red, embroidered on the upper part with little beads of shell. A part of her hair

¹¹At this point Champlain omits the account given in his earlier narrative of the fray with the Indians, which resulted in the death of a sailor. This was the first recorded clash between the French and the Massachusetts Indians. See *Voyages of Champlain*, II, 83-84. Laverdière, *Voyages*, 1613; pp. 67-68.

SAMUEL DE CHAMPLAIN

hung down her back, and the rest was braided in different ways. These people paint their faces red, black and yellow. They have almost no beard, and pull it out as fast as it grows, and their bodies are well proportioned. I do not know what government they have, and I think that in that they resemble their neighbors, who have not any, and do not know how to worship or to pray. For arms they have only pikes, clubs, bows and arrows. They appear, to look at them, good-natured and better than those in the north; but, to tell the truth, they are bad, and even the little we saw of them enabled us easily to discern their character. They are great thieves, and if they cannot secure a thing with their hands they try to do so with their feet, as we have often experienced. One should be on one's guard with these people and constantly distrust them, without ever letting them be aware of it. They bartered their bows, arrows and quivers with us for pins and buttons; and if they had had anything better they would have done the same thing. They gave us a great deal of tobacco, which they dry, then powder. When they eat Indian corn they boil it in earthen pots, which they make differently from our method. They also bray it in wooden mortars and reduce

VOYAGES AND EXPLORATIONS

it to flour, then make cakes and biscuits of it, like the Indians of Peru.¹²

There is some cleared land, and they are clearing some every day. This is how they do it: they cut the trees three feet from the ground, then burn the branches on the trunk, and plant their corn between these cut trees, and in the course of time take up the roots. There are also some beautiful meadows which would feed a goodly number of cattle. This harbor is very beautiful and good. There is enough water in it for ships, and one can be sheltered there behind the islands. It is in latitude 43°, and we named it Beauport.¹³

The last day of September¹⁴ we departed from Beauport, passed by Cape St.

¹²Nauset Harbor, on the southeast bend of Cape Cod, was the end of the exploration of 1605. The earlier narrative records a few more observations about the Indians, etc., and then tells of the return and the removal of the settlement from St. Croix to Port Royal and its history down to Sept. 5, 1606, when Poutrincourt set out to make further exploration of the coast to the south. Champlain roughly fitted the narrative of the voyage of 1606 on to that of the 1605 voyage with some overlapping. It begins in the following paragraph with some further observations about Cape Anne.

¹³Gloucester Harbor.

¹⁴Sept. 30, 1606.

SAMUEL DE CHAMPLAIN

Louis,¹⁵ and sailed all night toward Cape Blanc.¹⁶ In the morning, one hour before dawn, we found ourselves to the leeward of Cape Blanc, in Baye Blanche,¹⁷ in eight feet of water, a league from the land. We anchored there, in order not to go any nearer before daylight and to see how the tide was. Meanwhile, we sent our shallop to make soundings. Not more than eight feet of water was found, so that it was necessary to decide, while we waited for daylight, what we should do. The water lowered to five feet, and sometimes our bark went aground on the sand, always without any shock or any damage, for the sea was fine and we had not less than three feet of water under us. Then the sea began to rise, which gave us great hope.

When it was day we observed a very low, sandy shore, off which we were, only more to the leeward. Thither we sent the shallop to make soundings in the direction of some rather high land, where we thought that there was a great deal of water, and, in fact, we found there seven fathoms. We anchored there, and at the same time prepared the shallop, with nine or ten men, to

¹⁵Brant Point.

¹⁶Cape Cod.

¹⁷Cape Cod Bay.

VOYAGES AND EXPLORATIONS

go ashore to look at a place where we thought there was an excellent harbor, to which we could go if the wind should rise higher than it then was. Having explored we entered it in 2, 3 and 4 fathoms of water. When we were within we found 5 or 6 fathoms. There were a great many oysters there, which were very good. We had not seen them before, and we called the place Oyster Harbor.¹⁸ It is in latitude 42°. Three canoes of savages came to us. This day the wind was favorable for us, and so we weighed anchor to go to Cape Blanc, distant from this place five leagues north a quarter northeast, and we doubled it.

The next day, October 2, we arrived off Mallebarre,¹⁹ where we sojourned some time, on account of an adverse wind. During this time we went with the shallop, with a dozen or fifteen men, to visit the harbor. There a hundred and fifty savages came to meet us, singing and dancing, according to their custom. When we had seen this place we returned to our ship and, as the wind was favorable, we sailed along the coast toward the south.

¹⁸Probably Barnstable Harbor. S.

¹⁹Nauset.

SAMUEL DE CHAMPLAIN

CHAPTER VII

Continuation of these explorations as far as Port Fortuné, some twenty leagues from there.

WHEN we were about six leagues from Mallebarre we anchored near the shore, as the wind was unfavorable. Along the shore we perceived some smoke made by the savages, which decided us to go to see them, and, with this object, the shallop was equipped. But when we were near the beach, which is sandy, we could not reach it for the swell was too great. When the savages saw this they launched a canoe and eight or nine of them came toward us singing and making signs of the joy that they felt at seeing us. Then they showed us that lower down there was a harbor, where we could put our bark in a safe place. As the shallop could not get to the shore it came back to the bark, and the savages returned to the shore after we had treated them kindly.

The next day, the wind being favorable, we continued our course five leagues to the north,¹ and had no sooner gone thus far

¹A mistake for the south.

VOYAGES AND EXPLORATIONS

than we found three or four fathoms of water a league and a half from the shore. When we had gone a little farther the bottom rose to a fathom and a half, and two fathoms, which gave us some apprehension, as we saw the sea breaking on all sides, and did not see any passage by which we could return on our course, for the wind was directly contrary.

Being thus entangled among the breakers and sand-bars it was necessary to take our chances on a passage where we could judge that there was the most water for our bark, which drew at least four feet, and we went among the breakers to where it was four and a half feet deep. At last we succeeded, by the grace of God, in getting by a sandy point which juts almost three leagues into the sea, south southeast, a very dangerous place. Doubling this cape, which we named Cap Batturier,² a dozen or thirteen leagues from Mallebarre, we anchored in two and a half fathoms of water, for we perceived that we were surrounded on all sides by breakers and shoals, except in some places where the sea was not so rough. We sent the shallop to find a channel, so that we might go to a place which we judged

²Monomoy Point. The distances are overestimated, S. Cap Batturier means Cape of Shoals.

SAMUEL DE CHAMPLAIN

to be the one that the savages had told us about; and we thought, too, that there was a river there, where we could be safe.

When our shallop arrived there, our men went ashore and looked over the place. Then they came back, bringing a savage with them, and told us that we could enter there at high tide, which we decided to do. Immediately we weighed anchor and, under the guidance of the savage, who piloted us, we anchored at a roadstead³ in front of the harbor, where there were six fathoms of water and a good bottom. We could not enter the harbor, for night had overtaken us.

The next day some one was sent to place beacons on the end of a sand bank at the mouth of the harbor; then, as it was high tide, we entered in two fathoms of water. When we got there we praised God that we were in a place of safety.⁴ Our rudder, which had broken, had been repaired with ropes, and we feared lest, among these shallows and strong tides, it would break again, which would have caused us to be lost.

Within this harbor there is only one fathom of water, and at high tide two. On

³Chatham Roads, or Old Stage Harbor. S.

⁴Stage Harbor, Chatham. S.

VOYAGES AND EXPLORATIONS

the east there is a bay which runs northward about three leagues. In it there are an island and two other little coves, which make the landscape beautiful. There is a good deal of cleared land, and there are many little hills, where they raise corn and other grains upon which they live. There are also very beautiful vines there, a great many walnuts, oaks, cypresses⁵ and a few pines. All the people here are very fond of tilling the soil, and store Indian corn for the winter, which they preserve in the following way: they make trenches on the hillsides in the sand, five or six feet, more or less, deep; put their corn and other grains in big sacks made of grass, and throw them into these trenches and cover them with sand three or four feet above the surface of the earth. They take from their store at need, and it is as well preserved as it could be done in our granaries.⁶

⁵Cedars.

⁶The Pilgrim Fathers found such stores. Bradford writes: "And heaps of sand newly padled with their hands, which they digging up, found in them diverce faire Indian baskets filled with corne, and some in eares, faire and good, of diverce colours." *History of Plymouth Plantation*, ed. 1898, p. 99. See also the other quotations in *Voyages of Champlain*, II, 121.

SAMUEL DE CHAMPLAIN

In this place we saw some five or six hundred savages who were all naked, except their private parts, which they cover with a little piece of doe-skin or seal-skin. The women also cover theirs with skins, or white leaves, and all have the hair well combed, and braided in various ways, like the Choüacoet⁷ women, and are well proportioned in their bodies, which are olive-colored. They deck themselves with feathers, shell beads and other gew-gaws, which they arrange very neatly in a sort of embroidery. Their arms are bows, arrows and clubs; and they are not so much great hunters as good fishermen and husbandmen.

As to what their regulations, government and belief may be, I have only been able to conjecture, and I think that they are not different, in these respects, from our Souriquois and Canadian savages who worship neither the sun, nor the moon, nor anything else, and pray no more than the beasts. Still, they have among them some persons who, they say, have an understanding with the devil, in whom they have great faith, who tell them everything that is to befall them, although lying most of the time. They hold them as prophets, although they deceive

⁷I. e., the Maine Indians.

VOYAGES AND EXPLORATIONS

them, as the Egyptians and Bohemians⁸ do the simple villagers. They have chiefs whom they obey in questions of war, but not otherwise. They work and do not have any higher rank than their companions.

Their habitations are separated from one another according to the land that each can occupy, and are large, made circular, covered with matting, or the leaf of the Indian corn. They are furnished only with a bed or two, raised a foot from the ground, made of a number of pieces of wood piled one upon another, on top of which they put a reed mat, in the Spanish fashion (a sort of matting two or three fingers thick), on which they sleep.⁹ They have a great many fleas in summer, even in the fields. When we went walking we were so covered with them that we had to change our clothes.

All the harbors, bays and shores from Choüacoet are filled with every kind of fish, like those on the coasts of Acadie, and

⁸The Gypsies. Egyptians, in the popular form, "Gypsies" came to be the common English name for these wandering fortune-tellers, while in French it came to be "Bohemians"; hence the origin of "Bohemian" in the sense of unconventional.

⁹Cf. the quotations, from Gookin and Mourt's Relation, in *Voyages of Champlain*, II, 125.

SAMUEL DE CHAMPLAIN

in such abundance that I can assure you that there was not a day or a night when we did not see and hear pass by our boat more than a thousand porpoises, which were chasing the small fish. There is also a quantity of various kinds of shellfish, and especially oysters. Game birds are very abundant there.

It would be a very suitable place for building and laying the foundations of a commonwealth, if the harbor were a little deeper and the entrance to it safer than it is. It was named Port Fortuné,¹⁰ on account of an accident that happened there. It is in latitude $41\frac{1}{3}$ degrees and is 13 leagues from Mallebarre. We saw all the surrounding country, which is very beautiful, as I have said above, and we saw a great many little houses here and there.

Having left Port Fortuné, and gone six or seven leagues, we sighted an island, which we named La Soupçonneuse,¹¹ because from a distance we had several times

¹⁰Chatham. Five men who stayed on shore overnight, contrary to Poutrincourt's orders, were surprised by the Indians and several of them killed. See *Voyages of Champlain*, II, 126-130. Laverdière, *Voyages*, 1613, 105-107.

¹¹The Doubtful, Martha's Vineyard. S.

VOYAGES AND EXPLORATIONS

thought that it was something besides an island. Coasting along to the southwest nearly twelve leagues we passed near a river which is very small and difficult to approach, because of shallows and rocks at its mouth. I gave it my name.¹² All that we saw of this coast consists of low and sandy lands, which are not lacking in beauty and fertility, although hard to reach. There are no shelters, very many reefs, and there is little water for nearly two leagues from the land. The most that we found was seven or eight fathoms in some channels, though it did not extend more than the length of a cable; then one suddenly returned to two or three fathoms. No one should trust himself to it without having become very familiar with it by taking soundings.

These are all the coasts that we explored, whether in Acadie or among the Etechemins and Almouchiquois.¹³ I made a very exact map of what I saw of them, which I had

¹²This was the tidal passage commonly called Wood's Hole. It is to be regretted that those who wished to get rid of this homely name should have tried to transform Hole into a supposed Norse "Holl," an imaginary relic of the Norsemen, instead of trying to revive this earliest authentic name, Champlain River.

¹³I. e., whether in Nova Scotia or New England.

SAMUEL DE CHAMPLAIN

engraved in the year 1604,¹⁴ and it has since been published with the accounts of my first voyages.¹⁵

CHAPTER VIII

Discovery from Cape la Héve to Canseau, very much in detail.

GOING from Cape de la Héve¹ to Sesambre,² which is an island so called by some people from St. Malo, 15 leagues from La Héve, one finds a great many islands, which we named Les Martyres, because formerly some Frenchmen were killed there by the savages. These islands are in sev-

¹⁴Evidently copyist's error. No doubt the map of 1612 is meant, which is reproduced in *Voyages of Champlain*, III, 228. Slafter calls it the map of 1613, but the date on the map is 1612.

¹⁵Champlain omits here the account of the return voyage, of the winter of 1606-07 at Port Royal, of which Lescarbot has given such an entertaining account, and of the following spring and summer until about the middle of August, 1607. See *Voyages of Champlain*, II, 132-150. Laverdière, *Voyages*, 1613, 108-126.

¹Champlain left Port Royal August 11, 1607, but he does not begin his description in this narrative until he strikes new ground, going east on the coast of Nova Scotia.

²Now Sambro. S.

VOYAGES AND EXPLORATIONS

eral inlets and bays. In one of them there is a river called Ste. Marguerite,³ seven leagues from Sesambre, in latitude $44^{\circ} 25'$. The coasts and islands are covered with a great many pines, firs, birches and other poor kinds of trees. Fishing is abundant and also bird-hunting.

From Sesambre we passed a very safe bay of about seven or eight leagues in extent, with no islands in it, except at the bottom, where there is the mouth of a little river with not much water in it.⁴ Then, heading northeast by east, we came to a harbor eight leagues from Sesambre, which is quite good for ships of 100 to 120 tons. At its mouth there is an island, from which, at low tide, one can go to the mainland. We named this place Port Ste. Heleine.⁵ It is in latitude $44^{\circ} 40'$, a little more or less.

From this place we went to a bay called The Bay of All Islands, which has an area of perhaps 14 or 15 leagues,⁶ dangerous places on account of the sand-bars, shallows and reefs that are there. The country looks very poor, being filled with the same kinds of wood that I have mentioned above.

³The name still survives.

⁴Halifax Harbor.

⁵Perpisawick Inlet. S.

⁶Nicomtau Bay and the islands in and near it.

SAMUEL DE CHAMPLAIN

From there we went along to near a river six leagues distant, which is called Green Island River, because it has one at its mouth.⁷ This short stretch that we went was filled with a great many rocks jutting almost a league into the sea, where the water breaks a great deal. It is in latitude $45\frac{1}{4}^{\circ}$.

From there we went to a place where there is a bay and two or three islands, and a rather fine harbor,⁸ three leagues from Green Island. We also passed several islands that are in a row, and named them *Les Isles Rangées*. They are six or seven leagues from Green Island. After this we passed by another bay,⁹ where there are several islands, and went as far as a place where we found a ship which was fishing among some islands that are somewhat distant from the shore, four leagues from *Les Isles Rangées*. We called this place *Savalette Harbor*,¹⁰ from the captain of the boat that was fishing. He was a Basque.

Leaving this place we arrived at *Canseau*¹¹

⁷The River St. Mary and Wedge Island. L.

⁸Country Harbor.

⁹Tor Bay.

¹⁰White Haven.

¹¹Spelled *Canseau* by Champlain in 1632 and *Campseau* in 1613. The modern English form is *Canso*.

VOYAGES AND EXPLORATIONS

on the 27th of the month.¹² It is distant from Savalette Harbor six leagues, in which space we passed a great many islands before we reached Canseau. The raspberries on them were plentiful beyond description.

All the shores that we coasted along, from Cape Sable to this place, consist of moderately high land and cliffs; for the most part places bordered by a number of islands and reefs which jut out into the sea sometimes nearly two leagues. They are very bad for ships to approach; nevertheless, there is no lack of good harbors and roadsteads along these coasts and islands. As for the land, it is worse and more disagreeable than in other places that we had seen, except about some rivers and brooks where the country is rather pleasant. In these places the winter must be cold, and it lasts almost six months.

This port of Canseau is among islands, and it is very hard of approach, if the weather is not good, on account of the rocks and reefs all about.

From this place to the Island of Cape Breton, which is in latitude $45\frac{3}{4}^{\circ}$, and $14^{\circ} 50'$

¹²August. Champlain omits here the meeting with Champdoré and Lescarbot at Canseau. *Voyages of Champlain*, II, 154.

SAMUEL DE CHAMPLAIN

of the variation of the needle, it is eight leagues; and to Cape Breton 25 leagues. Between the two there is a large bay entering about nine or ten leagues into the land. It makes a passage between the Island of Cape Breton and the mainland, which extends to the great Bay of Saint Lawrence, by which one goes to Gaspé and Isle Percée, where there is fishing. This passage by the Island of Cape Breton is very narrow. Large ships do not go through it at all, although there is enough water there, because of the great currents and the violence of the tides. We named this place Running Passage.¹³ It is in latitude $45\frac{3}{4}^{\circ}$.

This Cape Breton Island is triangular in form, 80 leagues in circumference, and is, for the most part, mountainous land, yet in some places pleasant. In the middle of it there is a sort of lake,¹⁴ where the sea enters from the north a quarter northeast and from the south a quarter southeast,¹⁵

¹³Le Passage Courante: the Gut or Strait of Canso.

¹⁴Great Bras d'or Lake.

¹⁵That is, the northern entrance lies north by east and the southern south by east. There is no natural entrance at the south, but one has been made by digging a canal through the narrow Isthmus of St. Peter's.

VOYAGES AND EXPLORATIONS

and there are many islands filled with a great deal of game, and shellfish of several kinds; among others, oysters which have not much flavor. In this place there are several harbors and places for fishing, namely, English Harbor,¹⁶ two or three leagues from Cape Breton; and the other, Niganis, 18 or 20 leagues farther north. The Portuguese formerly wished to inhabit this island, and passed a winter there, but the severity of the weather and the cold made them abandon their settlement.^{16*} When I had seen all these things I returned to France, having spent four years equally divided between the settlement at St. Croix and Port Royal.¹⁷

¹⁶Later named Louisbourg.

^{16*}Possibly at the time of the exploration of Fagundes, 1521. See Harris, *Discovery of North America*, 182, ff.

¹⁷More exactly three years and four months from May, 1604, to September, 1607.

SAMUEL DE CHAMPLAIN

BOOK III

CHAPTER I

Voyages of Sieur de Poutrincourt in New France, where he left his son, Sieur de Biencourt. The Jesuit fathers who were sent there, and their progress in making the Christian faith flourish.¹

THE late Sieur de Poutrincourt, the elder, having obtained a grant from Sieur de Monts, in virtue of his commission, of some lands adjacent to Port Royal, which he had abandoned, the settlement remaining in his right, this Sieur de Poutrincourt made every endeavor to settle it and left there his son, Sieur de Biencourt, whom, while he was considering how to establish himself there, the people of Rochelle and the Basques assisted in most of his expeditions, in the hope of getting furs by this means. But his plan did not succeed as he wished, for the very charitable Madame de Guercheville interfered in this matter, in kindness and consideration toward the Jesuit fathers. This is the account of it.

This Sieur Jean de Poutrincourt, before

¹In his account of these events Champlain followed very closely Father Biard's *Relation de la Nouvelle France*, etc., Lyons, 1616, for which see Thwaites's *Jesuit Relations*, vols. iii and iv.

VOYAGES AND EXPLORATIONS

Sieur de Monts left New France, asked him for Port Royal as a grant. This he bestowed upon him, on condition that within the following two years this Sieur de Poutrincourt should go there himself with several other families, to cultivate and settle the country; which he promised to do in the year 1607. The late King Henry the Great ratified and confirmed this grant and told the late Reverend Father Coton that he wished to make use of their company for the conversion of savages, promising two thousand livres for their maintenance. Father Coton obeyed the commandment of His Majesty; and among others of their fathers Father Biard presented himself to be employed in so holy a voyage; and in the year 1608 he was sent to Bordeaux, where he remained a long time without hearing anything further of the expedition to Canada.

In the year 1609 Sieur de Poutrincourt arrived at Paris. The King having been informed of it, and knowing that contrary to His Majesty's expectations, he had not stirred from France, was very much vexed with him. In order to please His Majesty, he equipped himself for the voyage. Upon this resolution Father Coton offered to give him some monks. Then Sieur de Poutrin-

SAMUEL DE CHAMPLAIN

court told him that it would be better to wait until the next year, promising that as soon as he should arrive at Port Royal he would send back his son, with whom the Jesuit fathers could come.

In fact, in the year 1610, this Sieur de Poutrincourt set out at the end of February and reached Port Royal in the month of June following, where, having assembled as many savages as he could, he had about twenty-five of them baptized on Saint John the Baptist's Day [June 24] by a priest called Messire Josué Fleche, surnamed The Patriarch.

A little while afterward he sent Sieur de Biencourt, his son, aged 19, back to France to carry the good news of the baptism of the savages, and to arrange that he should soon be assisted with provisions, with which he was ill-supplied, to pass the winter there.²

The Reverend Father Christofle Balthazar, Provincial, commissioned the fathers Pierre Biard and Remond Masse to go with Sieur de Biencourt. The King—Louis the Just—caused to be delivered to them five hundred crowns promised by the King, his father, and several rich ornaments given by

²To see how closely Champlain followed Biard's *Relation*, cf. *Jesuit Relations*, III, 615.

VOYAGES AND EXPLORATIONS

Madame de Guercheville and Madame de Sourdis. When they arrived at Dieppe there was some discussion among the Jesuit fathers and the merchants, which caused the fathers to retire to their College of Eu.

When Madame de Guercheville knew this, she was very indignant that the tradesmen had been so presumptuous as to have offended and thwarted these fathers, and said that they ought to be punished; but their only chastisement lay in their not being admitted to the expedition. And, knowing that the equipment would not go above four thousand livres, she took up a collection in the court, and by this kind action she got that sum, with which she paid the merchants who had troubled these fathers, and cut them off from all association with them; and, with the rest of this sum and other large property, she established a fund for the maintenance of these fathers, not wishing them to be a charge to *Sieur de Poutrincourt*. She also arranged that the profits that came from furs and fish, which the ship should bring back, should not revert to the benefit of the associates and other merchants, but should go back to Canada, in the possession of *Sieur Robin* and *Sieur de Biencourt*, who should use it

SAMUEL DE CHAMPLAIN

for the support of Port Royal and the French who were living there.

In reference to this it was decided and ordained that since this money of Madame de Guercheville had been designed for the benefit of Canada, the Jesuits should take part in the profits of the association of Sieur Robin and Sieur de Biencourt, and share them with them.

It was this contract of partnership that spread about so many rumors, complaints and outcries against the Jesuit fathers, who, in that and everything else, are justly governed according to God and to reason, to the shame and confusion of those who envy and malign them.

On January 26, 1611, the same fathers embarked with this Sieur de Biencourt, whom they helped with money to get the ship off, and to alleviate the great want that they experienced in this voyage; since, in coasting along the shores, they stopped and sojourned in several places before arriving at Port Royal, which was on June 12, 1611,³ Whitsunday; and during this voyage these fathers had a great scarcity of provisions, and of other things, according to the accounts of the pilot, David de Bruges, and the captain, Jean Daune—both

³The correct date is May 22. L.

VOYAGES AND EXPLORATIONS

of them of the so-called reformed religion—who confessed that they found these good fathers quite different from what they had been described.

Sieur de Poutrincourt, desiring to return to France, to order his affairs better, left his son, Sieur de Biencourt, and the Jesuit fathers behind him. Altogether, they numbered about twenty persons. He left there in the middle of July of the same year, 1611, and arrived in France at the end of the month of August.

During the winter this Sieur de Biencourt caused annoyances to the people of the son of Pontgravé, whose name was Robert Gravé, whom he treated pretty badly; but, at last, through the efforts of the Jesuit fathers, everything was pacified, and they remained good friends.

As Sieur de Poutrincourt was seeking in France every means of aiding his son, Madame de Guercheville, who was pious, virtuous and very much devoted to the conversion of the savages, having already collected some funds, communicated with him in regard to the matter, and said that she would very gladly join the company, and that she would send some Jesuit fathers with him for the aid of Canada.

The contract of partnership was approved,

SAMUEL DE CHAMPLAIN

this lady being empowered by her husband, Monsieur de Liencour, first Equerry of the King and Governor of Paris. By the contract it was fixed that she should, at this time, give a thousand crowns for the cargo of a ship, provided that she should share the profit that this voyage should yield, and of the lands that the King had given to Sieur de Poutrincourt, as set down in the original of the contract. This Sieur de Poutrincourt reserved for himself Port Royal, and its lands; not intending that they should be included in the common stock of the other lordships, capes, harbors and provinces that he said he had in this country near Port Royal. This lady requested him to produce titles to show that these lordships and lands belonged to him and how he possessed so large a domain. But he excused himself by saying that his titles and papers were in New France.

When this lady heard this, as she was suspicious of Sieur de Poutrincourt, and wished to guard herself against being taken by surprise, she made a contract with Sieur de Monts that he should cede back to her all the rights, deeds and claims that he had, or ever had had, in New France, derived from the gift made him by the late Henry the Great. Madame de Guercheville ob-

VOYAGES AND EXPLORATIONS

tained letters from His Majesty, now reigning, in which the gift was made anew to her of all the lands of New France from the great river as far as Florida, excepting only Port Royal, which was what Sieur de Poutrincourt possessed then, and nothing else.

This lady gave money to the Jesuit fathers to put into the hands of some merchant at Dieppe, but this Sieur de Poutrincourt inveigled these same fathers into giving him four hundred of this thousand crowns.

He sent, in charge of this expedition, an employee of his called Simon Imbert Sandrier, who acquitted himself rather badly in the management of this equipped and freighted ship. He left Dieppe December 31, in the height of winter, and reached Port Royal January 23, the next year, 1612.

Sieur de Biencourt was very glad, on the one hand, to see fresh aid coming; and, on the other hand, he was annoyed that Madame de Guercheville was out of the company,⁴ according to what this Imbert told

⁴Madame de Guercheville through acquiring De Monts's titles and through the king's grant had become the proprietary of all the northeastern coast with the exception of Port Royal, an accession of power which superseded the partnership with Poutrincourt.

SAMUEL DE CHAMPLAIN

him. He was also disturbed by complaints that the Jesuit fathers made to him of the bad management of this expedition by this Imbert, who wrongfully and without cause accused the fathers. Nevertheless, they obliged him to confess that he was fooling when he spoke to this Sieur de Biencourt.⁵

At last, all these matters having quieted down and been pardoned, Father Masse, who was with the savages to learn their language, became ill in a place where he was in great want, for everything was in disorder in this settlement. Father Biard lived at Port Royal, where he suffered great fatigue and great want during several days, being compelled to collect some acorns and roots for his sustenance.

Meanwhile, they were fitting out a vessel in France to withdraw the Jesuits from Port Royal, and found a new settlement in another place. The captain of this vessel was La Saussaye, who had with him thirty persons who were to winter there, including two Jesuits and their servants, who were to land at Port Royal. He already had with him two other Jesuit fathers, namely: Father Quentin and Father Gilbert

⁵Cf. Biard in *Jesuit Relations*, III, 239-243.

VOYAGES AND EXPLORATIONS

du Thet, but they were to go back to France with the crew, which numbered 38. The Queen had contributed to the expense for arms, powder and ammunition. The ship was 100 tons burden. It left Honfleur March 12, in the year 1613, and reached La Héve, in Acadie, May 16, where they set up the arms of Madame de Guercheville as a sign of possession. They came to Port Royal, where they found only five persons—two Jesuit fathers, Hébert, an apothecary (who took the place of Sieur de Biencourt while he went to a long distance to look for provisions), and two other persons. It was to him that they presented the letters from the Queen to release the fathers and permit them to go wherever it seemed good to them; which was done, and these fathers withdrew their goods from the country and left some provisions to this Hébert, so that he should not be in need.

They went from this place, and settled the desert mountains at the mouth of the Pemetegoet⁶ River. The pilot reached the coast on the east of the Island of Mount Desert,⁷ where the fathers stayed, and they gave thanks to God, erecting a cross, and had the holy sacrifice of the Mass; and this

⁶Penobscot.

⁷L'isle des Monts Deserts.

SAMUEL DE CHAMPLAIN

place was named St. Sauveur.³ It is in latitude $44\frac{1}{3}$ degrees.

They had scarcely begun to settle themselves there, and to clear the land, when the English appeared and gave them something quite different to be concerned about.

Ever since the English had established themselves in Virginia, in order to provide themselves with codfish they had been accustomed to come to fish sixteen leagues from the Island of Mount Desert; and, arriving there for this purpose in the year 1613, they were caught by the fogs and cast up on the shores of the savages of Pemete-goet, who, supposing them to be French, told them that there were others of them at St. Sauveur. The English being in need of provisions, and all the men in poor condition, ragged and half-naked, found out all they could about the strength of these Frenchmen; and having got a response in accordance with their desire, they went straight to them and made ready to fight them. The Frenchmen, seeing a single ship at full sail approaching, without knowing that ten others were near by, recognized that it was English. Immediately Sieur de

³Frenchman's Bay. Parkman, *Pioneers of France*, 302. Cf. Biard's *Relation, Jesuit Relations*, III, 265.

VOYAGES AND EXPLORATIONS

la Motte le Vilin, Lieutenant Saussaye and some others rushed on board their ship to defend it. La Saussaye remained on shore with most of his men; but, in the end, the English, being stronger than the French, after some fighting took our men. The English numbered 60 soldiers and had 14 pieces of cannon. In this fight Gilbert du Thet was killed by a musket shot; some others were wounded and the rest were captured, except Lamets and four others who ran away. Afterward they went aboard the French ship, took possession of it, pillaged what they found there and took away the commission of the King which La Saussaye had in his chest. The captain who commanded this ship was named Samuel Argall.

The enemy went ashore and hunted for La Saussaye, who had fled to the woods. The next day he came to find the Englishman, who received him kindly. Being asked for his commission he went to his chest to get it, believing that it had not been opened. He found there all his clothes and conveniences, except the commission, which greatly astonished him. And then the Englishman, feigning indignation, said to him: "What? You gave us to understand that you had a commission from the King, your master,

SAMUEL DE CHAMPLAIN

and cannot produce it? Then you are outlaws and pirates who deserve death." Thereupon the English divided the plunder among themselves.

The Jesuit fathers, seeing the danger to which the French were exposed, labored with Argall until they succeeded in pacifying the English, and Father Biard, by strong arguments, proved to him that all their men were people of substance, and recommended by His Most Christian Majesty. The Englishman made believe that he agreed with him, and accepted the arguments of the fathers, and they said to *Sieur de la Saussaye*: "It is altogether your fault to let your letters get lost in that way." And afterward they had these same fathers to dine at their table.

There was talk of sending the Frenchmen back to France, but they did not wish to give them anything but a shallop for the thirty of them, to go in search of a passage along the coast. The fathers explained to them that it was impossible for a shallop to suffice to carry them without danger. And then Argall said: "I have found another device to take them to Virginia." The workmen were promised that they should not be forced in point of religion, and that after one year of service they

VOYAGES AND EXPLORATIONS

should be sent back to France, and three of them accepted this offer. Sieur de la Motte, also, had consented, from the beginning, to go to Virginia with this English captain, who honored him because he had found him doing his duty; and he allowed him to take some of his men with him and Father Biard; that they should be four, namely, two fathers and two others, and that they should be taken to the islands where the English fish for cod, and that he should give orders to them that by their means he⁹ could pass over to France. This the English captain granted him very willingly.

In this way it was possible for the shallop to carry the men divided into three companies. Fifteen were with the pilot who had got away, fifteen with the Englishman, and fifteen in the shallop that had been given, in which Father Masse was; and it was delivered into the hands of La Saus-saye, and this same Father Masse, with some provisions; but there were no sailors. By good fortune the pilot met it, which was a great benefit to them, and they went as far as Sesambre, beyond La Hève, where Robert Gravé's ship and another ship were.

⁹It should be "they." Cf. the passage in Biard's *Relation, Jesuit Relations*, iv, 22, 23.

SAMUEL DE CHAMPLAIN

They divided the Frenchmen into two companies, to take them over to France, and arrived at St. Malo without having run any risk from storms.

Captain Argall took the fifteen Frenchmen and the Jesuit fathers to Virginia. When they got there the head man of the place, called the Marshal, the military commander of the country, threatened to put the fathers and all the Frenchmen to death, but Argall opposed him with all his power, saying that he had given them his word. And, seeing that he was too weak to sustain and defend them, he resolved to show the commissions that he had taken; and when the Marshal saw them he was appeased, and promised that the word that had been given them should be kept to them.

This Marshal assembled his council and resolved to go to the coast of Acadie, and there to raze all the habitations and fortresses as far as latitude 46°, with the pretence that all that country belonged to him.¹⁰

¹⁰Biard adds that Argall was instructed to hang La Saussaye and his men. *Jesuit Relations*, iv, 34, 35. This order of Dale's may be compared with the destruction of the French in Florida by Menendez, except that Menendez acted under instruc-

VOYAGES AND EXPLORATIONS

Upon this resolution of the Marshal, Argall resumed his course with three vessels, divided the Frenchmen among them and returned to St. Sauveur. He thought he should find La Saussaye there, and a ship recently arrived, but he learned that he had returned to France. They set up a cross there, in place of that which the fathers had placed there, which they broke down, and on theirs they inscribed the name of the King of Great Britain, for whom they took possession of this place.

Then they went to St. Croix, which he burned. He also took away all the landmarks that were there, and carried off a supply of salt that they found in it.¹¹

Afterward he went to Port Royal, guided by a savage whom he took by force, the Frenchmen being unwilling to direct him. He went ashore, made an entrance, saw the dwelling and, not finding any one in it, took what there was of plunder, had it burned, and in two hours the whole was in ashes. And he took all the landmarks that the French had put there,

tions from the King, while it is hard to see any basis, whatever, of authority for Dale's action. Cf. Parkman's strong expressions, *Pioneers of New France*, 312-13.

¹¹Cf. Biard, *Jesuit Relations*, iv, 37.

SAMUEL DE CHAMPLAIN

so that those who were there were forced to abandon this abode and go with the savages.

A wicked and unnatural Frenchman, who was with those who escaped into the woods, approaching the edge of the water, shouted loudly and demanded that they should parley. This was granted him, and then he said: "I was surprised that, since there is with you a Spanish Jesuit, named Father Biard, you do not put him to death for a bad man who will do you harm if he can, if you let him." Is it possible that the French nation produces such monsters of men, so detestable as sowers of calumnious falsehoods, in order to make these good fathers lose their lives?

The English left Port Royal November 9, 1613. In this voyage the winds and storms were such that the three ships got separated from one another. The bark in which there were six Englishmen could not be recovered afterward, but Captain Argall's ship reached Virginia. He informed him¹² who Father Biard was and he¹³ took him to be a Spaniard, and was waiting for

¹²I. e., Argall told Dale, the Governor of Virginia. See Biard's *Relation*, *Jesuit Relations*, iv, 52, 53.

¹³I. e., Governor Dale.

VOYAGES AND EXPLORATIONS

him to put him to death.¹⁴ He¹⁵ was then in the third vessel, which was under the command of a captain named Turnel, a mortal enemy of the Jesuits; and this vessel was so beaten about by the southwest wind that, bearing off to the east, he was obliged to stand for the Azores, 500 leagues from Virginia. They now killed all the horses that had been taken from Port Royal, which they ate in lieu of other provisions. At last they reached an island of the Azores, and then he said to the father: "God is provoked with us, and not with you,¹⁶ for the evil that we have made you suffer unjustly. But I am surprised that Frenchmen off there in the woods, in the midst of so much misery and apprehension, should have spread the rumor that you are Spanish; and they not only said it and assured us of it, but they signed the statement."

"Monsieur," said the father, "you know that, in spite of all the calumnies and slan-

¹⁴This sentence is very blind in the French. It has been interpreted in the light of Biard's Relation, from which the story was hastily compiled.

¹⁵I. e., Father Biard.

¹⁶The French reads here "et nous contre vous" (and we with you). Biard's text has "mais non pas contre vous." It is evident that the copyist, or compositor, substituted "nous" for "non pas." Cf. *Jesuit Relations*, iv, 56, 57.

SAMUEL DE CHAMPLAIN

ders, I never spoke ill of those who accused me; you are witness of the patience that I have had in the face of such adversity, but God knows the truth. Not only have I never been in Spain, nor has any of my relatives, but I am a good and loyal Frenchman in the service of God, and of my King, and I shall always show, at the peril of my life, that they are wrong who slander me, and who call me Spanish. God forgive them, and may He be pleased to deliver us from their hands, and you particularly, for our good, and let us forget the past."

Then they went to anchor in the roadstead of the island of Fayal, which is one of the Azores; but they were obliged to anchor in this harbor¹⁷ and to hide the fathers in some place in the hold of the ship, and make them give their word that they would not reveal themselves, which they promised.

The ship was inspected by the Portuguese, who went down where the fathers were. The latter saw them without making any sign; and, nevertheless, if they had made themselves known to the Portuguese, they would have been delivered at once, and all the English would have been

¹⁷I. e., they finally had to enter the harbor, instead of anchoring outside in the roadstead.

VOYAGES AND EXPLORATIONS

hanged; but these inspectors, as a result of not looking carefully, did not see the Jesuit fathers at all, and went back to land; and thus the English were delivered from the danger in which they were of being hanged. They went to fetch all that they needed, then weighed anchor, put to sea, and expressed many thanks to the fathers, whom they caressed; and, no longer thinking them Spanish, they treated them as kindly as possible; they admired their great constancy and virtue in enduring the things that they had said to them, and were nothing but kindness and witnesses of good friendship until they reached England; the fathers having shown them in this way what was contrary to the opinion of a good many enemies of the Catholic church and to the prejudice of the truth, namely: that their doctrine teaches that it is not necessary to keep the faith with heretics.

At last Argall¹⁸ reached the harbor of Milfier,¹⁹ in the year 1614, in the province of Wales, where the captain was imprisoned for having neither passport nor com-

¹⁸Champlain here, in hurried compilation, forgot that Argall got back safely to Virginia, and that it was Turnel who was driven to the Azores and then went to England. See above, p. 151.

¹⁹Milford.

SAMUEL DE CHAMPLAIN

mission. His General had it and had become separated from him, as his Vice-Admiral had done.²⁰

The Jesuit fathers told how it all took place, and afterward Captain Argall²¹ was released, and returned to his ship, and the fathers were kept on land, loved and cherished by many people. And, in consequence of the account that the captain of their ship gave of what took place in the Azores, the news came to London, to the Court of the King of Great Britain, where the ambassador of His Most Christian Majesty hastened on the release of the fathers. They were conducted to Dover, and from there went to France, and withdrew to their College in Amiens, after having been nine months and a half in the hands of the English.

Sieur de la Motte also arrived in England at the same time, in a vessel which came from the Bermudas, having been to Virginia. He was captured in his ship and arrested, but released through the media-

²⁰Argall probably had the commission, but whether he is referred to by the "General" or "Vice-Admiral" is not clear. Only one superior to Turnel is mentioned by Biard. *Jesuit Relations*, iv, 68-69.

²¹Turnel.

VOYAGES AND EXPLORATIONS

tion of Monsieur du Biseau, at that time ambassador of the King in England.

Madame de Guercheville, having been informed of all this, sent La Saussaye to London to ask for the restoration of the ship, and that was all that one could obtain at that time. Three Frenchmen died in Virginia and four remained there while a great effort was being made for their release.

The fathers baptized there thirty little children, except three who were baptized at the approach of death.²²

It must be admitted that this enterprise was thwarted by many misfortunes that one could well have avoided at the beginning, if Madame de Guercheville had given three thousand six hundred livres to Sieur de Monts, who wished to have a settlement at Quebec, and everything quite different. I spoke of it two or three times to the Reverend Father Coton, who managed this affair. He would have liked to have the treaty made with few conditions, or by other means, which could not be to the advantage of this Sieur de Monts, which was the reason why nothing was done; although

²²Too hastily condensed. Biard says the Jesuits baptized "about twenty, and these were little children, except three," etc. *Jesuit Relations*, iv, 87.

SAMUEL DE CHAMPLAIN

I was able to explain to this father what advantages he could have in the conversion of the infidels, as well as for the commerce and traffic that could be carried on by means of the great River Saint Lawrence much better than in Acadie, which is difficult to secure, on account of the infinite number of its harbors, which cannot be guarded without large forces. Acadie, furthermore, is little peopled with savages; and, in addition, one cannot get through these regions into the interior, where there are a number of inhabitants of sedentary character. This can be done by the River Saint Lawrence much more easily than by the shores of Acadie.

Still further [I told him] that the Englishman²³ who was fishing at that time near some islands 13 to 14 leagues from the Island of Mount Desert, which is at the mouth of the River Pemetegoet, would do what he could to injure our men, as he was near Port Royal and other places. This could not then be expected at Quebec, where the English are not acquainted at all. If this Madame de Guercheville had

²³The singular number here should probably be a plural. Perhaps the text was dictated to a copyist who, in the phrase, *faisait alors ses pesches*, may have written "*faisait*" for "*faisaient*."

VOYAGES AND EXPLORATIONS

taken possession of Quebec at that time, one could have had assurance that by the watchfulness of the Jesuit fathers, and the instructions that I could have given them, the country would have been much better supplied; and that the Englishman would not have found it stripped of provisions and of arms, and would not have taken possession of it, as he has done in these last wars.²⁴ He has done this as a result of the acts of some bad Frenchmen, added to the fact that then these fathers did not have with them any man to conduct their affairs, except La Saussaye, who was little experienced in knowledge of places. But it is in vain that men talk and act; one cannot avoid what it pleases God to arrange.

All this shows how enterprises planned in haste, and without any solid foundation, and carried out without regard for the real substance of the affair, always come out badly.

²⁴Champlain refers to the capture of Quebec by the Kirkes in 1629. The story is told in Parkman, *Pioneers of New France*, 435-445.

SAMUEL DE CHAMPLAIN

CHAPTER II

Second undertaking of *Sieur de Monts*. Advice that the author gave him. Obtains commission from the King. His departure. Buildings that the author makes in *Quebec*. Outcries against *Sieur de Monts*.

LET us return and follow the second undertaking of *Sieur de Monts*, who did not lose courage at all, and did not wish to dally in so good a course. The Reverend Father *Coton* having refused to come to an agreement with him about the 3,600 livres, he spoke especially with me of his plans. I gave him counsel, and advised him to go to settle on the great River *Saint Lawrence*, with which I was familiar through the voyage that I had made to it;¹ and I gave him a taste of the reasons why it was more appropriate and convenient to inhabit that place than any other. He resolved upon it; and with this end he spoke of it to His Majesty, who agreed with him, and gave him a commission to go to settle in the country. And to enable him to sustain the expense more easily, he interdicted the traf-

¹In 1603. See below, vol. ii, pp. 151-229.

VOYAGES AND EXPLORATIONS

fic of furs to all his subjects for one year only.²

For this purpose he had two ships equipped at Honfleur and made me his lieutenant in the country of New France in the year 1608. Pont Gravé started first to go to Tadoussac, and I went after him in a ship loaded with things necessary and suitable for a settlement. God favored us so fortunately that we arrived at the harbor of Tadoussac,³ on that river, at which place I had all the goods unloaded, with the men, laborers and artisans, to go up the river to find a place convenient and suitable for a settlement. When I had found the narrowest place in the river, which the natives call Quebec,⁴ I had a settlement built and established there, and had the ground cleared, and had some garden plots made. But while we were working with so much labor, let us see what was going on in France with regard

²The commission is given in *Voyages of Champlain*, II, 160-163; and in the original in Laverdière, *Voyages*, 1613, 136-137.

³June 3, 1608.

⁴Champlain omits here the incidents of the stay at Tadoussac, of his exploration of the Saguenay and of the voyage to Quebec. Cf. *Voyages of Champlain*, II, 164-175. Some of the details are inserted below, p. 168, ff.

SAMUEL DE CHAMPLAIN

to the carrying out of this undertaking.

Sieur de Monts had stayed in Paris, on account of some affairs of his son; and, while hoping that His Majesty would continue to allow him this commission, he had not been long in peace when it was insisted more than ever that he ought to go to the Council. The Bretons, Basques, Rochelois and Normans renewed the complaints;⁵ and, gaining the ears of those who wished to befriend them, said that it was a people that was concerned, that it was a public interest. But it was not perceived that these were envious people, who did not ask for their own good, but rather for their ruin, as will become evident in the sequel of this narrative.

However that may have been, the commission was revoked for the second time, without any power to stop it. It would be necessary, on this account, to return from Quebec the next spring; so that he who should put the most into it would lose the most; and this would, no doubt, be Sieur de Monts, who wrote me what had taken place. This gave me occasion to return to France to view these commotions. The building remained in the hands of Sieur de Monts, who

⁵I. e., against De Monts's monopoly privileges.

VOYAGES AND EXPLORATIONS

came to an agreement in regard to it with his partners some time later. He, meanwhile, put it into the hands of a certain merchant of La Rochelle, under stated conditions, to serve them as a shelter where they could deposit their merchandise and trade with the savages. It was at that time that I made the overture to the Reverend Father Coton, for Madame de Guercheville,⁶ to see if she wished to have it; which could not be, as I have said above, since the trade was open until another commission should be issued which should afford a better regulation than in the past.

I went to find *Sieur de Monts*, to whom I explained all that had taken place in our winter quarters, and what I had been able to discover and learn of the conveniences that one might hope for on the great River St. Lawrence; which was the occasion of my seeing His Majesty, in order to give him a special account, in which he took great pleasure. *Sieur de Monts*, in the meantime, carried away by a desire to keep his hold on this matter at whatever cost, at once did all that he could to have a new commission. But those who envied him, by means of favor at court, had so shaped matters that his labor was in vain. Ob-

⁶See above, p. 158.

SAMUEL DE CHAMPLAIN

serving this, on account of the desire that he had to see his lands peopled, he did not give up wishing to continue the settlement, even without a commission, and to have the interior of the country up this river explored more in detail. And for the execution of this enterprise he united with the Company to have some vessels equipped, as did several others, to whom the traffic was not interdicted, who followed in our footsteps and carried off the gain derived from the pains of our labor, without having been willing to contribute to the undertakings.

When the ships were ready, Pont Gravé and I set sail⁷ to make this voyage in the year 1610, with artisans and other laborers, and hindered by bad weather. Arriving at the harbor of Tadoussac,⁸ and at that of Quebec, we found each one there in good spirits.

Before going farther I have thought that it would not be out of place to write a description of the great river, and of some discoveries that I made up this St. Lawrence River; of its beauty and the fertility of the country, and of what took place in the wars against the Iroquois.⁹

⁷March 7.

⁸April 26.

⁹Champlain now goes back to the events of 1608 in Canada.

VOYAGES AND EXPLORATIONS

CHAPTER III

Departure of the author, to go to settle the great River St. Lawrence. Description of the harbor of Tadoussac; of the River Saguenay; of the Isle of Orleans.

AFTER having recounted to the late King all that I had seen and discovered, I set sail to go to settle the great River St. Lawrence at Quebec, as the lieutenant, at that time, of Sieur de Monts. I left Honfleur April 13, 1608, and the third of June arrived at Tadoussac,¹ 80 or 90 leagues from Gaspé, and anchored in the roadstead of Tadoussac, which is one league from the harbor. This is like a cove at the mouth of the River Saguenay, where there is a tide that is very strange on account of its swiftness. Here sometimes violent winds rise and bring on great cold. It is said that it is 45 or 50 leagues from the harbor of Tadoussac to the first fall of this river,² which comes from the north northwest. This harbor is small, and it could not hold more than twenty ships. There is enough water, and it lies in the shelter

¹See above, p. 162.

²The Saguenay.

SAMUEL DE CHAMPLAIN

of the River Saguenay and of a little rocky island which is almost intersected by the sea. The rest is high mountains, where there is little land, unless it be rocks and sand covered with trees, such as firs and birches. There is a little pond near the harbor enclosed by mountains covered with trees. At the entrance of the harbor there are two points, one on the southwest side running out nearly a league into the sea, which is called the Point aux Allouettes;³ the other on the northwest side running out an eighth of a league and called Rocky Point.⁴ The winds from the south southeast strike the harbor, but are not to be feared, but the wind from the Saguenay certainly is. The two points just mentioned are dry at low tide.

In this place there were a number of savages who came there to trade in furs. Many of them came to our ship with their canoes, which are eight or nine feet long and about a foot or a foot and a half wide in the middle, and diminish at both ends. They are very apt to upset if one does not know well how to manage them. They are made of birch bark, strengthened inside with little hoops of white cedar, very neatly arranged,

³Lark Point.

⁴Now called Pointe aux Vaches.

VOYAGES AND EXPLORATIONS

and they are so light that a man can easily carry one of them. Each one can carry the weight of a hogshhead. When they wish to cross the land, to go to some river where they have business, they carry them with them. From Choüacoet⁵ all along the coast as far as Tadoussac they are all alike.

I visited some places on the River Saguenay, which is a beautiful river and very deep, say from 80 to 100 fathoms. Fifty leagues from the mouth of the harbor, it is said, there is a great waterfall,⁶ which comes from a very high place and with great impetuosity. There are some very barren islands in this river, being nothing but rocks covered with small firs and heather. The river is half a league wide in some places and a quarter at its mouth, where the current is so strong that it still flows out when the tide is three-quarters flood in the St. Lawrence. All the land that I saw consisted of nothing but mountains and promontories of rock, for the most part covered with firs and birches—a country very disagreeable from whatever point of view; in short, it is a real desert

⁵The Saco River, Maine.

⁶Probably the falls of the Chicoutimi, 45 feet high. The Chicoutimi empties into the Saguenay about 95 miles above Tadoussa

SAMUEL DE CHAMPLAIN

without inhabitants. When I went hunting in the places that seemed to me the most pleasant I found nothing but little birds like swallows, and some river birds that come there in summer. Except those there are none at all, on account of the excessive cold of that region. This river comes from the northwest.⁷

The savages informed me that after passing the first rapid they pass eight others, then go a day without finding any; and then again they pass ten others and come to a lake,⁸ which takes them three days. In each day they can easily make ten leagues going up stream. At the end of the lake there are people who are nomads. There are three rivers that empty into this lake. One comes from the north, very near the sea,⁹ where they said it was a great deal colder than in their country; the other two come from other regions of the interior, where there are tribes of savages who are nomads and live by hunting only. This is the region where our savages go to carry the merchandise that we give them in ex-

⁷Cf. the narrative of the voyage of 1603, vol. ii, p. 175, below.

⁸Lake St. John.

⁹The Mistassini, by which the Indians went to Hudson Bay. L.

VOYAGES AND EXPLORATIONS

change for the furs that they have, such as beaver, marten, lynx and others, which are there in great quantity and which they then bring to our ships. These northern people said to our men that they see the salt water; and if that is true, as I think is certainly so, it cannot be anything but a gulf which cuts into the land on the north.¹⁰ The savages said that it might be forty or fifty days' journey from this sea on the north to the harbor of Tadoussac, because of the difficulty of the roads and rivers, and because the country is very mountainous and is covered with snow the greater part of the year. This is a true statement of what I learned of this stream. I have often wished to make this discovery, but I have not been able to do it without the savages, who have been unwilling to have me or any other of our men go with them. Nevertheless, they have promised me that I shall go.¹¹

¹⁰Hudson Bay.

¹¹Champlain never had this opportunity. Hudson Bay was first approached from the land side in 1662 by Radisson and Chouart, more commonly called Grosseilliers, his landed title. Cf. S. E. Dawson, *The St. Lawrence*, 323-325.

SAMUEL DE CHAMPLAIN

CHAPTER IV

Discovery of the Hare Island; of the Island of Coudres, and of the Falls of Montmorency.

I LEFT Tadoussac¹ to go to Quebec, and passed near an island which is called Hare Island, about six leagues from this port. It is two leagues from the land on the north and nearly four leagues from the land on the south. From Hare Island we went to a little river which is dry at low tide, where at some 700 to 800 paces inland there are two waterfalls. We named it Salmon River,² on account of catching some there. Running along the northern shore we came to a point that projects into the sea, which we named Cape Dauphin,³ three leagues from Salmon River. From there we went to a cape that we named Eagle Cape,⁴ eight leagues from Cape Dauphin. Between the two there is a large bay, at the head of which is a little river that dries up at low tide, and we named it Flat River or Malle Baye.⁵

¹June 30, 1608.

²It is now Black River. S.

³Cape Salmon.

⁴Goose Cape. S.

⁵The modern spelling is Malbaie; part of it is now named Murray Bay.

VOYAGES AND EXPLORATIONS

From Eagle Cape we went to the Isle aux Coudres,⁶ a league distant and about a league and a half long.⁷ It is somewhat level and grows narrower at the ends. At the western end there are some meadows and rocky points, which project somewhat into the river; and on the southwest side there are many reefs; yet it is attractive, on account of the woods that surround it. It is distant about half a league from the land on the north, where there is a little river that comes from some distance in the interior, which we named Rivière du Gouffre,⁸ since abreast of it the tide runs with extraordinary swiftness; and, although it looks calm, it is always much in motion, its depth being very great; but the river itself is shallow, and there are a great many rocks at its mouth and all about it. From the Isle aux Coudres we coasted along the shore and reached a cape that we named the Cap de Tourmente,⁹ which is seven

⁶The name is still in use. It means Hazel Island.

⁷The translation here follows Laverdière's reconstruction of the text. *Voyages*, 1632; part I, p. 134.

⁸The name is still in use. It means River of the Whirlpool. S.

⁹Cape Tourmente, 1920 feet high. The name means Tempest Cape.

SAMUEL DE CHAMPLAIN

leagues from it, and we called it that because, with ever so little wind, the water rises as if it were high tide. In this place the water begins to be fresh. From there we went to the Island of Orleans, two leagues, on the south side of which there are a number of islands—low, covered with trees and very pleasant, full of large meadows and a great deal of game. Some of these islands are, as far as I could judge, two leagues long, and others a little more or less. All about them there are a great many rocks and shallows that are very dangerous to cross. These are about two leagues distant from the mainland on the south. All this shore, both on the north and on the south, from Tadoussac to the Island of Orleans, is mountainous and the soil is very poor, with nothing but pines, firs and birches, and some very bad rocks; and in the greater part of these places one would not know how to go.

Then we skirted the Island of Orleans on the south side, which is a league and a half from the mainland, and on the north side it is half a league. It is six leagues long and one league wide, or a league and a half in some places. It is very pleasant on the north side, owing to the great extent of woods and meadows; but the passage on

VOYAGES AND EXPLORATIONS

that side is very dangerous, because of the great number of points and rocks between the mainland and the island. There are a great many beautiful oaks on the island, and in some places nut trees, and on the edges of the woods vines and other trees such as we have in France.

This place is the beginning of the beautiful and fertile country of the great river and is 120 leagues from its mouth. At the end of the island there is a torrent of water from the north side, which I named the Falls of Montmorency. It comes from a lake which is about ten leagues in the interior and it falls from a height of nearly 25 fathoms,¹⁰ above which the land is level and pleasant to look at, although inland there are seen high mountains, which seem to be from 15 to 20 leagues distant.

CHAPTER V

Arrival of the author at Quebec, where he made his place of abode. Habits of the savages of that country.

FROM the Island of Orleans to Quebec it is one league. When I arrived there on

¹⁰The height of the falls is given as 265 feet in Baedeker's *Canada*, p. 53.

SAMUEL DE CHAMPLAIN

July 3¹ I looked for a suitable place for our buildings, but I could not find any more convenient or better situated than the point of Quebec, so called by the savages, which is filled with nut trees and vines. I immediately employed some of our workmen in cutting them down, in order to put our buildings there.² Some I set to sawing boards, some to digging a cellar and making ditches, and others I sent to Tadoussac with the boat to get our supplies. The first thing that we made was the storehouse in which to put our provisions under cover, which was promptly finished through the diligence of each one and the care that I had of it. Near this place is a pleasant river, where formerly Jacques Cartier passed the winter.³

While the ship-carpenters, the wood-

¹1608.

²The spot was near "where the Champlain Market now stands in the lower town of the present city, and partly on the site now occupied by the Church of Notre Dame des Victoires." S. E. Dawson, *The St. Lawrence*, 254.

³Champlain here omits the story of the conspiracy of the locksmith; the description of the buildings and a discussion of the site of Cartier's winter quarters in 1535, which he gave in his narrative of 1613. Cf. *Voyages of Champlain*, II, 176-188; Laverdière, *Voyages*, 1613, 148-161.

VOYAGES AND EXPLORATIONS

sawyers and other workmen, worked on our lodging I set all the others at clearing the land about the building, in order to make the garden-plots in which to sow grain and seeds, to see how they would all turn out, for the soil appeared very good.

Meanwhile a great many savages were in cabins near us, fishing for eels, which begin to come about September 15 and go away on October 15. At this time all the savages live on this manna and dry enough of it to last through the winter to the month of February, when the snow is about two and a half feet deep, or three at the most. And when the eels and other things that they collect have been prepared they go to hunt the beaver, which they do until the beginning of January. They were not very successful in the beaver hunt, for the water was too high and the rivers had overflowed, as they told us. When their eels give out they have recourse to hunting the elk⁴ and other wild beasts, which they can find, while waiting for the spring. At that time I was able to supply them with several things. I made a special study of their customs.

All these people are so much in want that sometimes they are driven to live on certain

⁴I. e., the moose.

SAMUEL DE CHAMPLAIN

kinds of shellfish and to eat their dogs and the skins with which they protect themselves against the cold. If some one should show them how to live and teach them how to till the soil, and other things, they would learn very easily, for there are a good many of them who have good judgment and reply intelligently to what is asked of them. There is an evil tendency among them to be revengeful, and to be great liars, and one cannot rely upon them, except with caution and when one is armed. They make promises enough, but keep few of them, most of them being without law, as far as I could see, and, besides, full of false beliefs. I asked them what ceremonies they employed in praying to their god; they told me that they made use of none, except that each prayed in his heart as he wished. This is why they have no law, and do not know what it is to worship God and pray to Him, but live like brute beasts; but I think that they would soon be converted to Christianity if some people would settle among them and cultivate their soil, which is what most of them wish. They have among them some savages whom they call Pilotois, who, they believe, talk with the devil face to face, who tells them what they must do, whether in case of war or in regard to other matters;

VOYAGES AND EXPLORATIONS

and if he should command them to carry out a certain enterprise they would obey his command at once. They believe, also, that all the dreams that they have are true; and, in fact, there are a great many of them who say that they have seen and dreamed things which have come to pass or will take place. But, to tell the truth about the matter, these are diabolical visions, which deceive them and lead them astray. This is all that I have been able to learn about their brutish belief.

All these people are well-built, without deformity, and are active. The women are equally well-formed, plump, and of a tawny complexion, because of certain pigments which they put on which make them look olive-colored. They are dressed in skins; a part of the body is covered, the rest is naked; but in winter they make up for it, for they are dressed in good furs, like elk, otter, beaver, bear, seal, deer and roe, which they have in great quantity. In winter, when there is a great deal of snow, they make a sort of racquets, which are three or four times as large as those in France,⁵ which they attach to their feet, and in this way they can go in the snow without sinking in; without them they could not hunt

⁵I. e., the racquets used for tennis.

SAMUEL DE CHAMPLAIN

or go in many places. They have an odd sort of marriage, namely: when a girl is fourteen or fifteen years old, and she has several suitors, she may associate with all of them that she likes. Then at the end of five or six years she makes her own choice from them of a husband, and they live together to the end of their lives. But if, after living some time together, there are no children, then the man may unmarry himself and take another wife, saying that his own is good for nothing. Thus the girls are freer than the women.

After marriage they are chaste, and the husbands are, for the most part, jealous. They give presents to the fathers or relatives of the girls whom they have married. These are the ceremonies and ways that they employ in their marriages.

As for their burials, when a man or a woman dies, they dig a big grave, where they put all the possessions that they had, such as kettles, furs, axes, bows, arrows, robes and other things; then they put the body in the grave and cover it with earth, and put a great many large pieces of wood on top, and one piece erect. This they paint red on the upper part. They believe in the immortality of the soul, and say that they will be happy in other lands with their rela-

VOYAGES AND EXPLORATIONS

tives and friends who are dead. In the case of captains and others in positions of authority, they come, after the death, three times a year for a celebration and dance, and sing on the grave.

They are very timid and constantly fear their enemies, and scarcely sleep at all wherever they are, although I reassured them every day as much as I could and advised them to do as we do, namely: let some watch while others sleep, and let each one have his arms ready, like him who was on guard; and that they should not take dreams for the truth, on which to rely. But these teachings were of little use, and they said that we understood better than they how to protect ourselves against these things, and that in time, if we should come to live in their country, they would learn.

CHAPTER VI

Planting of vines at Quebec by the author. His kindness to the poor savages.

ON the first of October I had wheat planted, and on the fifteenth rye.

On the third of the month there was

SAMUEL DE CHAMPLAIN

white frost in some places, and the leaves began to fall from the trees on the fifteenth.

On the twenty-fourth of the month I had some native vines planted, which came on very finely. But after I had left the settlement, to come to France, they were all spoiled from neglect, which was a great grief to me on my return.

On November 18 there was a great snow-fall, but it stayed only two days on the ground.

On February 5¹ it snowed hard.

On the twentieth of the month we saw some savages on the other side of the river, begging us to come to their aid, but it was beyond our power to do so, on account of the great amount of drifting ice in the river. Hunger pressed these poor, miserable creatures so hard that, not knowing what to do, they resolved to die—men, women and children—in the attempt to cross the river, in the hope that they cherished that I would come to their rescue in their extreme want. Having then taken this resolution, the men and women took their children and got into their canoes, thinking to reach our side through an opening in the ice that the wind had made; but they were scarcely in the middle of the river before

¹1609.

VOYAGES AND EXPLORATIONS

their canoes were caught and broken into a thousand pieces by the ice. They had the presence of mind to throw themselves, with their children, whom the women carried on their backs, upon a large cake of ice. While they were on it one could hear them crying out in such a way as to excite great pity; and they expected nothing but death. But fortune so favored these poor wretches that a big piece of ice struck so hard against the side of the one upon which they were that it threw them on the shore. When they saw this favorable turn, they reached the shore with as much joy as they had ever had in doing so, in spite of the great hunger from which they had suffered. They came to our settlement looking so thin and worn that they seemed like skeletons, most of them not able to stand up. I was astonished to see them and at the way in which they had crossed, when I thought of how feeble and weak they were. I had bread and beans given to them, but they could not wait for them to be cooked to eat them; and I loaned them some bark of trees to cover their cabins. As they were making their cabins they discovered a piece of carrion that I had thrown out nearly two months before to attract foxes, of which we caught black and red ones, like those in

SAMUEL DE CHAMPLAIN

France but having much more fur. This carrion was a sow and a dog, which had been exposed to the warm weather and the cold. When the weather was growing mild it smelled so strong that one could not stay near it. Nevertheless, they lost no time in seizing it and taking it to their cabin, where they devoured it at once half-cooked, and never did meat seem to taste better to them. I sent two or three men to warn them that they should not eat it, if they did not wish to die. As they approached their cabin they smelled such a stench of this half-warmed-up carrion, of which each savage had a piece in his hand, that they thought they should vomit, and so they scarcely stopped there at all. However, I did not fail to help them as much as I could; but it was little, considering their numbers, and in one month they would have eaten up all our provisions, if they could have got hold of them, they are such gluttons. For when they have food they do not keep anything in reserve, but make good cheer with it continually, day and night; then afterward they die of hunger.

They did another thing, besides, as distressful as the first. I had had a dog placed in the top of a tree, to allure martens and birds of prey. I took pleasure in

VOYAGES AND EXPLORATIONS

this, inasmuch as, ordinarily, this carrion was set upon by them. These savages went to the tree, and, since they were too weak to climb it, cut it down and at once took away the dog, which was nothing but skin and bones, with the head tainted and smelling bad; and it was at once devoured.

This is the pleasure that they have the most often in winter. In summer they are able to support themselves, and to get provisions, so as not to be attacked by such extreme need, from the rivers, which are full of fish, and from hunting birds and wild animals. The soil is very fine and good for cultivation, if only they would take the trouble to sow Indian corn, as all their neighbors do—the Algonquins, Hurons and Iroquois—who are not assailed with so cruel famines, because they know how to provide against them by the care and foresight that they exercise; with the result that they live happily, compared with these Montagnais, Canadians² and Souriquois who live along the seacoast. The snow and ice stay on the ground five months; that is, from the month of December until toward the end of April, when it is almost

²The name applied in Champlain's time to the Indians along the St. Lawrence, below the Saguenay. L.

SAMUEL DE CHAMPLAIN

all melted. From Tadoussac to Gaspé, Cape Breton, Newfoundland and the Great Bay³ the snow and ice continue in most places until the end of May, at which date sometimes the mouth of the great river is sealed with ice; but at Quebec there is not any, which shows a strange difference for 120 leagues of distance in longitude, for the mouth of the river is at latitude 49°, 50° and 51°, and our settlement is in latitude 46½°. As for the country, it is beautiful and pleasant, and brings all sorts of grain and seeds to maturity. There are all the kinds of trees there that we have in our forests on this side of the sea, and a great many fruits, although they are wild, because they are not cultivated; such as walnuts, cherries, plum trees, vines, raspberries, strawberries, green and red gooseberries and a good many other little fruits which are rather good there. There are also several kinds of good herbs and roots. There are plenty of fish to catch in the rivers, and there are a great many meadows and an enormous quantity of game.

On the eighth of April at this season⁴ the snow was all melted and, nevertheless,

³The part of the Gulf of St. Lawrence between Labrador and Newfoundland.

⁴1609.

VOYAGES AND EXPLORATIONS

the air was still pretty cold until into May, when the trees began to put forth their leaves.⁵

CHAPTER VII

Journey from Quebec to the Island of St. Eloi, and the meeting that I had with some Algonquin and Ochtaiguin savages.

WITH this purpose¹ I departed on the eighteenth of the month. The river begins to widen here, sometimes to a league and even a league and a half in some places. The country becomes more and more beautiful. The banks of the river are partly hills and partly level land without rocks, except a very few. As for the river, it is dangerous in many places, because of sand-bars and rocks, and is not good to sail in without the lead in hand. The river is very abundantly supplied with several sorts of

⁵Champlain omits here the account of the scurvy which he gave in the narrative of 1613. Cf. *Voyages of Champlain*, II, 197-200; Laverdière, *Voyages, 1613*, 170-172.

¹That is, to explore the country of the Iroquois. June 7 Champlain had left Quebec, to go to Tadoussac on business; he now returned and is starting from Quebec, June 18. See references in preceding note.

SAMUEL DE CHAMPLAIN

fish, not only such as we have on this side of the sea, but others that we have not. The country is all covered with large, high forests of the same kinds of trees that we have about our settlement. There are also many vines and nut trees on the bank of the river and a great many little brooks and rivers which are navigable only with canoes. We passed near Point St. Croix.² This point is sandy. It projects a little into the river, and is exposed to the northwest wind, which beats upon it. There are some meadows, but they are submerged every time the tide is high. The tide falls nearly two and a half fathoms. This passage is very dangerous to go through, on account of the quantity of rocks that lie across the river, although there is a good channel which is very crooked, where the river runs like a mill-race, and one must take plenty of time for the passage. This place has deceived a great many people, who thought that they could not go through it except at high tide for lack of a channel, but we have found the contrary. As for going down, one can do it at low tide; but to go up would be very difficult, unless there should be a high wind, because of the great current; and so it is necessary to wait until

²Point Platon. Dawson, *St. Lawrence*, 236.

VOYAGES AND EXPLORATIONS

the tide is one-third flood to pass, when the current in the channel is 6, 8, 10, 12 and 15 fathoms deep.

Continuing our course we came to a river which is very pleasant. It is nine leagues from St. Croix and twenty-four from Quebec. We named it St. Mary's River.³ The whole length of this river from St. Croix is very beautiful.

Continuing our route I met two or three hundred savages, who were in cabins near a little island called St. Eloi, a league and a half from St. Mary. We investigated and found that they were some tribes of savages called Ochateguins⁴ and Algonquins, who were going to Quebec, to assist us in exploration of the countries of the Iroquois, against whom they carry on mortal combat, sparing nothing that belongs to them.

After having recognized them I went ashore to see them and asked who their chief was. They told me that they had two of them—one named Iroquet and the other Ochasteguin, whom they pointed out to me—and I went to their cabin, where they received me well, according to their custom. I began to explain to them the purpose of

³Now the Ste. Anne. L.

⁴The Hurons.

SAMUEL DE CHAMPLAIN

my journey, with which they were very much pleased; and, after talking of several things, I withdrew. Some time afterward they came to my shallop, where they made me accept some skins, showing a good many signs of pleasure, and then they returned to land.

The next day the two chiefs came to find me. Then they remained some time without saying a word, meditating and smoking constantly. After having thought it all over, they began to harangue in a loud voice all their companions who were on the river bank, their arms in their hands, listening very attentively to what their chiefs said to them, namely: that nearly ten moons ago, as they reckoned, Iroquet's son had seen me, and that I had given him a kind reception, and that we desired to assist them against their enemies, with whom they had been at war for a long time, because of a great deal of cruelty that the enemy had shown toward their tribe, on the pretext of friendship; and that, having always desired vengeance since that time, they had asked all the savages on the bank of the river to come to us, to form an alliance with us, and that they never had seen Christians, which had also induced them to come to see us, and that I might do as I

VOYAGES AND EXPLORATIONS

wished with them and their companions; that they had no children with them, but men who knew how to fight and were full of courage, and who were familiar with the country and the rivers in the country of the Iroquois; and that now they begged me to return to our settlement, that they might see our houses; that after three days we should return all together to the war, and that for a sign of great friendship and joy I should have muskets and arquebuses fired, and that they would be very much pleased; which I did. They gave great cries of astonishment, and especially those who never had heard nor seen them before.

After I had heard them I replied to them that to please them I should be very glad to go back to our settlement, to give them more pleasure, and that they might infer that I had no other intention than to engage in war, since I carried with me nothing but arms, and not merchandise for barter, as they had been led to understand; that my desire was only to accomplish that which I had promised them; and that if I had known of any one who had made evil reports to them, I should regard such as enemies more than they themselves did. They told me that they did not believe any of it, and that they had heard nothing said;

SAMUEL DE CHAMPLAIN

but the contrary was true, for there were some savages who told ours. I contented myself in waiting for an opportunity to be able to show them in reality something different from what they could have expected of me.

CHAPTER VIII

Return to Quebec, and then continuation with the savages to the Rapids of the River of the Iroquois.

THE next day we all set out together to go to our settlement, where they enjoyed themselves five or six days, which passed in dances and festivities, because of the desire that they felt that we should be in the war.

Pont Gravé came at once from Tadousac with two little barks full of men, in response to a letter in which I begged him to come as promptly as he could.

When the savages saw him coming they rejoiced more than before, especially as I told them that he had given me some men to assist them, and that perhaps we should go together.

On the twenty-eighth of the month I left

VOYAGES AND EXPLORATIONS

Quebec, to assist the savages. On the first of June¹ we reached St. Croix, 15 leagues from Quebec, with a shallop equipped with all I needed.

I left St. Croix on June [July] 3, with all the savages, and we passed the Trois Rivières,² which is a very beautiful country, covered with a great many beautiful trees. From this place to St. Croix it is 15 leagues. At the mouth of this river there are six islands, of which three are very small and the others from 1500 to 1600 paces long, very pleasant to look at; and near Lake St. Peter, about two leagues up the river, there is a small rapid, which is not very difficult to pass. This place is in latitude 46 degrees, less some minutes. The savages of the country gave us to understand that some days' journey off there is a lake through which the river passes. The lake is ten days' journey long,³ and then one passes some falls, and afterward three or four more lakes five or six days' journey long; and at the end there are four or five leagues by land and then one enters directly into another lake, where the Sa-

¹This should be July.

²The river is now the St. Maurice. The town is Three Rivers. It is at the head of tidewater.

³Lake Ontario.

SAMUEL DE CHAMPLAIN

guenay has its principal source.⁴ The savages come from this place to Tadoussac. The Trois Rivières is twenty days' journey for the savages; and they say that at the end of this river there are some people who are great hunters, without a fixed abode, and that they can see the Northern Sea⁵ in less than six days' journey. What little land I have seen is sandy, rather high, with hills crowded with pines and firs on the river banks; but about a quarter of a league inland the woods are very beautiful and open, and the country is level.

Continuing our route as far as the entrance to Lake St. Peter, which is a very pleasant and level country, we crossed the lake in 2, 3 and 4 fathoms of water. It may be eight leagues long and four wide. On the north side we saw a very pleasant river extending some fifty leagues into the interior; and I named it St. Suzanne;⁶ and on the south side there are two of them, one called Rivière du Pont⁷ and the other Rivière de Genes⁸—which are very beautiful and in a fine, fertile country. The water is almost still in the lake, which is very full

⁴Champlain here fell into a misunderstanding of what the Indians meant.

⁵Hudson Bay.

⁶The River du Loup. L.

⁷The Nicolet. L.

⁸The Yamaska. L.

VOYAGES AND EXPLORATIONS

of fish. On the north side land can be seen some 12 or 15 leagues from the lake, which is rather mountainous. Having crossed the lake we passed by a great number of islands of different sizes, where there are a great many nut trees and vines, and beautiful meadows, with quantities of game and wild animals, which come from the mainland to these islands. The fish there are more plentiful than in any other place in the river that we have seen. From these islands we went to the mouth of the River of the Iroquois,⁹ where we stayed two days and refreshed ourselves with good venison, birds and fish, which the savages gave us. Here there was some controversy among them on the subject of the war, with the result that there were only a certain number of them who decided to go with me, and the others returned to their country with their wives and the merchandise that they had got in trade.

Starting from the mouth of this river, which is about 400 or 500 paces wide and is very beautiful, running southward,¹⁰ we reached a place which is in latitude 45°, about 22 or 23 leagues from Trois Rivi-

⁹The Richelieu.

¹⁰The Richelieu runs north. Champlain, however, often speaks of the course of a river in this

SAMUEL DE CHAMPLAIN

ères. The whole river, from its mouth to the first rapid,¹¹ which is 15 leagues, is very smooth and bordered with woods, as are all the other places named above, and of the same varieties. There are nine or ten beautiful islands before one reaches the first rapid of the Iroquois, which are about a league or a league and a half long, covered with a quantity of oaks and nut trees. The river is nearly half a league wide in some places, and is very full of fish. We did not find less than four feet of water. The entrance to the rapid is a sort of lake,¹² into which the water descends, which is about three leagues in circumference, and there are some meadows there where no savages are settled, on account of the wars. There is very little water at the rapid, which flows with great swiftness, and there are a great many rocks and stones, which prevent the savages from going up by water; but in returning they descend very well. All this country is very level, full of forests, vines

way, saying that the course of a certain river goes north when he means that one following up the course would go north.

¹¹The word "sault" is usually rendered "rapid" or "rapids" in this translation when these words would ordinarily be used by an English writer.

¹²Chambly Basin.

VOYAGES AND EXPLORATIONS

and nut trees. Up to this time no Christians had been as far as this place except us, and we had a good deal of trouble getting up the river with oars.

As soon as I had reached the rapids I took five men and we went ashore to see if we could get by this place, and we went about a league and a half without seeing any chance of it, unless we should venture in water running with great rapidity, where on both sides there were a great many stones which are very dangerous, and where the water was very shallow. The rapids may be 600 feet wide. And when we saw that it was impossible to cut the trees and make a way, with the few men that I had, I decided, by the advice of each of them, to do something different from what we had promised, inasmuch as the savages had assured me that the roads were easy; but we found the contrary true, which I have already said, which was why we returned from them to our shallop, where I had left some men to guard it, and to tell the savages, when they should arrive, that we had gone to explore along this rapid.

When we had seen what we wished to of this place, as we were returning we met some savages who had come to explore as we had done. They told us that all their

SAMUEL DE CHAMPLAIN

companions had reached our shallop. There we found them much pleased and satisfied that we had gone in this way without a guide, except for the reports that they had several times given us.

Having come back, and having seen what little chance there was of passing the rapids with our shallop, I was troubled; and I was much disappointed to return without having seen a large lake filled with beautiful islands and a great deal of beautiful country bordering the lakes, where their enemies live, as they had represented it to me. After thinking things over by myself, I resolved to go there to fulfill my promise and the desire that I felt, and I set out with the savages in their canoes and took with me two men who volunteered. For when our men saw, in good earnest, that I intended to go with their canoes, their hearts failed them, which resulted in my sending them back to Tadoussac.

I went directly to speak to the captains of the savages, and gave them to understand that they had told us the contrary to what I had seen at the rapids, namely, that it was beyond our power to go up it with the shallop; nevertheless, that this would not hinder me from aiding them as I had promised. This news saddened them very much,

VOYAGES AND EXPLORATIONS

and they wished to make another decision; but I told them and urged upon them that they ought to hold to their first plan; and that I, with two others, would go to the war with them in their canoes, to show them that, as for myself, I would not fail to keep my word to them, although I should be alone; and that, at that time, I did not wish to force any one of my companions to embark except those who volunteered, of whom I had found two, that I would take with me.

They were very much pleased at what I told them, and at hearing the decision that I had made, and they kept promising to show me beautiful things.

CHAPTER IX

Departure from the rapids of the Iroquois River. Description of a large lake. Of the encounter with the enemy that we had at this lake, and of the manner in which they attacked the Iroquois.

I LEFT these rapids of the Iroquois River on July 2.¹ All the savages began to carry

¹This date in all probability should be the 12th.
L.

SAMUEL DE CHAMPLAIN

their canoes, arms and baggage by land about half a league, in order to get by the swiftness and force of the rapids. This was quickly accomplished.

Then they put them all in the water, and two men in each boat, with their baggage; and they made one of the men from each canoe go by land about a league and a half, the length of the rapid, which is not so violent as at its mouth, except in certain places where rocks obstruct the river, which is not more than 300 or 400 paces wide. After we had passed the rapid, which was not without difficulty, all the savages who had gone by land by a pretty good path and level country, although there were a great many trees, re-embarked in their canoes. My men went by land, too, and I by water, in a canoe. They had a review of all their men and found that they had twenty-four canoes, with sixty men in them. When they had had their review, we continued on our way as far as an island three leagues long,² covered with the most beautiful pines that I had ever seen. They hunted, and caught some wild animals there. Going on farther, about three leagues from there, we encamped, to rest that night.

Immediately they all began, some to cut

²Sainte-Thérèse. L.

VOYAGES AND EXPLORATIONS

wood, others to strip off the bark of trees to cover their cabins, to provide shelter for themselves; others began to fell big trees for a barricade on the bank of the river about their cabins. They know so well how to do this that in less than two hours five hundred of their enemy would have had a good deal of trouble to attack them without losing a great many of their number. They do not barricade the side toward the river, where their canoes are drawn up, so as to be able to embark, if occasion requires.

When they were lodged they sent three canoes with nine good men, as is their custom in all their encampments, to reconnoitre for two or three leagues, to see if they can discover anything. Later these come back. They sleep all night, relying upon the exploration of these scouts, which is a very bad custom among them; for sometimes they are surprised while asleep by their enemies, who knock them in the head before they have a chance to get up to defend themselves.

Being aware of that, I explained to them the mistake that they were making, and told them that they ought to watch, as they had seen us do every night, and have men on the lookout, to listen and see if they saw anything; and that they should not live like

SAMUEL DE CHAMPLAIN

beasts. They told me that they could not keep watch, and that they worked enough by day in hunting; and, above all, when they go to war, they divide their bands into three parts, viz., one part to hunt, distributed in various places; one to constitute the main body, who are always under arms; and the other part as scouts, to explore along the rivers, to see if there is any mark or sign to indicate that their enemies have passed, or their friends. This they recognize by certain marks that the chiefs of different tribes exchange. These are not always alike, and they inform themselves from time to time when they are changed. In this way they recognize whether those who have passed are friends or enemies. The hunters never hunt in advance of the main body, or of the scouts, in order not to cause alarm or disorder, but in the rear, and in the direction where they do not expect their enemies; and they continue thus until they are two or three days' journey from their enemies, when they go at night by stealth, all in a body, except the scouts. And by day they retire within the thickest part of the woods, where they rest, without wandering off, or making any noise, or lighting any fire, even when necessary for food, during this time, in order not to be

VOYAGES AND EXPLORATIONS

noticed if, by chance, their enemies should pass. They do not make any fire, except for smoking; and they eat Indian meal cooked, which they soak in water, like porridge. They preserve this meal for times of need, and when they are near their enemies, or when they are retreating after an attack, they do not care to hunt, but retreat at once.

In all their encampments they have their Pilotois, or Ostemoy, a kind of persons who act as soothsayers, in whom these people believe. The soothsayer builds a cabin surrounded by sticks of wood, and covers it with his robe. When it is done he ensconces himself inside in such a way that he cannot be seen at all; then he takes hold of one of the posts of his cabin and shakes it, muttering some words between his teeth, by which he says he invokes the devil, who appears to him in the form of a stone and tells him whether they will find their enemies and kill many of them. This Pilotois lies flat on the ground, motionless, only making believe to speak to the devil; then suddenly he rises to his feet, talking and writhing in such a way that, although he is naked, he is all in a perspiration. All the people are about the cabin, seated on their buttocks like monkeys. They told me often that the shaking

SAMUEL DE CHAMPLAIN

of the cabin that I saw was caused by the devil and not by the man who was inside, although I observed the contrary; for it was (as I have already said) the Pilotois who seized one of the props of the cabin and made it move so. They also told me that I should see fire come out of the top, which I did not see at all. These rogues also disguise their voices and make them sound big and clear and speak in a language that is unfamiliar to the other savages; and when they make it sound broken the savages believe that it is the devil who speaks, and that he is saying what is to happen in their war, and what they must do. Nevertheless, all these rascals who play soothsayer do not speak two true words out of a hundred and impose upon these poor folk, like plenty of others in the world, in order to get their living from the people. I often admonished them that all that they did was sheer folly, and that they ought not to put faith in it.³

Now, after they have learned from their soothsayers what is to happen to them, they take as many sticks, a foot long, as they

³"This mode of divination was universal among the Algonquin tribes, and is not extinct to this day among their roving Northern bands." Parkman, *Pioneers of New France*, 344.

VOYAGES AND EXPLORATIONS

themselves number, and represent their chiefs by others a little longer. Then they go into the woods and clear a place five or six feet square, where the chief, as field sergeant, arranges all the sticks in the order that seems good to him; then he calls all his companions, who all come armed, and shows them the rank and order that they are to keep when they fight with their enemies. All the savages watch this attentively, noticing the figure which their chief has made with these sticks, and afterward they retire and begin to arrange themselves as they have seen these sticks, and then mingle with one another, and return directly to their order; continuing this two or three times, and doing it at all their encampments, without needing a sergeant to make them keep in their ranks, which they know well how to keep, without getting into confusion. This is the rule that they abide by in their warfare.

We left the next day, continuing our course in the river as far as the entrance to the lake. In this there are many pretty islands, which are low, covered with very beautiful woods and meadows, where there is a quantity of game, and animals for hunting, such as stags, fallow-deer, fawns, roebucks, bears and other animals which come

SAMUEL DE CHAMPLAIN

from the mainland to these islands. We caught a great many of them. There are also many beavers, not only in this river, but in many other little ones which empty into it. These places, although they are pleasant, are not inhabited by any savages, on account of their wars. They withdraw as far as possible from the river into the interior, in order not to be suddenly surprised.

The next day we entered the lake, which is of great extent, perhaps 50 or 60 leagues long.⁴ There I saw four beautiful islands 10, 12 and 15 leagues long,⁵ which formerly had been inhabited by savages, like the River of the Iroquois; but they had been abandoned since they had been at war with one another. There are also several rivers which flow into the lake that are bordered by many fine trees, of the same sorts that we have in France, with a quantity of vines more beautiful than any I had seen in any other place; many chestnut trees, and I have not seen any at all before, except on the shores of the lake, where there is a great abundance of fish of a good many varieties. Among other kinds there is one called by

⁴Lake Champlain is about 90 miles long.

⁵These dimensions are overstated three-fold, S. The islands were Isle la Motte, Long Island, Grand Isle, and Valcour. L.

VOYAGES AND EXPLORATIONS

the savages Chaousarou,⁶ which is of various lengths; but the longest, as these people told me, is eight or ten feet. I saw some of them five feet long, as big as a man's thigh, with a head as large as two fists, a snout two and a half feet long, and a double row of very sharp and dangerous teeth. Its body is, in all respects, like that of the pike, but it is armed with scales so strong that a dagger could not pierce them, and it is silver grey in color. And the end of its snout is like that of a pig. This fish fights all the others in the lakes and rivers, and is wonderfully cunning, to judge from what the people have assured me, which is, that when it wishes to catch certain birds, it goes into the rushes or weeds which border the lake in several places, and puts its snout out of the water without moving at all, so that when the birds come to light on its snout, thinking that it is the trunk of a tree, the fish is so skillful in closing its snout, which had been half open, that it draws the birds under the water by the feet. The savages gave me a head of one of them. They set great store by them, saying that when they have a headache they bleed themselves with the teeth of this

⁶The gar pike, or bony-scaled pike. See the note in *Voyages of Champlain*, II, 216.

SAMUEL DE CHAMPLAIN

fish where the pain is, and it passes off at once.

Continuing our course in this lake on the west side I saw, as I was observing the country, some very high mountains on the east side, with snow on the top of them.⁷ I inquired of the savages if these places were inhabited. They told me that they were—by the Iroquois—and that in these places there were beautiful valleys and open stretches fertile in grain, such as I had eaten in this country, with a great many other fruits; and that the lake went near some mountains, which were perhaps, as it seemed to me, about fifteen leagues from us. I saw on the south others not less high than the first, but they had no snow at all.⁸ The savages told me that it was there that we were to go to find their enemies, and that these mountains were thickly peopled. They also said it was necessary to pass a rapid,⁹ which I saw afterward, and from there to enter another lake, three or four leagues long;¹⁰

⁷The Green Mountains. Mr. Slafter thinks Champlain took outcroppings of white limestone for snow. The Green Mountains would not have snow on them in July, as they are only about 4000 feet high.

⁸The Adirondacks.

⁹The outlet of Lake George.

¹⁰Lake George.

VOYAGES AND EXPLORATIONS

and that when we had reached the end of that it would be necessary to follow a trail for four leagues, and to pass over a river¹¹ which empties on the coast of the Almouchiquois,¹² near the coast of Norumbegue;¹³ and that it was only two days' journey by their canoes, as I have [also] learned since from some prisoners that we took, who described to me very much in detail all that they had found out themselves about the matter through some Algonquin interpreters who knew the Iroquois language.

Now, as we began to approach within two or three days' journey of the home of their enemies, we did not advance more, except at night, and by day we rested. Nevertheless, they did not omit, at any time, the practice of their customary superstitions, to find out how much of their undertakings would succeed, and they often came to me to ask if I had dreamed, and if I had seen their enemies. I answered them "no," and told them to be of good courage and to keep up hope. When night came we pur-

¹¹The Hudson.

¹²The Massachusetts coast.

¹³Adopting Laverdière's emendation founded on the text of the 1613 narrative. The text of the 1632 narrative merely repeats Almouchiquois twice.

SAMUEL DE CHAMPLAIN

sued our journey until daylight, when we withdrew into the thickest part of the woods and passed the rest of the day there. About ten or eleven o'clock, after having taken a little walk around our encampment, I went to rest; and I dreamed that I saw the Iroquois, our enemies, in the lake, near a mountain, drowning within our sight; and when I wished to help them our savage allies told me that we must let them all die, and that they were worthless. When I woke up they did not fail to ask me, as is their custom, if I had dreamed anything. I told them the substance of what I had dreamed. This gave them so much faith that they no longer doubted that good was to befall them.

When evening came we embarked in our canoes to continue on our way; and, as we were going along very quietly, and without making any noise, on the twenty-ninth of the month,¹⁴ we met the Iroquois at ten o'clock at night at the end of a cape that projects into the lake on the west side,¹⁵ and they were coming to war. We both began to make loud cries, each getting his arms ready. We withdrew toward the water and the Iroquois went ashore and ar-

¹⁴July 29, 1609. *more*

¹⁵At Ticonderoga.

VOYAGES AND EXPLORATIONS

ranged their canoes in line, and began to cut down trees with poor axes, which they get in war sometimes, and also with others of stone; and they barricaded themselves very well.

Our men also passed the whole night with their canoes drawn up close together, fastened to poles, so that they might not get scattered, and might fight all together, if there were need of it; we were on the water within arrow range of the side where their barricades were.

When they were armed and in array, they sent two canoes set apart from the others to learn from their enemies if they wanted to fight. They replied that they desired nothing else; but that, at the moment, there was not much light and that they must wait for the daylight to recognize each other, and that as soon as the sun rose they would open the battle. This was accepted by our men; and while we waited, the whole night was passed in dances and songs, as much on one side as on the other, with endless insults, and other talk, such as the little courage they had, their feebleness and inability to make resistance against their arms, and that when day came they should feel it to their ruin. Our men also were not lacking in retort, telling them that they should see such,

SAMUEL DE CHAMPLAIN

power of arms as never before; and much other talk, as is customary in the siege of a city. After plenty of singing, dancing, and parleying with one another, daylight came. My companions and I remained concealed for fear that the enemy should see us, preparing our arms the best that we could, separated, however, each in one of the canoes of the Montagnais savages. After arming ourselves with light armor, each of us took an arquebuse and went ashore. I saw the enemy come out of their barricade, nearly 200 men, strong and robust to look at, coming slowly toward us with a dignity and assurance that pleased me very much. At their head there were three chiefs. Our men also went forth in the same order, and they told me that those who wore three large plumes were the chiefs; and that there were only three of them; and that they were recognizable by these plumes, which were a great deal larger than those of their companions; and that I should do all I could to kill them. I promised them to do all in my power, and said that I was very sorry that they could not understand me well, so that I might give order and system to their attack of the enemy, in which case we should undoubtedly destroy them all; but that this could not be remedied; that I was very glad

VOYAGES AND EXPLORATIONS

to encourage them and to show them the good-will that I felt, when we should engage in battle.

As soon as we were ashore they began to run about 200 paces toward their enemy, who were standing firmly and had not yet noticed my companions, who went into the woods with some savages. Our men began to call me with loud cries; and, to give me a passageway, they divided into two parts and put me at their head, where I marched about twenty paces in front of them until I was thirty paces from the enemy. They at once saw me and halted, looking at me, and I at them. When I saw them making a move to shoot at us, I rested my arquebuse against my cheek and aimed directly at one of the three chiefs. With the same shot two of them fell to the ground, and one of their companions, who was wounded and afterward died. I put four balls into my arquebuse. When our men saw this shot so favorable for them, they began to make cries so loud that one could not have heard it thunder. Meanwhile the arrows did not fail to fly from both sides. The Iroquois were much astonished that two men had been so quickly killed, although they were provided with armor woven from cotton thread and from wood, proof against their

SAMUEL DE CHAMPLAIN

arrows. This alarmed them greatly. As I was loading again, one of my companions fired a shot from the woods, which astonished them again to such a degree that, seeing their chiefs dead, they lost courage, took to flight and abandoned the field and their fort, fleeing into the depths of the woods. Pursuing them thither I killed some more of them. Our savages also killed several of them and took ten or twelve of them prisoners. The rest escaped with the wounded. There were fifteen or sixteen of our men wounded by arrow shots, who were soon healed.

[After we had gained the victory they amused themselves by taking a great quantity of Indian corn and meal from their enemies, and also their arms, which they had left in order to run better. And having made good cheer, danced and sung, we returned three hours afterward with the prisoners.]

This place, where this charge was made, is in latitude 43 degrees and some minutes, and I named the lake Lake Champlain.

VOYAGES AND EXPLORATIONS

CHAPTER X

Return from the battle, and what happened on the way.

AFTER going eight leagues, toward evening they took one of the prisoners and harangued him about the cruelties that he and his people had inflicted on them, without having any consideration for them; and said that similarly he ought to make up his mind to receive as much. They commanded him to sing, if he had any courage; which he did, but it was a song very sad to hear.

Meanwhile our men lighted a fire, and when it was blazing well, each one took a brand and burned this poor wretch little by little, to make him suffer greater torment. Sometimes they stopped and threw water on his back. Then they tore out his nails and put the fire on the ends of his fingers and on his privy member. Afterward they flayed the top of his head and dripped on top of it a kind of gum all hot; then they pierced his arms near the wrists, and with sticks pulled the sinews, and tore them out by force; and when they saw that they could not get them, they cut them. This poor

SAMUEL DE CHAMPLAIN

wretch uttered strange cries, and I pitied him when I saw him treated in this way; and yet he showed such endurance that one would have said that, at times, he did not feel any pain.

They strongly urged me to take some fire and do as they were doing, but I explained to them that we did not use such cruelties at all, and that we killed them at once, and that if they wished me to fire a musket shot at him I would do it gladly. They said "no," and that he would not feel any pain. I went away from them, distressed to see so much cruelty as they were practising upon this body. When they saw that I was not pleased at it, they called me and told me to fire a musket shot at him; which I did without his seeing it at all. After he was dead they were not satisfied, for they opened his belly and threw his entrails into the lake; then they cut off his head, his arms, and his legs, which they scattered in different directions, and kept the scalp, which they had skinned off, as they had done with all the others that they had killed in the battle.

They committed also another wickedness, which was to take the heart which they cut into several pieces and gave^{to} a brother of his and others of his companions, who were prisoners, to eat. They put it into their

VOYAGES AND EXPLORATIONS

mouths, but would not swallow it. Some Algonquin savages, who were guarding them, made some of them spit it out and threw it into the water. This is how these people treat those whom they capture in war; and it would be better for them to die in fighting, or to kill themselves on the spur of the moment, as there are many who do, rather than fall into the hands of their enemies. After this execution we resumed our march to return with the rest of the prisoners, who always went along singing, without any hope of being better treated than the other. When we arrived at the rapids of the River of the Iroquois,¹ the Algonquins returned to their country, and also the Ochateguins² with some of the prisoners. They were well pleased with what had taken place in the war, and that I had gone with them readily. So we separated with great protestations of friendship, and they asked me if I did not wish to go into their country to aid them always as a brother. I promised that I would do so, and I returned with the Montagnais.

After informing myself, through the prisoners, about their country, and about how large it might be,³ we packed up the bag-

¹The Richelieu.

²Hurons.

SAMUEL DE CHAMPLAIN

gage to return; which we did with such speed that every day we made 25 or 30 leagues in their canoes, which is the ordinary rate.³ When we were at the mouth of the River Iroquois, there were some of the savages who dreamed that their enemies were pursuing them. This dream at once led them to move the camp, although the night was very bad on account of winds and rain; and they went to pass the night among some high reeds, which are in Lake St. Peter, until the next day. Two days afterward we reached our settlement, where I had them given bread, peas and beads, which they asked me for to ornament the heads⁴ of their enemies, in order to make

³This is an overstatement, unless it means with a rapid current.

⁴Here, apparently in the sense of scalps. Champlain uses "teste," "head," where we should expect "chevelure," which was used for "scalp" by the later writers.

It is possible that he used the word (or form) "test" which is recorded in Cotgrave's *French and English Dictionary*, 1673, as meaning "the scalp or skull of the head," and that the printer set it up "teste." In Robert Sherwood's *Dictionary English and French*, 1672, the definition of the hairy scalp is: "Perecraine; tais, test, tests." In James Howell's *Lexicon Tetraglotton: An English-French-Italian-Spanish Dictionary*, London, 1660, the definition is the same, except that the second word is spelled "teste." There would be

VOYAGES AND EXPLORATIONS

merry on their arrival. The next day I went with them in their canoes to Tadousac, to see their ceremonies. As they approached the shore each one took a stick with the heads of their enemies hung on the ends, with these beads on them, singing one and all. When they were near the shore the women undressed entirely naked and threw themselves into the water, going in front of the canoes, to take the heads to hang afterward to their necks, like a precious chain. Some days afterward they made me a present of one of these heads and of two sets of their enemies' weapons, to preserve, in order to show them to the King; which I promised to do, to give them pleasure.

no need of discussing this point except for the fact that Champlain's words might be taken as evidence that the Canadian Indians beheaded their captives, as was true of the New England Indians.

On this question see "*The Scalp Trophy*," by Francis C. Clark, *The Magazine of History*, January, 1906, 29-39, and February, 1906, 105-114. That the Canadian Indians practiced scalping in Cartier's time (1535) is proved by his remark, "et nous fut par ledict Donnacona monstré les peaulx de cinq testes d'homme estandus sur du boys cōme paulx de p̃chermin" (*Bref Recit.*, Tross ed., 29), and by Champlain's remark, p. 215, above. His other references to scalping will be found below, p. 225; vol. II, pp. 2, 31, 160.

SAMUEL DE CHAMPLAIN

CHAPTER XI

Defeat of the Iroquois near the mouth of this River Iroquois.

IN the year 1610,¹ when I had gone with a bark and some men from Quebec to the mouth of the River Iroquois, to wait for 400 savages, who were to join me, so that I might aid them in another war, which turned out to be more imminent than we thought, an Algonquin savage in a canoe came swiftly to warn me that the Algonquins had encountered the Iroquois, who numbered one hundred, and that they were well barricaded, and that it would be hard

¹Champlain returned to France in the fall of 1609, setting out from Tadoussac Sept. 5 and arriving at Honfleur Oct. 13. He had interviews with De Monts and with the King, Henry IV, and set out on his return from Honfleur March 7. He arrived at Tadoussac April 26. Two days later he started for Quebec. A war party of Montagnais soon appeared at Quebec and reminded Champlain of his promises of the previous year. He kept his word, starting June 14, and in this narrative takes up the thread at his arrival at the mouth of the Richelieu. See *Voyages of Champlain*, II, 227-238; Laverdière, *Voyages*, 1613, 200-212.

VOYAGES AND EXPLORATIONS

to get the upper hand of them if the Misthi-gosches (as they call us) did not come promptly.

At once the alarm began among some of the savages, and each one jumped into his canoe with his arms. They were promptly ready, but in confusion; for they hurried so, that, instead of advancing, they delayed themselves. They came to our bark, begging me to go with them in their canoes, and my companions also, and urged me so hard that I embarked in one with four others. I asked La Route, who was our pilot, to stay in the bark and send me four or five more of my companions.

When we had gone about half a league across the river, all the savages went ashore and, abandoning their canoes, took their shields, bows, arrows, clubs and swords, which they fasten to the end of big sticks, and began to run into the woods in such a way that we soon lost them from view, and they left us five without a guide. Nevertheless, we kept following them and went about half a league into the thick woods, into fens and marshes, always with water to our knees, each armed with the corselet of a pikeman, which was very burdensome. Besides, there were quantities of mosquitoes so thick that they scarcely allowed us to

SAMUEL DE CHAMPLAIN

catch our breath at all ; they persecuted us so much and so cruelly that it was a strange experience. Nor did we know where we were until we noticed two savages crossing the woods. We called them, and told them that they must stay with us to guide us and conduct us to where the Iroquois were, and that otherwise we could not go there, and we should lose our way. This they did. After going a little way, we noticed a savage coming swiftly to look for us, to have us advance as quickly as possible. He gave me to understand that the Algonquins and the Montagnais had tried to force the barricade, and that they had been repulsed and the best men of the Montagnais had been killed and several others wounded. They had withdrawn to wait for us, and their hope was altogether in us. We had not gone more than an eighth of a league with this savage, who was the captain of the Algonquins, when we heard the yells and cries of both, calling one another names, and at the same time skirmishing lightly while they waited for us. As soon as the savages saw us, they began to shout in such a way that one would not have heard it thunder. I ordered my companions to follow me all the time, and not to separate from me at all. I went near to the barricade of the enemy to

VOYAGES AND EXPLORATIONS

explore it. It was made of heavy trees set close together in a circle, which is the usual shape of their fortresses. All the Montagnais and Algonquins also approached this barricade. Then we began to discharge a great many musket shots through the foliage, since we could not see them as they could us. I was wounded as I was shooting the first time into the side of their barricade, by an arrow shot which slit the end of my ear and entered my neck. I took hold of it and pulled it out; it was barbed on the end with a very sharp stone. Another of my companions was wounded at the same time in the arm by another arrow, which I pulled out for him. Nevertheless, my wound did not prevent me from doing my duty, nor our savages from doing their part; and likewise the enemy, to such a degree that the arrows were seen flying from one side and the other as thick as hail. The Iroquois were astonished at the noise of our muskets, and especially at the fact that the balls pierced better than their arrows; and they were so frightened at the effect of them, when they saw several of their companions fall dead and wounded, that, on account of their fear, thinking these shots could not be cured, they threw themselves on the ground when they heard the noise;

SAMUEL DE CHAMPLAIN

and we hardly missed a shot and fired two or three balls at a time, and most of the time we had our muskets resting on the edge of their barricade. When I saw that our ammunition was beginning to fail, I said to all the savages that they must overcome them by force and break their barricade; and to do this they must take their shields and cover themselves with them, and thus get so near that ropes could be tied to the posts which held them up, and then, by main strength, they could pull hard enough to throw them over, and by this means make a big enough opening to get into their fort; and that, meanwhile, we would keep back the enemy by musket shots when they came out to stop our men; and also that a certain number should go behind some big trees that were near this barricade, in order to throw them over on them to crush them; that others should protect them with their shields, to prevent the enemy from injuring them, which they did promptly. And as they were about to accomplish it, the bark, which was a league and a half from us, heard us fighting, through the echo of our muskets, which resounded as far off as they were; this led a young man from St. Malo, full of courage, called Des Prairies, who had his bark near us to trade in skins, to say

VOYAGES AND EXPLORATIONS

to all those who were there that it was a great shame for them to see me fighting in this way with the savages, without coming to my aid, and that, for his part, he had too much regard for his honor, and did not wish any one to be able to reproach him in this way, and thereupon he decided to come to me in a shallop with some of his companions, and of mine, whom he took with him. As soon as he arrived he went toward the fort of the Iroquois, which was on the bank of the river. There he went ashore and came to find me. When I saw him I ordered the savages who were breaking down the fortress, to stop, so that the newcomers might have their part of the pleasure. I begged *Sieur des Prairies* and his companions to fire some salutes of the musket before our savages should take the enemy by storm, as they had decided to do; this they did, and they shot several times, each one doing his duty. When they had shot enough I addressed our savages and incited them to complete the work. Immediately approaching the barricade, as they had done before, with us on their flank, to shoot at any who should try to hinder the destruction, they bore themselves so well and so valorously that, with the help of our muskets, they made an opening in it, though it

SAMUEL DE CHAMPLAIN

was one hard to get through, since it was the height of a man from the ground and there were the branches of the trees that had been felled, which were very troublesome. However, when I saw a sufficiently practicable entrance, I gave orders not to fire any more, which were obeyed. At the same moment twenty or thirty, not only of savages, but our men, went in, sword in hand, scarcely meeting any resistance. At once all who were sound began to flee, but they did not go far, for they were cut down by those who were around the barricade, and those who escaped were drowned in the river. We took fifteen prisoners and the rest were killed by musket shots, by arrows and by swords. When this was done there came another shallop with some of our companions in it, who were too late, although in time enough to strip the booty. This did not amount to much, for there was nothing but robes of beaver on dead bodies covered with blood, which the savages would not take the trouble to plunder, and they laughed at those who did it, namely, those in the last shallop. Having gained the victory by the grace of God, they gave us much praise.

These savages scalped the heads of their dead enemies, as they are accustomed to do,

VOYAGES AND EXPLORATIONS

as a trophy of their victory, and took them away. They returned with fifty of their own men wounded, and three of the Montagnais and Algonquins dead, singing, their prisoners with them. They hung these heads² on sticks in front of their canoes, and a dead body cut into quarters, to eat in revenge,³ as they said; and they came in this way to where our barks were, near the mouth of the River of the Iroquois.

My companions and I set sail in a shallop, where I had my wound dressed. I asked the savages for an Iroquois prisoner, whom they gave me. I saved him from a good many tortures that he would have suffered, such as they inflicted upon his companions, whose nails they tore out, whose fingers they cut off, and whom they burned in many places. That day they killed three of them in this way. They took others to the edge of the water and fastened them all erect to a stake; then each one came with a torch of birch bark and burned him now in one place, now in another; and these poor wretches, when they felt the fire, shrieked so loud that it was a strange thing to hear

²Here, meaning scalps.

³See Parkman's note, *Pioneers of New France*, 359, on ceremonial or superstitious cannibalism among the Indians.

SAMUEL DE CHAMPLAIN

them. After making them suffer in this way, they took some water and threw it over their bodies, to make them suffer more; then they applied the fire again in such a way that the skin fell from their bodies, and they continued to cry out loudly and to exclaim, dancing until these poor unfortunates fell dead on the spot.

As soon as a body fell to the ground they beat it with heavy blows of a stick, then cut off the arms and legs and other parts of it, and he was not regarded as a man of importance among them who did not cut off a piece of the flesh and give it to the dogs. Nevertheless, all these tortures were endured with such firmness that those who look on are astonished.

As for the other prisoners who remained, whether to the Algonquins or the Montagnais, they were kept to be killed by the hands of their wives and daughters, who in this do not show themselves any less inhuman than the men, and they even surpass them in cruelty; for, by their cunning, they invent more cruel tortures and take pleasure in making them end their lives thus.

The next day Captain Iroquet arrived, and another Ochateguin, who had eighty

VOYAGES AND EXPLORATIONS

men with him, and they were very sorry not to have been at the defeat. Among all these nations there were very nearly two hundred men who never had seen Christians before, and they wondered at them greatly.

We were together three days at an island of the River of the Iroquois; then each nation returned to his own country. I had a young fellow⁴ who had passed two winters at Quebec, who had a wish to go with the Algonquins to learn their language, get acquainted with the country, see the great lake, observe the rivers, and what people inhabited it; also to explore the mines and the rarer things of this place, so that, on his return, he could give us information about all these things. I asked him if he was agreeable to it, for it was not my wish to force him to it. I went to find Captain Iroquet, who was very affectionate to me, and asked him if he wished to take this young fellow with him into his country, to pass the winter, and bring him back in the spring. He promised me to do it, and treat him like his son. He told it to the Algon-

⁴Apparently Etienne Brulé. Laverdière, *Voyages*, 1632, part I, 178. For Brulé's later history see C. W. Butterfield, *Stephen Brulé*, Cleveland, 1898.

SAMUEL DE CHAMPLAIN

quins, who were not too pleased, for fear some accident should befall him.

When I had shown them how much I wished it, they said to me that since I had that wish that they would take him and treat him like a child of their own. They obliged me also to take a young man in his place to carry to France, in order to report to them what he should see. I accepted the proposition gladly, and was very much pleased with it. He was of the tribe of the Ochateguins called Hurons. This gave them the more reason for treating my boy well, whom I provided with what he needed; and we promised one another to meet again at the end of June.

Some days afterward this Iroquois prisoner, whom I had under guard, on account of the excess of liberty that I allowed him, got away and escaped, because of the fear and terror that he felt, in spite of the assurances given him by a woman of his tribe, whom we had at our settlement.

VOYAGES AND EXPLORATIONS

CHAPTER XII

Description of whaling in New France.

IT¹ has seemed to me not inappropriate to give here a short description of whale fishing, which many people have not seen and believe to be done by cannon shots, since there are bold liars who affirm as much to those who know nothing of it. Many have obstinately maintained it to me, on account of these false reports.

Those, then, who are most skillful in this fishery are the Basques,² who, for the purpose, put their ships in a safe harbor, near where they think there are a good many whales, and fit out shallops manned by good men and provided with lines, which are small ropes made of the best hemp that can be found, at least 150 fathoms long; and

¹Champlain here omits the details of his return to Quebec and of his leaving there Aug. 8 and Tadoussac Aug. 13 for France. He takes up the thread with this description of whaling. Cf. *Voyages of Champlain*, II, 249-252.

²The hardy sailors of the Basque provinces in Spain had been engaged in fishing and whaling off Newfoundland since the time of the Cabot voyages.

SAMUEL DE CHAMPLAIN

they have a great many partisans as long as a short pike, with the iron six inches wide. Others are a foot and a half wide and two feet long, very sharp. They have in each shallop a harpooner, who is the most agile and adroit man among them and draws the biggest wages next to the masters, inasmuch as his is the most dangerous position. As soon as this shallop is out of port, they look in every direction, tacking from one side to the other, to see if they can see and discover a whale. If they do not see anything, they go ashore and climb the highest point that they can find, to get a farther view. There they leave a man on the watch. He descries the whale, which is discovered both by its size and by the water that it spurts from its blow-holes, more than a hogshhead at a time and to the height of two lances; and by the amount of water that it spurts they judge how much oil it can yield. There are some from which they draw as much as 120 barrels; from others it is less.

Upon seeing this tremendous fish they embark promptly in their shallops and, by means of oars or the wind, proceed until they are above him. Seeing him under water, the harpooner at once goes to the prow of the shallop and with a harpoon, which

VOYAGES AND EXPLORATIONS

is an iron two feet long and half a foot wide at the barbs, attached to a stick as long as a short pike, having in the middle a hole to which the line is fastened; and as soon as the harpooner sees his opportunity he throws his harpoon at the whale and strikes him well in the front, and, at once, when he feels the wound, he goes to the bottom. And if by chance, in turning, he strikes sometimes the shallop with his tail, or the men, he breaks them like glass. This is all the risk of being killed that they run in harpooning. But as soon as they have thrown the harpoon into him they pay out their line until the whale is at the bottom; and, sometimes, as they do not go down straight, they drag the shallop more than eight or nine leagues, going as fast as a horse; and they are obliged more often than not to cut their line, lest the whale drag them under water. When it goes straight to the bottom it stays there only a little while and then returns very quietly to the surface; and as fast as it rises they take in the line gently, and then, when he is at the top, two or three shallows get around him with partisans, with which they give him several blows; and when he feels the blows he sounds again immediately, shedding blood and growing so weak that he has

SAMUEL DE CHAMPLAIN

no strength nor vitality any more; and when he rises again they succeed in killing him. When he is dead he does not go to the bottom again; and then they tie him with stout ropes and drag him ashore to the place where they do their trying out; that is, where they have the fat of this whale melted, to extract the oil from it.

This is the way in which they are caught, and not by cannon shots, as many think, as I have already said.

CHAPTER XIII

Departure of the author from Quebec. Mont Royal and its cliffs. Islands where potter's clay is found. Island of Ste. Hélène.

In the year 1611¹ I took back my savage to those of his tribe, who were to come to Sault St. Louis,² intending to get my

¹Champlain arrived at Honfleur on his return Sept. 27, 1610. On March 1, 1611, he set sail from Honfleur on his return to New France. He here omits all details of the voyage, in particular the experiences with icebergs, told at some length in the earlier narrative. He reached Quebec May 21, on his way to the Sault St. Louis. Cf. *Voyages of Champlain*, III, 1-9.

²The Lachine Rapids.

VOYAGES AND EXPLORATIONS

servant whom they had as a hostage. I left Quebec May 20 [21] and arrived at these great rapids on the 28th, where I did not find any savages, who had promised me to be there on the 20th of the month. I immediately went in a poor canoe with the savage that I had taken to France and one of our men. After having looked on all sides, not only in the woods, but also along the river bank, to find a suitable place for the site of a settlement, and to prepare a place in which to build, I went eight leagues by land, along the rapids through the woods, which are rather open, and as far as a lake,³ where our savage took me. There I contemplated the country very much in detail. But in all that I saw I did not find any place at all more suitable than a little spot which is just where the barks and shallops can come easily, either with a strong wind or by a winding course, because of the strength of the current. Above this place (which we named La Place Royale), a league from Mont Royal, there are a great many little rocks and shoals, which are very dangerous. And near this Place Royale there is a little river running back a good way into the interior, all along which there are more than sixty acres of cleared land,

³The Lake of Two Mountains. L.

SAMUEL DE CHAMPLAIN

like meadows,⁴ where one might sow grain and make gardens. Formerly savages tilled there, but they abandoned them, on account of the usual wars that they had there. There are also a great number of other beautiful meadows, to support as many cattle as one wishes, and all the kinds of trees that we have in our forests at home, with a great many vines, walnuts,⁵ plum trees, cherries, strawberries and other kinds which are very good to eat. Among others there is one very excellent, which has a sweet taste, resembling that of plantains (which is a fruit of the Indies), and is as white as snow, with a leaf like that of the nettle, and running on trees or the ground, like ivy. Fishing is very good there, and there are all the kinds that we have in France, and a great many others that we do not have, which are very good; as is also game of different

⁴The place selected by Champlain is now called Pointe à Callières. "It is the centre of the present city of Montreal. The Custom House now stands upon the site he chose, and the Montreal ocean steamships discharge their cargoes there. A little river, now covered in and used for drainage, fell in at that point, and on its banks were the clearings cultivated by the Hochelagans of Cartier before the great war drove them westwards." S. E. Dawson, *The St. Lawrence*, 262.

⁵Here, *noyers* probably describes butternuts.

VOYAGES AND EXPLORATIONS

kinds; and hunting is good: stags, hinds, does, caribous, rabbits, lynxes, bears, beavers and other little animals which so abound that while we were at these rapids we never were without them.

After having made a careful exploration, then, and found this place one of the most beautiful on this river, I at once had the woods cut down and cleared from this Place Royale, to make it level and ready for building. Water can easily be made to flow around it, making a little island of it, and a settlement can be made there as one may wish.

There is a little island twenty fathoms from this Place Royale, which is about 100 paces long, where one could put up a good, well-defended set of buildings. There are also a great many meadows containing very good potter's clay, whether for bricks or to build with, which is a great convenience. I had some of it worked up, and made a wall of it four feet thick and from three to four feet high and ten fathoms long, to see how it would last through the winter when the floods came down, which, in my opinion, would not rise to this wall, although the land is about twelve feet above that river, which is quite high. In the middle of the river there is an island about three-quarters

SAMUEL DE CHAMPLAIN

of a league in circumference, where a good and strong town could be built, and I named it Isle de Ste. Hélène.⁶ These rapids descend into a sort of lake, where there are two or three islands and some beautiful meadows.

While waiting for the savages I had two gardens made: one in the meadows and the other in the woods which I had cleared; and the second day of June⁷ I sowed some seeds in them, which came up in perfect condition, and in a little while, which showed the goodness of the soil.

I resolved to send Savignon, our savage, with another, to meet those of his country, in order to make them come quickly; and they hesitated to go in our canoe, which they distrusted, for it was not good for much.

On the seventh⁸ I went to explore a little river,⁹ by which sometimes the savages go to war, which leads to the rapids of the

⁶Laverdière suggests that this name occurred to Champlain from his recent marriage with Hélène Boullé, the daughter of Nicolas Boullé, secretary of the King's Chamber. *Voyages*, 1613, 245.

⁷1611.

⁸Of June.

⁹The River St. Lambert.

VOYAGES AND EXPLORATIONS

river of the Iroquois.¹⁰ It is very pleasant, with meadows on it more than three leagues in circumference, and a great deal of land which could be tilled. It is one league from the great rapids¹¹ and a league and a half from Place Royale.

On the ninth our savage arrived. He had been a little way beyond the lake,¹² which is about ten leagues long, that I have seen before. He did not meet anything there, and could not go any farther, because their canoe gave out and they were obliged to return. They reported to us that above the rapids they saw an island where there were so many herons that the air was filled with them. There was a young man called Louis, who was a great lover of hunting, who when he heard that, wanted to go there to satisfy his curiosity, and earnestly begged our savage to take him there. This the savage consented to do, with a Montagnais chief, a very fine fellow, called Outetoucos. In the morning this Louis went to call the two savages, to go to this island of herons.

¹⁰The Richelieu. The route was up the St. Lambert, then down the Montreal into Chambly Basin, then up the Richelieu. L.

¹¹The Sault St. Louis, familiar to the modern tourist as the Lachine Rapids.

¹²The Lake of the Two Mountains.

SAMUEL DE CHAMPLAIN

They embarked in a canoe and went there. This island is in the middle of the rapids. There they took as many herons and other birds as they wished and re-embarked in their canoe. Outetoucos, against the wishes of the other savage, and such pressure as he could bring to bear, wished to pass through a place that was very dangerous, where the water falls nearly three feet, saying that formerly he had gone that way, which was false. He was a long time arguing with our savage, who wished to take him on the south side, along the mainland, where they had been oftenest accustomed to pass. Outetoucos did not want to do this, saying that there was no danger at all. When our savage saw that he was obstinate he yielded to his wish; but he told him that at least they must empty out some of the birds that were in the canoe, for it was too heavily loaded, or they would certainly fill with water and be lost. This he refused to do, saying that it would be time enough when they saw that there was danger for them. So they let themselves go in the current. When they reached the main fall of the rapids, they wished to get out of it and throw over their load; but there was no longer time, for the swiftness of the water overmastered them and they were im-

VOYAGES AND EXPLORATIONS

mediately engulfed in the whirlpools of the rapids, which turned them around a thousand times, up and down, and did not release them for a long time. At last the violence of the water tired them out so much that this poor Louis, who did not know anything about swimming, lost his head, and as the canoe was under water he had to let go of it. When it came to the surface again the two others, who kept holding on to it, did not see our Louis any more, and so he died miserably.

When they had got beyond this fall, Outetoucos, being naked and having confidence in his power to swim, abandoned the canoe to get to the land, but as the water there was very swift he was drowned. For he was so tired out and overcome by the labor that he had had that it was impossible for him to save himself.

Our savage, Savignon, being more cautious, kept holding to the canoe firmly until it was in an eddy whither the current had carried it; and knew so well how to act, in spite of the effort and fatigue that he had undergone, that he came very quietly to land, where he threw the water out of the canoe. He returned in great fear that vengeance would be taken upon him, as they do toward one another; and

SAMUEL DE CHAMPLAIN

he told us this story, which caused us sorrow.

The next day I went in another canoe to these rapids with this savage and another of our men, to see the place where they were lost, and also to try to recover their bodies. I assure you that when he showed me the spot my hair stood on end, and I was astonished that the dead men had been so rash and so lacking in sense as to pass through so terrible a place when they could go elsewhere; for it was impossible to pass there, for there are seven or eight falls where the water goes down as by steps, the lowest three feet high, and there is an extraordinary seething and boiling. A part of these rapids was all white with foam, and the noise was so great when the air resounded with the roar of the cataracts that it sounded like thunder. After having seen this place, and examined it in detail, we searched along the river for these bodies, while a rather light shallop was going on the other side, and we returned without finding them.

CHAPTER XIV.

Two hundred savages return the Frenchman who had been entrusted to them, and take back the savage who had returned from France. Various remarks by the author.

ON the 13th of this month¹ two hundred Huron savages, with the chiefs, Ochateguin, Iroquet, and Tregouaroti, brother of our savage, brought back my lad. We were very glad to see them, and I went to meet them with a canoe and our savage. Meantime, they advanced quietly in order, our men preparing to give them a salvo with the arquebuses and some small pieces. As they were approaching they began to shout all together, and one of the chiefs commanded their address to be made, in which they praised us highly, calling us truthful, in that I had kept my word to them, to come to find them at these rapids. After they had given three more shouts, a volley of musketry was fired twice, which astonished them so much that they asked me to tell them that there should not be any shooting, saying that the greater number of them

¹June 13, 1611.

SAMUEL DE CHAMPLAIN

never had seen Christians before, nor heard thunderings of that sort, and that they were afraid of its doing them harm. They were very much pleased to see our savage well, for they had supposed him dead, on account of reports which some Algonquins had made to them, who had heard it from the Montagnais savages. The savage warmly praised the good treatment that I had given him in France, and the curious things that he had seen there, at which he made them all wonder; and they went away quietly enough to their cabins in the woods, to wait for the morning, when I should show them the place where I wished them to encamp. I also saw my lad, who was dressed like a savage, and he also praised the treatment of the savages, according to the customs of their country; and explained to me all that he had seen in the winter, and what he had learned from them.

When the next day came I showed them a place for their cabins, with regard to which the elders and leading men consulted by themselves. And, after spending a long time doing this, they had me called alone with my servant, who had learned their language very well, and they told him that they desired to form a close friendship with me, in view of the courtesy that I had

VOYAGES AND EXPLORATIONS

shown them in the past; and they again praised the treatment that I had shown to our savage as if he were a brother, and said that that put them under obligations to wish me so much good that all that I desired of them they would try to provide me with. After a good deal of discourse they made me a present of one hundred beavers. I gave them in exchange some other kinds of merchandise; and they told me that there were more than four hundred savages who were to come from their country, and that what had detained them was an Iroquois prisoner who belonged to me, who had escaped and had returned to his country. He had given them to understand that I had given him his liberty and some merchandise, and that I was coming to the rapids with six hundred Iroquois to wait for the Algonquins and kill them all. The fear occasioned by this news had stopped them, and that but for that they would have come. I told them that the prisoner had stolen away without leave, and that our savage knew well in what way he had gone, and that there had been no thought of giving up their friendship, as they had been told, since we had gone to the war in company with them, and had sent my lad into their country to accept their friendship; and that

SAMUEL DE CHAMPLAIN

this promise that I had kept so faithfully to them confirmed this fact still more. They replied that, as far as they were concerned, they never had thought it so, and that they understood well that all this talk was far from the truth; and that if they had thought otherwise they would not have come; and that it was the others who were afraid, as a consequence of never having seen a Frenchman, except my youth. They also told me that three hundred Algonquins were coming in five or six days, if we wished to wait for them, to go to war with them against the Iroquois, and that if I did not go they would return without doing it. I talked with them a great deal about the source of the great river,² and about their country, concerning which they discoursed in detail, not only with regard to the rivers, falls, lakes and lands, but also the peoples who inhabit it, and what is found there. Four of them assured me that they had seen a sea very remote from their country, and that the path thither was very difficult, not only because of the wars, but also because of the wilderness that it is necessary to cross in order to reach it. They also told me that the preceding winter some savages came from the region of Florida, beyond

²The St. Lawrence.

VOYAGES AND EXPLORATIONS

the country of the Iroquois, who lived in sight of our ocean sea and were on friendly terms with these savages. In fine, they gave me very exact descriptions, showing me by signs all the places where they had been, taking pleasure in recounting all these things to me; and I did not get tired of listening to them, in order to find out from them matters about which I had been uncertain. When all this talk was over I told them that they should trade off the few commodities that they had; which they did.

The next day, after having traded off all that they had, which was little, they made a barricade around their dwelling on the side where the woods were, and said that it was for their safety, in order to avoid being surprised by the enemy; which we took for gospel truth.³ When night came, they called our savage, who was sleeping on my despatch boat, and my servant, and they went to them. After having talked some time they had me called, too, about midnight. When I came to their cabin I found them all seated in council, and they

³Champlain explains, in his narrative of 1613, that he discovered later that these Indians were suspicious of the other Frenchmen and feared they would be attacked. *Voyages of Champlain*, II, 23 and 26.

SAMUEL DE CHAMPLAIN

made me sit near them, saying that it was their custom when they wished to make a proposition to assemble at night, in order not to be diverted by looking at things, and that the daylight diverted the mind by things; but, in my opinion, they wished to tell me their wishes in secret, having confidence in me, as they have since given me to understand, telling me that they wanted very much to see me alone; that some of them had been beaten; that they were as well disposed toward me as toward their children, and had so much confidence in me that they would do what I said, but that they were very distrustful of other savages;⁴ that if I should return I might take as many of their people as I wished, provided that they were under the leadership of a chief; and that they sent for me to assure me further of their friendship, which never should be broken, and to beg that I should not be ill-disposed toward them; that knowing that I had made up my mind to see their country, they would show it to

⁴For *des autres sauvages*, the reading, to judge from the more detailed account in the narrative of 1613, should be either *des autres*, i. e., the other Frenchmen, or *des autres pataches*, the other boats, i. e., those belonging to the independent French traders who had followed after Champlain. Cf. Laverdière, *Voyages*, 1613, 251, 257.

VOYAGES AND EXPLORATIONS

me at the risk of their lives, aiding me with a goodly number of men who could go anywhere; and that in the future we should expect the same from them that they did from us. They at once sent for fifty beavers and four of their shell necklaces⁵ (which they value as we do chains of gold). These presents, they said, were from the other captains, who never had seen me, and that they had sent them to me, and that they desired to be my friends always, but that if there were any Frenchmen who wished to go with them they should be very glad, and that they wished more than ever to maintain a firm friendship.

After much talk I proposed to them that, since they were willing to show me their country, I would ask His Majesty to aid us with forty or fifty men equipped with what was necessary for this journey, and that I would embark with them, provided that they supply us with what provisions we should need during this journey; that I would take something to them to make presents with to the chiefs of the country through which we should go, and that we should return to pass the winter in our settlement; that if I should find the country to be good and fertile, several settlements

⁵Necklaces of wampum.

SAMUEL DE CHAMPLAIN

would be made there, and that by this means we should have communication with one another, living happily in the future in the fear of God, whom they would be taught to know.

They were much pleased with this proposition, and asked me to shake hands on it, saying that they, on their part, would do all that they could to carry it out; and that as for provisions we should not lack for them any more than they themselves; and they assured me once more that I should be shown what I wished to see. Upon that I took my leave of them at daybreak, thanking them for their willingness to favor my desire, and begging them always to continue to feel so.

The next day, the 17th of that month,⁶ they decided to return and to take with them Savignon, to whom I gave some trinkets. He gave me to understand that he was going to lead a hard life in comparison with that which he had had in France. So he went off with great regret, and I was very glad to be relieved of him. Two captains told me that in the morning of the next day they would send to fetch me; which they did. I and my servant embarked with those who came. When we came to

⁶June 17, 1611.

VOYAGES AND EXPLORATIONS

the rapids we went some leagues into the woods, where they were encamped on the lake, where I had been before. When they saw me they were very much pleased and began to shout, according to their custom, and our savage came to me to ask me to go into his brother's cabin, where he at once had meat and fish put over the fire to give me a feast.

While I was there a feast was held, to which all the leaders and I also were invited. And although I had already had a good meal, nevertheless, in order not to offend against the custom of the country, I went to it. After banqueting they went into the woods to hold their council, and, meanwhile, I amused myself in looking at the landscape, which is very pretty. Some time afterward they sent for me, to tell me what they had resolved upon among themselves. I went to them with my servant. When I had seated myself near them they told me that they were glad to see me, and that I had not failed to keep my word as to what I had promised them; and that they realized my kind intentions more and more, which were to keep up my friendship further; and that before going away they wished to take leave of me; and that it would have been very disappointing for

SAMUEL DE CHAMPLAIN

them if they had gone without seeing me again; and that they thought that, in that case, I should have been ill-disposed toward them. They begged me again to give them a man. I told them that if there was one among us who desired to go with them, I should be very glad of it.

After having made me understand their good-will for the last time, and I mine toward them, the case of a savage came up, who had been a prisoner of the Iroquois three times and had escaped very fortunately, and was resolved to go, with nine others, to avenge the cruelties that his enemies had made him suffer. All the captains begged me to dissuade him if I could, inasmuch as he was very brave, and they feared that if he should advance so far into the enemy with so small a force he never would return. I did so, to please them, by all the reasons that I could urge, which were of little effect upon him, as he showed me some of his fingers cut off and great cuts and burns on his body; and he said that it was impossible for him to live without killing his enemies and having his revenge; and that his heart told him that he must depart as soon as he could; which he did.

When I had finished with them I begged

VOYAGES AND EXPLORATIONS

them to take me back in our despatch boat. To do this they prepared eight canoes to run the rapids, and stripped themselves naked, and made me take off everything but my shirt; for often it happens that some are lost in shooting the rapids; therefore, they keep close to one another, to aid one another promptly if a canoe should happen to capsize. They said to me: "If by chance yours should happen to turn over, as you do not know how to swim, on no account abandon it, but hold on to the little sticks that are in the middle, for we will save you easily." I assure you that those who have not seen or passed this place in these little boats that they have, could not pass it without great fear, even the most self-possessed persons in the world. But these people are so skillful in shooting these rapids that it is easy for them. I did it with them—a thing that I never had done, nor had any Christian, except my youth—and we came to our barks, where I lodged a large number of them.

There was a young man among us who decided to go with the Huron savages, who live about 180 leagues from the rapids; and he went with Savignon's brother, who was one of the captains, and he promised me to show him all that he could.

SAMUEL DE CHAMPLAIN

The next day⁷ a number of Algonquin savages came. They traded the little that they had, and made me a special gift of thirty beavers, for which I paid them. They begged me to continue in my good feeling toward them; which I promised to do. They talked to me very particularly in regard to some explorations in the north, which could be turned to use. And, in connection with this, they told me that if there was one of my companions who wished to go with them, they would show him something that I would be glad of, and that they would treat him like one of their children. I promised them to give them a young fellow,⁸ and they were very glad. When he left me to go with them I gave him a detailed memorandum of things that he ought to observe among them.

After they had traded the little that they had, they separated into three groups—one to go to war, one to go up by the rapids, and the other by way of a small stream, which empties into the great rapids—and they set out on the 18th day of this month,⁹ and we also.

⁷July 12. The next day after Pont Gravé started for Tadoussac. *Voyages of Champlain*, III, 31.

⁹July 18, 1611.

VOYAGES AND EXPLORATIONS

On the 19th I arrived at Quebec, where I decided to return to France, and I reached La Rochelle on the 11th of August.¹⁰

¹⁰According to the narrative of 1613 Champlain left Tadoussac Aug. 11 and reached La Rochelle Sept. 16. *Voyages of Champlain*, III, 34. Soon after his arrival in France Champlain nearly lost his life by a fall from a horse. For the further details of his stay there see vol. II, 43, ff.
